|                                                                                                            |                                                                                          |     |
|------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|-----|
| 1. Two-Dimensional Nuclear Magnetic Resonance of Paramagnetic Metalloproteins                              | ANTÓNIO V. XAVIER,<br>DAVID L. TURNER, AND<br>HELENA SANTOS                              | 1   |
| 2. Cadmium-113 Nuclear Magnetic Resonance Applied to Metalloproteins                                       | JOSEPH E. COLEMAN                                                                        | 16  |
| 3. Lanthanide Shift Reagents                                                                               | CARLOS F. G. C. GERALDES                                                                 | 43  |
| 4. Alkali Metal Nuclear Magnetic Resonance                                                                 | DUARTE MOTA DE FREITAS                                                                   | 78  |
| 5. Calcium Nuclear Magnetic Resonance                                                                      | S. FORSÉN, C. JOHANSSON, AND<br>S. LINSE                                                 | 107 |
| 6. Pulsed Electron Nuclear Multiple Resonance Spectroscopic Methods for Metalloproteins and Metalloenzymes | HANS THOMANN AND<br>MARCELINO BERNARDO                                                   | 118 |
| 7. Continuous Wave Electron Nuclear Double Resonance Spectroscopy                                          | CHRISTOPHER J. BENDER AND<br>PHILIP AISEN                                                | 190 |
| 8. Vanadyl(IV) Electron Nuclear Double Resonance/ Electron Spin Echo Envelope Modulation Spin Probes       | N. DENNIS CHASTEEN                                                                       | 232 |
| 9. Multidimensional Nuclear Magnetic Resonance Methods to Probe Metal Environments in Proteins             | GERARD W. CANTERS,<br>CORNELIS W. HILBERS,<br>MART VAN DE KAMP,<br>AND SYBREN S. WUMENGA | 244 |
| 10. Optically Detected Magnetic Resonance of Triplet States in Proteins                                    | ARNOLD J. HOFF                                                                           | 290 |
| 11. Electron Paramagnetic Resonance                                                                        | JOHN R. PILBROW AND<br>GRAEME R. HANSON                                                  | 330 |
| 12. Electron Paramagnetic Resonance Spectroscopy of Iron Complexes and Iron-Containing Proteins            | RICHARD CAMMACK AND<br>CHRISTOPHER E. COOPER                                             | 353 |

|                                                                                            |                                                                                                                       |     |
|--------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|-----|
| 13. Intrinsic and Extrinsic Paramagnets as Probes of Metal Clusters                        | BRIAN J. HALES                                                                                                        | 384 |
| 14. Electron Paramagnetic Resonance Spectroelectrochemical Titration                       | KIM E. PAULSEN,<br>MARIAN T. STANKOVICH, AND<br>ALLEN M. ORVILLE                                                      | 396 |
| 15. Magnetic Susceptibility                                                                | CH. BUTZLAFF,<br>A. X. TRAUTWEIN, AND<br>H. WINKLER                                                                   | 412 |
| 16. Multifield Saturation Magnetization of Metalloproteins                                 | EDMUND P. DAY                                                                                                         | 437 |
| 17. Combining Mössbauer Spectroscopy with Integer Spin Electron Paramagnetic Resonance     | ECKARD MÜNCK,<br>KRISTENE K. SURERUS, AND<br>MICHAEL P. HENDRICH                                                      | 463 |
| 18. Voltammetric Studies of Redox-Active Centers in Metalloproteins Adsorbed on Electrodes | FRASER A. ARMSTRONG,<br>JULEA N. BUTT, AND<br>ARTUR SUCHETA                                                           | 479 |
| 19. Direct and Indirect Electrochemical Investigations of Metalloenzymes                   | H. ALLEN O. HILL AND<br>NICHOLAS I. HUNT                                                                              | 501 |
| 20. Pulse Radiolysis                                                                       | G. ARTHUR SALMON AND<br>A. GEOFFREY SYKES                                                                             | 522 |
| 21. Physical Methods to Locate Metal Atoms in Biological Systems                           | MICHEL THELLIER,<br>CAMILLE RIPOLL,<br>CARMEN QUINTANA,<br>FRANÇOISE SOMMER,<br>PIERRE CHEVALLIER, AND<br>JACK DAINTY | 535 |
| AUTHOR INDEX . . . . .                                                                     |                                                                                                                       | 587 |
| SUBJECT INDEX . . . . .                                                                    |                                                                                                                       | 612 |
