## *PART I: Data and Information*

|                                                   |          |
|---------------------------------------------------|----------|
| <b>Chapter 1: Introduction and Overview .....</b> | <b>3</b> |
| 1. Introduction .....                             | 3        |
| 2. Diagnostic-Therapeutic Cycle.....              | 4        |
| 2.1 Observation .....                             | 5        |
| 2.2 Diagnosis .....                               | 6        |
| 2.3 Therapy .....                                 | 7        |
| 3. Information Processing .....                   | 7        |
| 3.1 Support of Human Thinking.....                | 8        |
| 3.2 Developments in Health Care .....             | 9        |
| 3.3 Parallels .....                               | 9        |
| 4. Systematization of Computer Applications ..... | 10       |
| 5. Concluding Remarks .....                       | 16       |

**Table of Contents**

---

**Chapter 2: Information and Communication .....19**

- 1. Introduction .....19
- 2. Sender, Channel, and Receiver .....19
- 3. Perception and Transducers .....24
- 4. Aspects of Information .....25
  - 4.1 Syntactic Aspect .....26
  - 4.2 Semantic Aspect .....26
  - 4.3 Pragmatic Aspect .....26
  - 4.4 Mathematical Definition of Information.....27
- 5. Information Entropy .....30
- 6. Data in Computers .....31
  - 6.1 Completeness .....32
  - 6.2 Accuracy .....32
  - 6.3 Precision .....33
  - 6.4 Coding .....33
  - 6.5 Free Text .....33
  - 6.6 Conclusions .....34
- Panel 1 Information .....27*
- Panel 2 Information Content of DNA .....28*
- Panel 3 Information Content of a Biological Signal.....29*

***PART II: Data in Computers***

**Chapter 3: Data Processing .....37**

- 1. Introduction .....37
- 2. The Information Processing System .....37
  - 2.1 The User .....38
  - 2.2 Data Entry .....39
  - 2.3 User Interface .....40
  - 2.4 Data Processing .....41
  - 2.5 Data Presentation.....43
- 3. The Hardware .....44
  - 3.1 The Central Processing Unit .....44
  - 3.2 Computer Memory .....46
  - 3.3 Peripherals.....46
- 4. The Software .....50
  - 4.1 The Operating System .....50
  - 4.2 User Programs .....52
- Panel 1 Multi-user, Multi-processing, Time Sharing .....45*
- Panel 2 Object-oriented Programming .....51*

|                                                                       |           |
|-----------------------------------------------------------------------|-----------|
| <b>Chapter 4: Database Management .....</b>                           | <b>53</b> |
| 1. Introduction .....                                                 | 53        |
| 1.1 Data Structure in Paper-Based Patient Records .....               | 54        |
| 1.2 Data Structure in Computers .....                                 | 54        |
| 1.3 The DBMS for Data Structuring .....                               | 54        |
| 2. DBMS Functions.....                                                | 55        |
| 2.1 Data Modeling .....                                               | 55        |
| 2.2 Data Control .....                                                | 57        |
| 3. Physical Data Storage.....                                         | 58        |
| 3.1 File Cabinet .....                                                | 58        |
| 3.2 Computer Storage .....                                            | 59        |
| 4. DBMS Modeling.....                                                 | 60        |
| 4.1 Relational Data Model .....                                       | 60        |
| 4.2 Hierarchical Data Model .....                                     | 62        |
| 4.3 Network Data Model .....                                          | 65        |
| 4.4 Index Structures .....                                            | 65        |
| 4.5 Future Database Structures.....                                   | 66        |
| <i>Panel 1 Main Tasks of a DBMS .....</i>                             | <i>56</i> |
| <i>Panel 2 SQL .....</i>                                              | <i>61</i> |
| <i>Panel 3 Conceptual Schema of a Relational Database .....</i>       | <i>62</i> |
| <i>Panel 4 Object-oriented Database Management Systems .....</i>      | <i>63</i> |
| <b>Chapter 5: Telecommunication, Networking and Integration .....</b> | <b>67</b> |
| 1. Introduction .....                                                 | 67        |
| 2. Communication in Health Care .....                                 | 67        |
| 2.1 Fax .....                                                         | 68        |
| 2.2 E-Mail.....                                                       | 68        |
| 2.3 EDI .....                                                         | 70        |
| 3. Shared Care Protocols .....                                        | 72        |
| 4. Communication Hardware.....                                        | 72        |
| 4.1 Public Telephone Network.....                                     | 72        |
| 4.2 Digital Networks .....                                            | 73        |
| 5. Communication Software.....                                        | 74        |
| 5.1 Addressing and Routing .....                                      | 75        |
| 5.2 Reliability of Communication.....                                 | 75        |
| 5.3 Authentication and Security .....                                 | 75        |
| 5.4 Clients and Servers.....                                          | 75        |
| 6. Internet.....                                                      | 77        |
| <i>Panel 1 Health Care Message Protocol MEDEUR .....</i>              | <i>69</i> |
| <i>Panel 2 Message Protocol in HL-7 .....</i>                         | <i>71</i> |
| <i>Panel 3 LANs and WANS .....</i>                                    | <i>74</i> |
| <i>Panel 4 TCP/IP.....</i>                                            | <i>74</i> |
| <i>Panel 5 World Wide Web .....</i>                                   | <i>76</i> |

