Appendix A: The statistical analysis used to predict children's return outcomes	245
Appendix B: Making assessments of the quality	255
of relationships between the members of the families of children in care	
Index.....	260

List of tables

3.1	Proportion of placements with parents meeting stated aims	28
5.1	Data on the return experience in the three data sets used in Study A	53
6.1	The destination of children who left care but did not return	68
6.2	The primary reason for early returners coming into care	69
6.3	The family structure of the 199 early returners going back to an unchanged household	71
6.4	The patterns of movement of the 48 early returners going back to a changed household	71
6.5	The patterns of movement of 22 long-term returners going back to a changed household composition	78
7.1	The success of early returns; children leaving care compared with children placed home while in care	84
7.2	Groups vulnerable to return problems	87
7.3	Principal reasons given for the short-term breakdowns' return	91
8.1	Factors associated with care and protection children moving on after reunion	114
8.2	Factors associated with a positive outcome for the care and protection children	114
8.3	Factors associated with children beyond control moving on after reunion	116
8.4	Factors associated with a positive outcome for children beyond control	116
9.1	The distribution of cases selected for participation in the intensive study	123
14.1	The long-term outcome for the 20 children who returned by the type of return case	203
15.1	The actual outcome for the 31 children participating in the intensive study compared with predicted outcome	208

A1	The relationship between variables associated with return home to relatives within six months of separation	246
A2	Log-linear multi-analysis of variables associated with early return	248
A3	The relationship between variables associated with return home to relatives seven to 24 months after separation	249
A4	Log-linear multi-variate analysis of variables associated with return between seven and 24 months after separation	250
A5	The relationship between variables associated with return home to relatives between 25 and 60 months after separation	250
A6	Log-linear multi-variate analysis of variables associated with return between 25 and 60 months after separation	251
A7	The relationship between variables associated with a positive outcome for protected children placed at home on trial	252
A8	Log-linear multi-variate analysis of variables associated with a positive outcome for the care and protection children	253
A9	The relationship between variables associated with a positive outcome for disaffected children placed home on trial	254
A10	Log-linear multi-variate analysis of variables associated with a positive outcome for disaffected children placed home on trial	254

List of figures

Figure 1	Number of children returning in different time periods	65
Figure 2	Proportion of children returning who also leave care in different time periods	66
Figure 3	The career routes of the 247 children returning home..... within six months of coming into care	73
Figure 4	The estimated number of long-term care graduates who go home, seek independence from a home-base or experience a further breakdown in relations with relatives	88
