Preface	v
<i>Part I Introduction to SPSS and Data Entry</i>	<i>1</i>
1 Introduction	3
1.1 SPSS: history and development	3
1.2 The SPSS data analysis system	5
1.3 SPSS/PC+ and other software	6
1.4 Hardware requirements for SPSS/PC+ v. 5.0	6
1.5 What you should know about MS-DOS	7
2 The place of SPSS and Data Entry in research	9
2.1 The research process	9
2.2 Preparing a questionnaire	11
2.3 Collecting data	12
2.4 Creating the data file	12
2.5 Processing data	16
2.5.1 Processing variables	16
2.5.2 Processing cases	17
2.6 Analysing data	20
2.6.1 Levels of measurement	21
2.6.2 Describing a variable	23
2.6.3 Describing groups	25
2.6.4 Testing differences between two groups	26
2.6.5 Testing differences between more than two groups	26
2.6.6 Gaining insight into possible relationships	26
2.6.7 Testing relationships between two variables	27
2.6.8 Testing relationships between more than two variables	27
2.7 Interpretation of the analysis results	28
2.8 Writing the research report	28

3	From questionnaire to SPSS	31
3.1	Translating questions into variables	32
3.2	The codebook	34
3.2.1	The variable name	35
3.2.2	The variable description	35
3.2.3	The coding	35
3.2.4	Number of positions	36
3.2.5	An example	37
3.3	Typing in the data	39
4	Session 1 – Introduction to the use of SPSS	41
4.1	The start	41
4.2	Creating a data file	44
4.3	Defining variables	46
4.4	Entering data	49
4.5	Saving the data file	52
4.6	Exiting from Quick Edit	53
4.7	Listing the data entered	53
4.8	Exiting from SPSS	58
5	Session 2 – Analysing with SPSS	61
5.1	Retrieving the data file	61
5.2	Producing a frequency table	63
5.3	Labels for clarification of the output	66
5.4	A frequency table with descriptions	71
5.5	The SPSS files	72
5.6	Retrieving information about the variables	74
5.7	Writing the output to a separate file	77
6	Session 3 – Statistics and calculations	81
6.1	Executing a command file	81
6.2	A frequency table with bar chart and statistics	83
6.3	Scratchpad or command file?	86
6.4	Coding for missing values	86
6.5	Saving the system file within SPSS	90
6.6	The calculation of new variables	92
6.7	Executing a command from a series	96
6.8	The selection of cases	97
6.9	Working from the prompt	100
6.10	Some additional tips	102

PART II DATA ENTRY **107**

7 Computer-aided surveying **111**

8 Session 1 – Introduction to Data Entry **113**

8.1 Data Entry: the start	114
8.2 Entering a questionnaire	117
8.3 Defining variables	118
8.4 Joining variables and questions	121
8.5 Typing in the data	122
8.6 Saving a file	124
8.7 Exit from Data Entry	124
9 Session 2 – Creating input controls	125
9.1 Retrieving a file	125
9.2 Modifying entered data	126
9.3 Checking valid answers	126
9.4 Checking contradictory answers	129
9.5 Cleaning report for an entire file	130
10 Session 3 – Modifying the questionnaire and determining the routing	133
10.1 Copying the Dictionary	133
10.2 Modifying variable definitions	135
10.3 Modifying the position on the form	137
10.4 Determining the routing through the questionnaire	138
11 Session 4 – Value labels and extensive Skip & Fill rules	141
11.1 Value labels within Data Entry	141
11.2 Skip & Fill rules for range checking	143
11.3 Automatic recoding during data entry	145
12 Data Entry in a nutshell	151
12.1 Troubleshooting	151
12.2 Professional use	156
12.2.1 Protection	156
12.2.2 Help information for data entry	158
PART III Using SPSS	159
13 REVIEW – The SPSS editor	161
13.1 General description of REVIEW	161
13.2 File commands	163
13.3 Editing commands	164
13.4 Rounding within a table	166
13.5 Entering REVIEW	167
13.6 Naming the files	168