Table of Contents

---

*PART III: Data from Patients*

**Chapter 6: Coding and Classification.....81**

- 1. Introduction .....81
- 2. Classifications .....82
  - 2.1 Ordering Principles .....83
  - 2.2 Nomenclatures and Thesauri .....84
  - 2.3 Codes.....84
  - 2.4 Taxonomy .....86
  - 2.5 Nosology .....86
- 3. History of Classification .....87
- 4. Classification and Coding Problems.....88
  - 4.1 Classification Problems .....88
  - 4.2 Coding Problems .....88
- 5. Classification Systems .....89
  - 5.1 ICD – International Classification of Diseases .....89
  - 5.2 ICPC – International Classification of Primary Care .....90
  - 5.3 DSM – Diagnostic and Statistical Manual for Mental Disorders .....91
  - 5.4 SNOMED – Systematized Nomenclature of Human and Veterinary Medicine .....91
  - 5.5 ICD-O – International Classification of Diseases for Oncology .....92
  - 5.6 CPT – Current Procedural Terminology .....93
  - 5.7 ICPM – International Classification of Procedures in Medicine .....93
  - 5.8 RCC – Read Clinical Classification .....93
  - 5.9 ATC – Anatomic Therapeutic Chemical Code .....94
  - 5.10 MeSH – Medical Subject Headings .....95
  - 5.11 DRG – Diagnosis Related Groups .....95
- 6. Current Developments .....96
- 7. Conclusion.....98

*Panel 1 Reasons for Storing Medical Data in a Computer.....82*

*Panel 2 Requirements for a Classification.....83*

*Panel 3 Unified Medical Language System (UMLS) .....96*

**Chapter 7: The Patient Record .....99**

- 1. Introduction .....99
- 2. History of the Patient Record .....99
- 3. The Present-Day Medical Record.....102
- 4. The Computer-based Patient Record .....104
  - 4.1 Primary Care .....106
  - 4.2 Specialty Care .....106
- 5. Data Entry .....107
  - 5.1 Natural Language Processing.....107
  - 5.2 Structured Data Entry.....109
  - 5.3 Forms for Data Entry .....109
  - 5.4 Dynamic SDE .....109
  - 5.5 Interfaces for SDE.....110

