Preface	xi
1 Introduction	1
1.1 Preliminaries	1
1.2 Types of investigation	1
1.3 Types of variable	3
1.4 Interaction	8
1.5 Purposes of analysis	10
1.6 Nature of models	11
1.6.1 Some simple models	11
1.6.2 Types of model	14
1.6.3 Broad aspects of models	15
1.7 Examination of data quality	17
1.8 Criteria for models	18
1.9 Model selection and development	20
1.9.1 General issues	20
1.9.2 Default analysis	20
1.10 Bibliographic notes	22
2 Aspects of interpretation	25
2.1 Preliminaries	25
2.2 Some terminology	27
2.3 Types of graph	30
2.4 Some more specialized properties	36
2.4.1 General remarks	36
2.4.2 Some Markov properties	36
2.4.3 Relation between concentration and covariance graphs	37

2.4.4	Derivation of concentration and covariance graphs	38
2.4.5	Markov property of joint-response chain graphs	39
2.4.6	Decomposability of independence hypotheses	41
2.4.7	Equivalence of independence structures in joint-response chain graphs	42
2.5	Hidden variables	43
2.6	A general formulation	44
2.7	Interpretation of regression coefficients	45
2.8	Nonspecific variables and the ecological issue	49
2.9	Complex nature of variability	51
2.10	Examination of the adequacy of models	52
2.11	Some complications	55
2.12	Causality	57
2.13	Bibliographic notes	58
3	Technical considerations	61
3.1	Preliminaries	61
3.2	Covariance matrix	61
3.2.1	Some definitions	61
3.2.2	Linear least-squares regression	63
3.3	Multivariate normal distribution	67
3.4	Concentration matrix	68
3.5	Special matrices	71
3.6	Binary data	73
3.7	Multivariate binary data	78
3.8	Nominal variables	81
3.9	Ordinal variables	83
3.10	Mixed variables	86
3.11	A special kind of continuous data	88
3.12	Bibliographic notes	91
4	Statistical analysis	93
4.1	Preliminaries	93
4.2	Method of least squares	93
4.2.1	Formulation	93
4.2.2	Least-squares estimates	95
4.2.3	Properties of estimates	95
4.2.4	Testing model adequacy	97
4.2.5	Weighted and generalized least squares	98

4.2.6	Multivariate linear model	100
4.3	Maximum likelihood analysis	102
4.3.1	Introduction	102
4.3.2	Description of method	102
4.3.3	Some special cases	105
4.3.4	Likelihood ratio tests and profile likelihood	110
4.3.5	Calculation of maximum likelihood estimates	111
4.3.6	Some difficulties	113
4.4	Testing model adequacy	115
4.5	Presentation of regression analyses	115
4.6	Bibliographic notes	121
5	Special methods for joint responses	123
5.1	Preliminaries	123
5.2	Joint-response regression: some saturated models	124
5.3	Two nondecomposable independence hypotheses	128
5.3.1	Preliminaries	128
5.3.2	Seemingly unrelated regressions	129
5.3.3	Covariance selection model	130
5.3.4	Binary variables	131
5.4	Analysis of joint-response chain models	133
5.5	Bibliographic notes	133
6	Some specific applications	135
6.1	Preliminaries	135
6.2	Glucose control	135
6.3	Determinants of university drop-out	142
6.4	Disturbances in child development	151
6.5	Treatment of chronic pain	161
6.6	Bibliographic notes	169
7	Some strategical aspects	171
7.1	Preliminaries	171
7.2	Phases of analysis	172
7.3	An outline strategy	173
7.4	Role of parsimony	176
7.5	More formal issues	177
7.5.1	General remarks	177
7.5.2	Predicting the results of fitting other models	178
7.6	Formal techniques	179
7.7	Significance tests compared with other criteria	180

7.8	Tests of goodness of fit	181
7.9	Multiple use of tests	181
7.10	Conclusion	182
7.11	Bibliographic notes	183
8	Some more specialized topics	185
8.1	Preliminaries	185
8.2	Derived variables	185
8.3	Hidden variables	190
8.4	Linear structural equations	194
8.5	Implications of generating processes	196
8.5.1	Preliminaries	196
8.5.2	Some distributional aspects	198
8.5.3	Simple correlation-inducing paths	200
8.5.4	Induced covariance and concentration graphs	202
8.5.5	Simple summary graphs	204
8.5.6	Derivation of general summary graph	207
8.5.7	Explanations for induced edges	212
8.5.8	Criteria for induced relations in summary graphs	214
8.5.9	Reduction of summary graph	215
8.6	Missing values	218
8.7	Causality	219
8.8	Bibliographic notes	227
	Appendix	229
	References	231
	List of figures	239
	List of tables	243
	Author index	245
	Subject index	248
