1	Introduction	1
	<i>Uwe Engel and Jost Reinecke</i>	
1.1	Panel Data Analysis	3
1.2	Complicating Factors	4
1.2.1	<i>Measurement Error</i>	4
1.2.2	<i>Missing Data</i>	5
1.2.3	<i>Heterogeneous Populations</i>	6
1.2.4	<i>Causal Inference</i>	8
1.3	Modeling Complicated Panel Data	9
2	Models for the Analysis of Categorically-Scored Panel Data	15
	<i>Allan L. McCutcheon</i>	
2.1	Introduction	15
2.2	Analysis of Turnover Tables for Manifest Variables	17
2.2.1	<i>Independence and Quasi-independence</i>	18
2.2.2	<i>Symmetry, Quasi-symmetry, and Marginal Homogeneity</i>	18
2.2.3	<i>Distance and Diagonal Models</i>	21
2.3	The Analysis of Turnover Tables as Latent Variables	22
2.4	Models for Multi-Wave Panels	26
2.5	Conclusion	32
3	Causal Log-Linear Modeling with Latent Variables and Missing Data	35
	<i>Jeroen Vermunt</i>	
3.1	Introduction	35
3.2	Log-linear Path Models	36
3.2.1	<i>Probability Structure</i>	37
3.2.2	<i>Logit Models for Probabilities</i>	38
3.2.3	<i>Estimation</i>	40
3.3	Log-linear Models with Latent Variables	41
3.3.1	<i>Latent Class Models</i>	41
3.3.2	<i>Modified LISREL Models</i>	42
3.3.3	<i>Estimation</i>	42
3.4	Log-linear Models for Nonresponse	44
3.4.1	<i>Fuchs' Approach</i>	45
3.4.2	<i>Fay's Approach</i>	46
3.4.3	<i>Ignorable Versus Nonignorable Response Mechanisms</i>	47
3.4.4	<i>Estimation</i>	48
3.5	Application	49

3.5.1	<i>Using Only Complete Cases</i>	50
3.5.2	<i>Fuchs' Procedure for Nonresponse</i>	53
3.5.3	<i>Models for Patterns of Nonresponse</i>	54
3.6	Discussion	57
4	The Analysis of Panel Data with Nonmetric Variables: Probit Models and a Heckman Correction for Selectivity Bias <i>Gerhard Arminger</i>	61
4.1	Introduction	61
4.2	Model Specification	62
4.2.1	<i>Heckman's Model for Dichotomous Variables</i>	62
4.2.2	<i>Extension to General Threshold Models</i>	64
4.3	Estimation Method	67
4.3.1	<i>Sequential Marginal ML Estimation under Strict Exogeneity</i>	67
4.3.2	<i>ML Estimation for a Model with State Dependence and Unobserved Heterogeneity</i>	70
4.3.3	<i>The Problem of Initial States</i>	71
4.4	Random Effect Models under Sample Selection Bias	74
4.4.1	<i>Metric Response Variables</i>	74
4.4.2	<i>Non-metric Response Variables</i>	78
4.5	Analysis of Production Output from German Business Test Data	79
5	Linear Panel Analysis of Ordinal Data Using LISREL: Reality or Science Fiction? <i>Steffen Kühnel</i>	87
5.1	Introduction	87
5.2	Linear Panel Models	88
5.3	Coping with Ordinality in Linear Models	92
5.4	A Simulation Study	99
5.5	Results	102
5.6	Conclusions	110
6	Continuous-Time Dynamic Models for Panel Data <i>Hermann Singer</i>	113
6.1	Introduction	113
6.2	Stochastic Differential Equations	114
6.3	ML Estimation of Linear State Space Models	115
6.4	EM Algorithm	118
6.5	Examples	119
6.5.1	<i>Irregularly Sampled AR(2) Process</i>	119
6.5.2	<i>Learned Helplessness as a Dynamical System</i>	121

6.6	Systems with Multiplicative Noise Terms	123
6.7	Nonlinear Systems	125
6.8	Conclusion	130
7	Nonstationary Longitudinal LISREL Model Estimation from Incomplete Panel Data Using EM and the Kalman Smoother <i>Johan H.L. Oud and Robert A.R.G. Jansen</i>	135
7.1	Introduction	135
7.2	Advantages of EM	136
7.3	From State Space Model to LISREL Model	139
7.4	Expressing Σ in Terms of the Kalman Smoother	144
7.5	Applying the EM Algorithm	147
7.6	Educational Research Example	150
7.7	Discussion	157
8	Model Specification and Missing Value Treatment in Panel Data: Testing the Theory of Planned Behavior in a Three-wave Panel Study <i>Jost Reinecke and Peter Schmidt</i>	161
8.1	Introduction and Overview	161
8.2	Methods for Dealing With Incomplete Longitudinal Data	163
8.3	Substantive Model, Sampling and Measurement Instruments	172
8.4	Structure of Missing Values	175
8.5	Results of the Structural Equation Models	179
8.6	Summary and Conclusion	186
9	Multilevel Models for Longitudinal Data <i>Min Yang and Harvey Goldstein</i>	191
9.1	Introduction	191
9.2	Two-level Growth Models	192
9.2.1	<i>An Example Using Growth Data</i>	192
9.2.2	<i>A Basic Two-level Model for Change over Time</i>	194
9.2.3	<i>Parameter Estimation Procedure - Iterative Generali- sed Least Squares</i>	195
9.2.4	<i>Hypothesis Tests on Parameters</i>	196
9.2.5	<i>Residuals</i>	197
9.2.6	<i>Example</i>	197
9.3	Three-level Models	206
9.3.1	<i>An Example of Higher Level Repeated Measures Data</i>	206
9.3.2	<i>A Variance Component Model and Complex Level 1 Variance</i>	208
9.3.3	<i>Random Coefficients at Higher Levels</i>	215
9.4	Multilevel Time Series Models	217

9.5	Discussion	219
10	Structural Analysis in the Study of Social Change <i>Uwe Engel and Wolfgang Meyer</i>	221
10.1	Introduction	221
10.2	The Effects of Social Structure	221
10.3	Structural Analysis of Social Change	227
10.4	Handling Missing Data	237
10.5	Illustrating Example: The Conflict-preventing Function of Social Structure	246
11	Latent Difference Models as Alternatives to Modeling Residuals of Cross-lagged Effects <i>Kai Schnabel</i>	253
11.1	Introduction	253
11.2	Residual Score as a Measure of Change	254
11.3	The "Fate" of the Change-pretest Covariance in Autoregres- sive Models	257
11.4	Why be Aware of the Covariance?	261
11.5	What are the Consequences of this Argumentation?	262
11.6	Analysing Change in Structural Equation Models	265
11.7	Discussion and Practical Recommendations	274
11.8	What does the Residual Correlation mean?	276
12	Specification Choices in Longitudinal Stability Estimation: The Case of Values and Macrosocial Stress <i>Klaus Boehnke</i>	279
12.1	Introduction	279
12.2	Methods	282
12.3	Results	283
12.4	Summary and Discussion	290
	Contributors	295