|                   |                                                                           |            |
|-------------------|---------------------------------------------------------------------------|------------|
| 5.6               | User-Adaptive SDE .....                                                   | 112        |
| 6.                | Coding and Standardization .....                                          | 112        |
| 6.1               | Exchangeability of Patient Data and Coded Data .....                      | 112        |
| 6.2               | Noncontextual Data .....                                                  | 112        |
| 7.                | Representation of Time .....                                              | 113        |
| 8.                | Clinical Use of the CPR .....                                             | 114        |
| 8.1               | Other Uses of the CPR .....                                               | 115        |
| 8.2               | Multimedia Patient Records .....                                          | 115        |
|                   | <i>Panel 1 Hippocrates Describes a Disease .....</i>                      | <i>100</i> |
|                   | <i>Panel 2 Time-Oriented Medical Record .....</i>                         | <i>101</i> |
|                   | <i>Panel 3 Source-Oriented Medical Record .....</i>                       | <i>102</i> |
|                   | <i>Panel 4 Problem-oriented Medical Record .....</i>                      | <i>103</i> |
|                   | <i>Panel 5 Speech Recognition for Reporting of Medical Findings .....</i> | <i>110</i> |
| <b>Chapter 8:</b> | <b>Biosignal Analysis .....</b>                                           | <b>117</b> |
| 1.                | Introduction .....                                                        | 117        |
| 2.                | Characteristics of Biosignals .....                                       | 118        |
| 3.                | Types of Signals .....                                                    | 119        |
| 3.1               | Deterministic Waveforms .....                                             | 119        |
| 3.2               | Stochastic Waveforms .....                                                | 120        |
| 4.                | Analog-to-Digital Conversion .....                                        | 120        |
| 4.1               | How often? .....                                                          | 122        |
| 4.2               | How accurate? .....                                                       | 123        |
| 5.                | Application Areas of Biosignal Analysis .....                             | 124        |
|                   | <i>Panel 1 Sampling of Signals: How Often? .....</i>                      | <i>121</i> |
|                   | <i>Panel 2 Sampling of Signals: How Accurate? .....</i>                   | <i>122</i> |
| <b>Chapter 9:</b> | <b>Medical Imaging .....</b>                                              | <b>127</b> |
| 1.                | Introduction .....                                                        | 127        |
| 2.                | Ultrasound .....                                                          | 128        |
| 2.1               | A-mode .....                                                              | 128        |
| 2.2               | M-mode and B-mode .....                                                   | 128        |
| 2.3               | C-scan .....                                                              | 130        |
| 2.4               | Sector Scan .....                                                         | 130        |
| 2.5               | Doppler Effect .....                                                      | 130        |
| 2.6               | Advantages of Ultrasound .....                                            | 131        |
| 3.                | Radiology .....                                                           | 131        |
| 3.1               | Imaging by Means of X rays .....                                          | 131        |
| 3.2               | Principles of DSA .....                                                   | 132        |
| 3.3               | Computed Tomography .....                                                 | 133        |
| 3.4               | Principles of MRI .....                                                   | 137        |
| 4.                | Nuclear Medicine .....                                                    | 140        |
| 4.1               | The Gamma Camera .....                                                    | 142        |
| 4.2               | Histogram Mode .....                                                      | 143        |
| 4.3               | List Mode .....                                                           | 143        |
| 4.4               | Synchronized Recordings .....                                             | 144        |

| 4.5                                                          | Processing of Scintigrams.....                          | 145        |
| 4.6                                                          | Three-Dimensional Reconstructions (SPECT and PET) ..... | 145        |
| 4.7                                                          | Functional MRI .....                                    | 145        |
| <i>Panel 1 Principle of Echo Scanners.....</i>               |                                                         | <i>129</i> |
| <i>Panel 2 Principle of Computed Tomography.....</i>         |                                                         | <i>135</i> |
| <i>Panel 3 Principle of Magnetic Resonance Imaging .....</i> |                                                         | <i>140</i> |

## **Chapter 10: Image Processing and Analysis .....147**

|      |                                                     |     |
|------|-----------------------------------------------------|-----|
| 1.   | Introduction .....                                  | 147 |
| 2.   | Goals of Image Processing .....                     | 148 |
| 2.1  | Visualization .....                                 | 148 |
| 2.2  | Automation .....                                    | 148 |
| 2.3  | Quantification .....                                | 149 |
| 3.   | Issues in Image Processing and Image Analysis ..... | 149 |
| 3.1  | Image Acquisition and Sampling .....                | 149 |
| 3.2  | Grey-Level Quantization .....                       | 150 |
| 3.3  | Image Restoration .....                             | 151 |
| 3.4  | Image Enhancement .....                             | 151 |
| 3.5  | Edge or Contour Detection .....                     | 151 |
| 3.6  | Image Segmentation .....                            | 152 |
| 3.7  | Measurements in Images .....                        | 152 |
| 3.8  | Image Compression .....                             | 153 |
| 3.9  | Image Registration .....                            | 153 |
| 3.10 | Visualization .....                                 | 153 |
| 3.11 | Picture Archiving .....                             | 154 |
| 4.   | Image Transformations .....                         | 154 |
| 4.1  | Global Transformations .....                        | 154 |
| 4.2  | Local Image Transformations .....                   | 154 |
| 5.   | Modern Trends in Image Processing.....              | 155 |

