

1. Measures of Risk: Rates and Probabilities, 3

Rates, 4

Average Rate, 5

Probabilities, 7

Incidence and Prevalence, 9

Survival Probability and Hazard Rate, 13

Statistical Properties of Probabilities Calculated from
Mortality or Disease Data, 16

Analysis of Rates: Smoothing, Transforming,
and Adjustment, 23

Smoothing, 24

Logistic Transformation, 29

Age Adjustment of Rates, 33

2. Variation and Bias, 41

A Simple Model, 42

t-Test, 44

Test-Direction Bias, 49

Selection Bias, 50

Misclassification Bias: Specificity and Sensitivity, 51

Comparison of *k* Groups, 56

Interaction Contrast, 61

Two-Way Analysis, 65

Crossover Design, 71

Crossover Design: Carryover Effect, 75

Confounder Bias: A Basic Description, 77

Ecologic Bias, 79

3. **Statistical Power and Sample Size Calculations, 83**
 - Technical Details, 83
 - Normal Distribution: Sample Mean, 86
 - Poisson Distribution: Relative Risk, 87
 - Sample Size: One-Sample Test of a Proportion, 90
 - Sample Size: Two-Sample Test of Proportions, 91
 - Loss of Statistical Power and Bias from Grouping Continuous Data, 95
 - Sample Size: Estimation, 100
4. **Cohort Data: Description and Illustration, 103**
 - Cohort Effect: Model, 104
 - Description of a Two-Way Table, 109
 - Mean Polish, 111
 - Cohort Effect: Prostatic Cancer (Applied Example), 117
5. **Clustering: Space and Time Data, 127**
 - Poisson Model, 128
 - Nearest Neighbor, 131
 - Transformed Maps, 136
 - Time/Space Analysis, 143
 - Permutation Tests, 148
 - Time/Space: Permutation Test, 152
 - Jackknife Estimation, 155
 - Applied Example, 157
6. **The Two $\times$ K Contingency Table and the Two $\times$ Two $\times$ Two Table, 161**
 - The Two $\times$ K Contingency Table, 161
 - Independence and Homogeneity, 163
 - Regression, 166
 - Two-Sample: Comparison of Two Means, 171
 - Ridit Analysis, 174
 - The Two $\times$ Two $\times$ Two Contingency Table, 181
 - Complete Independence, 181

Partial Independence,	183
Conditional Independence,	185
Confounder Bias in a Two $\times$ Two $\times$ Two Table,	187
Examples,	188
Interaction,	189
 7. The Analysis of Contingency Table Data: Logistic Model I,	 197
The Simplest Case,	199
The Two $\times$ Two $\times$ Two Table,	205
The Two $\times$ K Table,	214
The Two $\times$ Two $\times$ K Table,	220
The Multi-Way Table,	229
Summarizing a Series of Two $\times$ Two Tables,	234
Test of Homogeneity,	235
Test of Association,	237
Estimation of a Common Odds Ratio,	238
Logistic Regression Approach,	239
 8. The Analysis of Binary Data: Logistic Model II,	 243
Simple Logistic Regression,	243
The Bivariate Logistic Regression,	247
“Centering”,	256
The WCGS Additive Model,	260
Confounder Bias in the WCGS Data,	262
Case/Control Sampling,	267
 9. The Analysis of Matched Data,	 271
Sampling Example,	272
Stratification/Post-Stratification,	275
Matching Analysis: A Continuous Variable,	277
One Control for Each Case,	277
Two Controls for Each Case,	279
Matched Pairs Data: Binary Data,	280
Confidence Interval for the Odds Ratio,	285

Evaluating the Observed Odds Ratio,	287
Controlling for an Additional Variable in a Matched Design,	289
Disregarding Matching,	290
Interaction with the Matching Variable,	292
Matching Using More Than One Control,	294
Conditional Logistic Analysis,	298
Conditional Logistic Regression Model for the Two $\times$ Two Case,	299
Bivariate Conditional Logistic Analysis of Matched Pairs Data,	302
Logistic Model—Interactions with the Matching Variable,	304
Logistic Models with Continuous Variables,	305
Additive Logistic Model,	308

10. Life Tables: An Introduction, 311

Complete, Current Life Table: Construction,	312
Life Table Survival Curve,	325
Life Table Hazard Function,	326
Life Tables: Three Applications of Life Table Techniques,	331
Life Table Methods for Calculating a Survival Probability from Follow-Up Data,	331
Life Table Measures of Specific Causes of Death,	339
Multiple-Cause Life Table,	339
Lifetime Probability of Death,	346
Competing Risks,	347

11. Estimates of Risk from Follow-Up Data, 357

Parametric Model,	357
Age Adjustment of Rates,	360
Censored and Truncated Data,	362
Mean Survival Time: Parametric Estimate,	364
Mean Survival Time: Nonparametric Estimate,	367
Mean Survival Time from Censored Data,	371
Goodness-of-Fit,	374
Two-Sample Data,	378
Evaluation of Two-Sample Data,	381
The Wilcoxon Test and the Gehan Generalization,	386

12. A Model for Survival Data: Proportional Hazards Model, 391

Simplest Case, 392

AML Example, 395

General Case, 397

Two Properties of Proportional Hazards Survival Curves, 399

Proportional Hazards Model: Application I, 400

Proportional Hazards Model: Application II, 403

Proportional Hazards Model: Application III, 406

Ratios of Hazard Functions from the Proportional Hazards Model, 412

Proportional Hazards Model: Application IV, 414

Dependence on Follow-Up Time, 418

Odds Ratio Model, 419

Western Collaborative Group Study Data, 421

Appendixes, 423

A. Description of the WCGS Data Set, 423

B. Binomial and Poisson Distributions, 425

C. The Odds Ratio and Its Properties, 428

D. Partitioning the Chi-Square Statistic, 433

E. Maximum Likelihood Estimation, 436

Problems, 443

Bibliography, 453

Index, 461
