Preface	XI
A Introduction	1
1 Two Paths	3
<i>Stefan Schaltegger, WWZ, University of Basel</i>	
References	6
B Overarching Topics of LCA	9
2 System Boundaries	11
<i>Klaus Büchel, FAT Tünikon</i>	
2.1 Introduction	11
2.2 Choosing the System Boundaries	12
2.2.1 Basic Considerations	12
2.2.2 The Time Aspect-Period of Analysis	15
2.2.3 Space or Geographical Aspects	18
2.2.4 Subject Aspects	19
2.3 How to Proceed in Defining System Boundaries	20
2.3.1 Rules for the Definition of System Boundaries	20
2.3.2 System Boundary Definition in the Case Study «Beer Production»	22
References	24
3 Allocation of Environmental Interventions	27
<i>Christiane Maillefer, EMPA St. Gallen</i>	
3.1 Requirement for Allocation	27
3.2 Allocation Procedures	28
3.2.1 Products and Co-Products?	29
3.2.2 What Should Be Allocated?	29
3.2.3 Allocation Rules	30
3.3 Allocation for Different Process Types	32
3.3.1 Multi-Output Processes	32
3.3.2 Multi-Input Processes	33
3.3.3 Open-Loop Recycling	33
3.3.4 Special Cases	35
3.3.5 Case Study KOPO	35
3.4 Conclusions	36
References	37

4	Background Inventory Data	39
	<i>Martin Ménard, Rolf Frischknecht & Peter Zimmermann,</i> <i>ETH Zürich</i>	
4.1	Introduction	39
4.2	What Are Background Inventory Data and Why Are they Needed?	39
4.3	Requirements	42
4.3.1	What Are the Most Important Requirements for BID?	42
4.3.2	What Are the Requirements for Institutions Publishing BID?	43
4.4	BID Established by KOPÖ Projects	44
4.4.1	Agriculture	45
4.4.2	Food Products	46
4.4.3	Transport	46
4.4.4	Downstream	47
4.5	Conclusions	47
	References	49
5	Imprecision and Uncertainty in LCA	51
	<i>Christian Pohl, Matjaz Ros, Beate Waldeck & Fredy Dinkel,</i> <i>Carbotech Ltd. Basel</i>	
5.1	Introduction	51
5.2	Types of Imprecision and Uncertainties in LCA	52
5.2.1	Stochastic (Statistical) Errors	52
5.2.2	Exact Error Intervals	53
5.2.3	Vague Error Intervals (Fuzzy Intervals)	54
5.2.4	Systematic Errors	54
5.2.5	Intrinsically Vague Data (Intrinsic Fuzzy Data)	54
5.2.6	Missing Data	55
5.3	Sources of Imprecision in LCA	56
5.3.1	Inventory Analysis	56
5.3.2	Classification	58
5.3.3	Valuation	59
5.4	Handling of Imprecision and Uncertainty	62
5.4.1	Handling of Systematic Errors	62
5.4.2	Handling of Stochastic Errors	62
5.4.3	Handling of Error Intervals	63
5.4.4	Handling of Intrinsically Vague Data	64
5.5	Conclusions	66
	References	67

6 Relevant Environmental Interventions	69
<i>Arthur Braunschweig, IWÖ, HSG St. Gallen</i>	
6.1 Introductory Remarks	69
6.2 Basic Approaches for Selecting the «Relevant Interventions»	70
6.2.1 Issue Based	70
6.2.2 Legally Based	71
6.2.3 Based on the Relations Between Antropogenic and Geogenic Emission Flows	71
6.2.4 Based on Availability of Process Data	72
6.3 The Importance of the Assessment Method for Selecting the «Relevant» Interventions	72
6.4 How to By-Pass the Limits of an Assessment System	73
6.5 Practical Considerations for Dealing with Limited Resources: An Estimation Procedure	74
6.6 A Simple Example of the Estimation Procedure	75
6.7 Application of this Procedure as Cut-Off Criteria for Selecting the Relevant Processes	77
6.8 Outlook	78
References	78
7 The Software Tool EMIS	81
<i>Fredy Dinkel & Matjaz Ros, Carbotech Ltd. Basel</i>	
7.1 Software Tools Necessary	82
7.2 Requirements for LCA Software	82
7.2.1 Performance Requirements	83
7.2.2 System Requirements	86
7.3 The Software Chosen	87
7.3.1 Basic Functionality	87
7.3.2 Literature Database	88
7.3.3 Compilation of an LCA	89
7.3.4 Desirable Developments	89
7.4 Summary	90
References	91
C Case Study	93
8 Case Study «Feldschlösschen»	95
<i>Daniel Peter, INFRAS Zürich</i>	
8.1 Goal Definition	95
8.2 Inventory Analysis	96
8.2.1 System Boundaries	96

8.2.2	Allocation	98
8.2.3	Background Inventory Data	99
8.2.4	Data Quality	99
8.3	Impact Assessment	100
8.3.1	Environmental Scarcity Method (UBP-Method)	100
8.3.2	CML Method	104
8.4	Conclusions	106
	Appendix 1: Processes of the LCA «Feldschlösschen»	
	Beer	108
	Appendix 2: Inventory Table	111
	References	129

D Environmental Management of Production Sites 131

9 Eco-Efficiency of LCA. The Necessity of a Site-Specific Approach 133

Stefan Schaltegger, WWZ, University of Basel

9.1	Efficiency of Environmental Management Tools	133
9.2	The Ecological Leverage Effect	135
9.3	Eco-Efficiency of LCA	136
9.3.1	Recording, Uncertainty and Lack of Precision	136
9.3.2	Aggregation, Assessment and Other Problems	140
9.3.3	Inefficiency of the Present Approach of LCA	141
9.4	Possible Strategies to Improve the Present Approach of Life Cycle Assessment	142
9.5	Summary and Conclusions	146
	References	148

10 Managerial Eco-Controlling 151

Stefan Schaltegger, WWZ, University of Basel &

Andreas Sturm, Ellipson Ltd. Basel

10.1	The Concept of Eco-Controlling	151
10.2	Module 1: Formulation of Goals and Policies	153
10.3	Module 2: Information Management	155
10.3.1	Environmental Information	155
10.3.2	Financial and Environmentally-Induced Financial Information	157
10.4	Module 3: Decision Support	159
10.4.1	Assessment of Environmental Interventions	159
10.4.2	The Eco-Efficiency Portfolio	161
10.5	Module 4: Piloting and Implementation	163

10.6 Module 5: Communication	165
10.7 Conclusion and Outlook	165
References	166
E Conclusions	169
11 Summary and Conclusions	171
<i>Stefan Schaltegger, WWZ, University of Basel</i>	
References	174
Appendices	177
Appendix A: Publications of KOPÖ Research Groups	179
Appendix B: Authors	182
Abbreviations and Acronyms	183
Index	185