## *PART IV: Patient-Centered Information Systems*

## **Chapter 11: Primary Care .....159**

|     |                                                                             |     |
|-----|-----------------------------------------------------------------------------|-----|
| 1.  | Introduction .....                                                          | 159 |
| 2.  | Primary Care and Shared Care.....                                           | 159 |
| 3.  | History of Primary Care Information Systems.....                            | 161 |
| 3.1 | Gatekeepers in Primary Care .....                                           | 162 |
| 3.2 | Introducing Systems in Primary Care Information: the Dutch Experience ..... | 162 |
| 3.3 | Introduction of Information Systems in Primary care .....                   | 163 |
| 4.  | Functionality of Primary Care Information Systems .....                     | 165 |
| 4.1 | Basic Module.....                                                           | 165 |
| 4.2 | Medical Module .....                                                        | 165 |
| 4.3 | Pharmacy Module .....                                                       | 167 |
| 4.4 | Scheduling Module .....                                                     | 167 |

|                                                                                 |                            |            |
|---------------------------------------------------------------------------------|----------------------------|------------|
| 4.5                                                                             | Financial Module .....     | 167        |
| 4.6                                                                             | Communication Module ..... | 167        |
| 4.7                                                                             | Research Module .....      | 168        |
| 5.                                                                              | Developments .....         | 170        |
| <i>Panel 1 Diabetes Mellitus .....</i>                                          |                            | <i>160</i> |
| <i>Panel 2 Shared Care for Patients with Benign Prostatic Hyperplasia .....</i> |                            | <i>169</i> |

## **Chapter 12: Clinical Departmental Systems.....171**

|                                                          |                                                                |            |
|----------------------------------------------------------|----------------------------------------------------------------|------------|
| 1.                                                       | Introduction .....                                             | 171        |
| 2.                                                       | Internal Medicine .....                                        | 172        |
| 2.1                                                      | Oncology .....                                                 | 172        |
| 2.2                                                      | Nephrology .....                                               | 173        |
| 2.3                                                      | Endocrinology – diabetes .....                                 | 174        |
| 2.4                                                      | Hematology – hemophilia .....                                  | 174        |
| 2.5                                                      | Intestinal Endoscopy.....                                      | 175        |
| 2.6                                                      | Organ Transplants .....                                        | 176        |
| 3.                                                       | Cardiology .....                                               | 176        |
| 3.1                                                      | Electrocardiography .....                                      | 177        |
| 3.2                                                      | Coronary Angiography .....                                     | 177        |
| 3.3                                                      | Cardiac Scintigraphy .....                                     | 177        |
| 3.4                                                      | Echocardiography .....                                         | 178        |
| 3.5                                                      | CPRs in Cardiology .....                                       | 178        |
| 4.                                                       | Neurology .....                                                | 178        |
| 5.                                                       | Pediatrics .....                                               | 179        |

## ***PART V: Medical Knowledge and Decision Support***

|                                                                                  |            |
|----------------------------------------------------------------------------------|------------|
| <b>Chapter 15: Methods for Decision Support .....</b>                            | <b>233</b> |
| 1. Introduction .....                                                            | 233        |
| 2. The Forms of Medical Knowledge .....                                          | 234        |
| 2.1 Two Types of Knowledge .....                                                 | 234        |
| 2.2 Brains versus Computers .....                                                | 235        |
| 3. Learning by Humans and Machines .....                                         | 236        |
| 3.1 Features .....                                                               | 236        |
| 3.2 Supervised Learning .....                                                    | 238        |
| 3.3 Unsupervised Learning .....                                                  | 238        |
| 4. Decision-Support Models .....                                                 | 239        |
| 4.1 Quantitative Decision-Support Methods .....                                  | 240        |
| 4.1.1 One Feature: Single Decision Threshold .....                               | 240        |
| 4.1.2 Receiver Operating Characteristics .....                                   | 242        |
| 4.1.3 Performance of Decision Models .....                                       | 243        |
| 4.1.4 Cost and Risks .....                                                       | 244        |
| 4.1.5 Bayes' Rule .....                                                          | 244        |
| 4.1.6 Multiple Features .....                                                    | 246        |
| 4.1.7 Multiple Diseases .....                                                    | 246        |
| 4.2 Qualitative Decision-Support Methods .....                                   | 247        |
| 4.2.1 Decision Tables .....                                                      | 248        |
| 4.2.2 Flowcharts .....                                                           | 249        |
| 4.2.3 Rule-Based Reasoning .....                                                 | 251        |
| 4.2.4 Other Elements of Symbolic Reasoning .....                                 | 254        |
| 4.2.5 Knowledge Structuring .....                                                | 254        |
| 4.2.6 Knowledge-Based Systems .....                                              | 254        |
| 4.2.7 Explanation Support .....                                                  | 254        |
| 5. Acceptance of Decision-Support Systems .....                                  | 255        |
| 5.1 Legal and Ethical Aspects of Computer-Assisted Decision Support System ..... | 258        |
| <i>Panel 1 Computers, Grandmasters and Clinicians .....</i>                      | <i>235</i> |
| <i>Panel 2 Bayes' Rule .....</i>                                                 | <i>245</i> |
| <i>Panel 3 Flowchart of a Diagnostic Process .....</i>                           | <i>252</i> |
| <i>Panel 4 Validation of Decision-Support Systems .....</i>                      | <i>256</i> |
| <b>Chapter 16: Clinical Decision-Support Systems .....</b>                       | <b>261</b> |
| 1. Introduction .....                                                            | 261        |
| 1.1 History of Systems .....                                                     | 261        |
| 1.2 Types of Systems .....                                                       | 261        |
| 2. Definition of Clinical Decision-Support Systems .....                         | 262        |
| 3. Influence of Decision-Support Systems .....                                   | 263        |
| 3.1 Abdominal Pain .....                                                         | 263        |
| 3.2 Patient Outcome .....                                                        | 263        |
| 4. Categories of Systems .....                                                   | 264        |
| 4.1 Solicited Advice .....                                                       | 264        |

