How to Analyze Survey Data: Learning Objectives	viii
1. What Statistics Do for Surveys	1
Measurement Scales: Nominal, Ordinal, and Numerical	4
Nominal Scales	4
Ordinal Scales	5
Numerical (Interval and Ratio) Scales	7
Independent and Dependent Variables	9
Checklist for Choosing a Method to Analyze Survey Data	15
Descriptive Statistics and Measures of Central Tendency: Numerical and Ordinal Data	16
Mean	17
Median	18
Mode	19

Distributions: Skewed and Symmetric	21
Checklist for Using the Mean, Median, and Mode	22
Measures of Spread	22
Range	23
Standard Deviation	23
Percentile	26
Interquartile Range	26
Guidelines for Selecting Measures of Dispersion	27
Descriptive Statistics and Nominal Data	27
Proportion and Percentage	28
Ratio and Rate	29
 2. Relationships or Correlation	 31
Numerical Data	31
Calculating the Correlation Coefficient	34
Size of the Correlation	36
Ordinal Data and Correlation	38
Regression	39
A Note on the Relationship Between Two Nominal Characteristics	41
The Normal Distribution	42
Comparisons: Hypothesis Testing, p Values, and Confidence Levels	43
Guide to Hypothesis Testing, Statistical Significance, and p Values	45

3. Selecting Commonly Used Statistical Methods for Surveys	49
Reading Computer Output	53
Chi-Square	53
<i>t</i> Test	60
Analysis of Variance (ANOVA)	66
Practical Significance: Using Confidence Intervals	67
Proceed With Caution:	
Screening and Transforming Data	73
Coding for Data Analysis	74
Data Entry	77
The Codebook	77
 Exercises	 79
Answers	83
Suggested Readings	87
Glossary	89
