Occupational Hand Disorders between the Wars	58
Low Reporting of Occupational Hand Disorders, 1920–1980	64
The History of Carpal Tunnel Syndrome	66
Interest in Occupational Hand Disorders during the 1970s	77
The Impact of Labor Activism during the 1980s	82
Popularization of the Term <i>Cumulative Trauma Disorders</i>	88
Repetition Strain Injuries: The Australian Experience	91
Summary	94

3 Back Pain 102

Early History	104
Earliest Reports of Occupational Etiology	105
Railway Spine	107
Inattention to Railway Spine among Workers	113
The Inception of Workers' Compensation	119
Medical Reporting of Occupational Back Pain, 1880–1915	121
Social Class and the Problem of Malingering	130
The Introduction of X-Ray Technologies	134
The Ruptured Disc Model of Mixter and Barr	136
The Liberalization of Occupational Disease Compensation	143
Social Legislation and the Depression	147
The Growth of Orthopedics As a Specialization	149
Summary	153

4 Noise-Induced Hearing Loss 160

Historical Background	162
The Measurement of Hearing Ability	178

“Classical” Hearing Tests	179
Audiometric Testing	180
Psychogenic Deafness and Malingering	191
Noise Control Methods	194
Community Response to Environmental Noise Exposure	199
The Emergence of Workers’ Compensation for NIHL	203
Explaining the Sudden Growth of Claims after World War II	208
Reaction to the Rise of Compensation Claims	213
Summary	223

5 Conclusion 229

Findings	230
New Technologies	232
Financial Compensation	234
Labor Activism	236
Economic Instability	238
Environmental Concerns	239
Gender and Cultural Stereotyping	240
Medical Specialization	243
Media Attention	245
Marketing Efforts	247
Military Conflicts	249
Political Action	250
Economic Costs	252
Implications for Policymaking	253
Challenging the Notion of Occupational Disease	256

Appendixes 259

I. Summary of Findings	259
II. Consolidated Summary of Findings	271