## Table of Contents

---

|                                                |                             |     |
|------------------------------------------------|-----------------------------|-----|
| 4.1.1                                          | Characteristics .....       | 264 |
| 4.1.2                                          | Example: QMR.....           | 264 |
| 4.2                                            | Unsolicited Advice .....    | 271 |
| 4.2.1                                          | Characteristics .....       | 272 |
| 4.2.2                                          | Example: Arden Syntax ..... | 273 |
| 4.3                                            | Autonomous Systems .....    | 273 |
| 5.                                             | Current Trends .....        | 275 |
| <i>Panel 1 Diagnosing Diseases in QMR.....</i> |                             | 270 |
| <i>Panel 2 Rules in the Arden Syntax .....</i> |                             | 274 |

## **Chapter 17: Strategies for Medical Knowledge Acquisition .....277**

|                                                               |                                                                          |     |
|---------------------------------------------------------------|--------------------------------------------------------------------------|-----|

| 5.6                                                           | Knowledge Base Maintenance.....                                          | 288 |
| 6.                                                            | Delivery of Medical Knowledge Bases for Clinical Use .....               | 289 |
| 7.                                                            | Evaluation of Medical Knowledge Bases .....                              | 291 |
| 8.                                                            | Conclusion.....                                                          | 291 |
| <i>Panel 1 TEIRESIAS.....</i>                                 |                                                                          | 285 |
| <i>Panel 2 OPAL .....</i>                                     |                                                                          | 286 |
| <i>Panel 3 PROTÉGÉ-I.....</i>                                 |                                                                          | 287 |
| <i>Panel 4 INTERNIST-I/QMR .....</i>                          |                                                                          | 288 |
| <i>Panel 5 Interauthor Agreement on KB Construction .....</i> |                                                                          | 290 |

|                                                                                                            |            |
|------------------------------------------------------------------------------------------------------------|------------|
| <b>Chapter 18: Predictive Tools for Clinical Decision Support .....</b>                                    | <b>293</b> |
| 1. Introduction .....                                                                                      | 293        |
| 2. Development of Predictive Tools .....                                                                   | 293        |
| 3. Decision Support with Simple Predictive Tools .....                                                     | 295        |
| 3.1 Prediction Rules Based on Statistical Analysis .....                                                   | 295        |
| 3.1.1 Selection of Variables .....                                                                         | 296        |
| 3.1.2 Estimation of Regression Coefficients .....                                                          | 296        |
| 3.1.3 Evaluation of Model Performance.....                                                                 | 296        |
| 3.1.4 Presentation of Results Model.....                                                                   | 296        |
| 3.2 Tools Based on Decision Analysis .....                                                                 | 304        |
| 4. Evaluation and Conclusions .....                                                                        | 304        |
| <i>Panel 1 Prediction of Histology as a Predictor in the Decision to Resect in Testicular Cancer .....</i> | <i>297</i> |
| <i>Panel 2 Prediction of Spontaneous Pregnancy Chances in Fertility Medicine .....</i>                     | <i>300</i> |
| <i>Panel 3 Prediction of Survival Time in the Decision to Replace a Risky Heart Valve .....</i>            | <i>302</i> |