14 Reading data	171
14.1 Defining variables	171
14.2 Reading according to fixed format	173
14.3 Reading according to free format	175
14.4 Reading data from the command file	176
14.5 Missing values	176
14.6 Descriptions	177
14.7 Modifying variable definitions	181
15 System file	183
15.1 Creating a system file	184
15.2 Reading a system file	185
15.3 Requesting information about a system file	186
15.4 Joining two system files	187
15.4.1 Same variables, different cases	189
15.4.2 Different variables, same cases	191
15.4.3 Different variables, different cases	192
15.5 Aggregating cases	193
15.6 Transposing a data file	195
16 Transforming variables	199
16.1 RECODE to group values	199
16.2 AUTORECODE for automatic recoding	201
16.3 COMPUTE for unconditional computations	204
16.4 IF for conditional computations	207
16.5 COUNT to count values across variables	209
16.6 RANK to assign ranks	210
17 Transformation of cases	215
17.1 SELECT IF for permanent selections	216
17.2 PROCESS IF for temporary selections	217
17.3 N to select a number of cases	218
17.4 SAMPLE for random selections	219
17.5 SORT to sort cases	220
17.6 WEIGHT to weight cases	221
18 Summarizing the data	223
18.1 Producing frequency tables	223
18.1.1 The FORMAT subcommand	225
18.1.2 Histograms and barcharts	226
18.1.3 Percentiles	227
18.1.4 The STATISTICS of FREQUENCIES	227
18.1.5 Missing values	228
18.1.6 Examples of extended FREQUENCIES commands	229

18.2 Descriptive statistics: DESCRIPTIVES	232
18.2.1 The STATISTICS of DESCRIPTIVES	233
18.2.2 The OPTIONS of DESCRIPTIVES	234
18.3 The analysis of distributions: EXAMINE	234
18.3.1 Analysing single variables for groups of cases	238
18.3.2 The STATISTICS of EXAMINE	240
18.3.3 Frequency table with classification	240
18.3.4 Computing percentiles	241
18.3.5 The plots of EXAMINE	241
18.3.6 Estimation methods to determine the mean	241
19 Cross-tabulations	243
19.1 Producing simple cross-tabs	244
19.2 Determining the contents of a cell	246
19.3 Chi-square analysis	247
19.4 Cross-tabs for each group of cases	248
19.5 Cross-tabs with selected values	249
19.6 The STATISTICS of CROSSTABS	250
19.7 The appearance of a table	251
19.8 Missing values	251
19.9 Writing the contents of the table to a file	252
20 Describing groups and testing the differences	253
20.1 Describing groups: MEANS	253
20.1.1 Subgroups	255
20.1.2 The STATISTICS and OPTIONS of MEANS	256
20.2 Testing differences between groups: the T-TEST	257
20.2.1 The paired t-test	260
20.2.2 Missing values in T-TEST	262
21 Analysis of variance	265
21.1 One independent variable: ONEWAY	265
21.1.1 The STATISTICS of ONEWAY	267
21.1.2 The OPTIONS of ONEWAY	267
21.1.3 Other subcommands of ONEWAY	268
21.2 Two independent variables: ANOVA	269
21.2.1 Correcting for covariance	270
21.2.2 The STATISTICS of ANOVA	272
21.2.3 The OPTIONS of ANOVA	272
22 Scatterplots	273
22.1 Producing a scatterplot	273
22.2 A scatterplot of three variables	275
22.3 The values of a third variable on the scatterplot	277
22.4 The PLOT subcommands	279

23 Correlation and regression analysis	283
23.1 Correlation	283
23.1.1 The STATISTICS of CORRELATIONS	286
23.1.2 The OPTIONS of CORRELATIONS	286
23.2 Regression analysis	286
23.2.1 Methods of regression analysis	291
23.2.2 The regression equation	293
23.2.3 The DESCRIPTIVES subcommand	295
23.2.4 Residual analysis	295
23.2.5 The STATISTICS of REGRESSION	298
24 Non-parametric tests	301
24.1 The chi-square test	301
24.2 The Kolmogorov-Smirnov test	304
24.3 The sign test	306
24.4 The Mann-Whitney test	307
24.5 The Kruskal-Wallis test	308
25 Making reports	313
25.1 Producing a simple report	311
25.2 A comprehensive report	314
25.3 A second extension	315
26 Tailoring SPSS to your requirements	321
26.1 Customizing SPSS for your hardware	319
26.2 An automatically executed command file	322
26.3 Adjusting and printing the output	322
26.4 Determining the number of decimal places	324
26.5 Running other programs	325
27 Translating data files	327
27.1 Spreadsheets	328
27.2 Databases: dBase	330
27.3 Communication with SPSS-X and SAS	331
27.4 Translation from system file into ASCII file	333
Appendix 1 SPSS Menu Structure	335
Index	337
