

CONTENTS

Foreword	v
Preface	vii

Part I: Early human evolution

Recent African origin of human mitochondrial DNA:	
Review of the evidence and current status of the hypothesis	1
<i>Mark Stoneking</i>	
Lines of descent from mitochondrial Eve:	
An evolutionary look at coalescence	15
<i>Rosalind M. Harding</i>	
Phylogeography of human mtDNA: An Amerindian perspective	33
<i>R.H. Ward</i>	
Population structure and modern human origins	55
<i>Alan R. Rogers</i>	
Distribution of pairwise differences in growing populations	81
<i>Gunter Weiss, Andreas Henking, and Arndt von Haeseler</i>	
Branching and inference in population genetics	97
<i>Neil O'Connell</i>	
Human demography and the time since mitochondrial Eve	107
<i>Paul Marjoram and Peter Donnelly</i>	

Part II: Molecular techniques and data analysis

Molecular population genetics of a phenotypically monomorphic protein in <i>Drosophila</i>	133
<i>Stephen W. Schaeffer</i>	
Estimation of the amount of DNA polymorphism and statistical tests of the neutral mutation hypothesis based on DNA polymorphism	149
<i>Fumio Tajima</i>	
Computational methods for the coalescent	165
<i>Robert C. Griffiths and Simon Tavaré</i>	

Applications of Metropolis-Hastings genealogy sampling	183
<i>Mary K. Kuhner, Jon Yamato, and Joseph Felsenstein</i>	
Estimating selection and mutation rates from a random field model for polymorphic sites	193
<i>Stanley A. Sawyer</i>	
The use of linkage disequilibrium for estimating the recombination fraction between a marker and a disease gene	207
<i>N.L. Kaplan and B.S. Weir</i>	
Theory and applications of RAPD-PCR: Mispriming	221
<i>Andrew G. Clark</i>	
 Part III: Genealogy and population models	
The structured coalescent	231
<i>Hilde M. Herbots</i>	
An ancestral recombination graph	257
<i>Robert C. Griffiths and Paul Marjoram</i>	
The effect of purifying selection on genealogies	271
<i>G. Brian Golding</i>	
Hierarchical and mean-field stepping stone models	287
<i>D.A. Dawson</i>	
A note on the stepping stone model with extinction and recolonization	299
<i>Claudia Neuhauser, Stephen M. Krone, and Hyun-Chung Kang</i>	
On the normal-selection model	309
<i>S.N. Ethier</i>	
Branching processes and evolution	321
<i>Ziad Taib</i>