## ***PART VI: Institutional Information Systems***

|                                                                                            |            |
|--------------------------------------------------------------------------------------------|------------|
| <b>Chapter 19: Modeling of Health Care for Information Systems Development ....</b>        | <b>309</b> |
| 1. Introduction .....                                                                      | 309        |
| 2. Public Health and Health Care.....                                                      | 309        |
| 2.1 Public Health .....                                                                    | 309        |
| 2.2 Conceptual Model of Public Health.....                                                 | 310        |
| 2.3 Health Care .....                                                                      | 312        |
| 3. Models for Information System Development.....                                          | 316        |
| 3.1 Nolan's Growth Model.....                                                              | 316        |
| 3.2 Cascade Model for System Development.....                                              | 318        |
| 3.3 Business Modeling .....                                                                | 318        |
| 3.4 Modeling Clinical Practice.....                                                        | 319        |
| 3.5 Modeling Public Health Surveillance.....                                               | 320        |
| 3.6 Reference Models in Health Care .....                                                  | 320        |
| 3.6.1 Common Basic Specification .....                                                     | 321        |
| 3.6.2 Orders and Acts .....                                                                | 322        |
| 3.6.3 Hospital Information Model .....                                                     | 322        |
| 3.7 Development of Reference Models .....                                                  | 324        |
| 3.8 Application of Reference Models .....                                                  | 326        |
| 4. Information Requirements Determination.....                                             | 326        |
| 4.1 Essential Issues in IRD .....                                                          | 326        |
| 4.2 IRD in Health Care.....                                                                | 327        |
| <i>Panel 1 Health Status .....</i>                                                         | <i>313</i> |
| <i>Panel 2 Determinants, Health Policy, Health Care, and Autonomous Developments .....</i> | <i>314</i> |
| <i>Panel 3 Example of Activities, Information Needs and Relations in the HIM .....</i>     | <i>323</i> |

## Chapter 20: Hospital Information Systems: Clinical Use .....331

|                                                                    |     |
|--------------------------------------------------------------------|-----|
| 1. Introduction .....                                              | 331 |
| 2. The Historic Development of Hospital Information Systems .....  | 331 |
| 2.1 Admission and Discharge .....                                  | 332 |
| 2.2 Order Entry .....                                              | 332 |
| 2.3 Results Review.....                                            | 332 |
| 2.4 Stand-Alone Applications .....                                 | 333 |
| 2.5 Storage Facilities .....                                       | 333 |
| 3. Advanced Clinical Information Systems.....                      | 333 |
| 3.1 Policy and Technology Change .....                             | 334 |
| 3.2 Today's Hospital Systems Environment .....                     | 335 |
| 3.3 Technical Aspects of Current Hospital Information Systems..... | 338 |
| 4. The Future of Hospital Information Systems.....                 | 341 |

## Chapter 21: Hospital Information Systems: Technical Choices .....343

|                                                 |     |
|-------------------------------------------------|-----|
| 1. Introduction .....                           | 343 |
| 2. The HIS Concept .....                        | 346 |
| 3. Architectures of an HIS .....                | 348 |
| 3.1 Isolated Applications .....                 | 349 |
| 3.2. Monolithic Systems .....                   | 349 |
| 3.3 Evolutionary Systems-Type I.....            | 349 |
| 3.4 Evolutionary Systems-Type II .....          | 349 |
| 3.5 Composable Systems .....                    | 350 |
| 4. Integration between HIS applications.....    | 351 |
| 4.1 Standards for Message Exchange .....        | 351 |
| 4.2 Integration and the Multivendor Aspect..... | 352 |
| 5. Operational HISs .....                       | 352 |
| 5.1 Hiscom HIS .....                            | 352 |
| 5.2 Diogene HIS .....                           | 353 |
| 6. Accessibility and Data Protection .....      | 354 |
| 7. Management Control .....                     | 355 |
| 8. Trends .....                                 | 355 |
| 8.1 Support of Patient Care .....               | 356 |
| 8.2 Workstations and Bedside Terminals .....    | 356 |

|                                                                                |            |
|--------------------------------------------------------------------------------|------------|
| <i>Panel 21.1 The Role of an HIS in Clinical Epidemiological Research.....</i> | <i>344</i> |
|--------------------------------------------------------------------------------|------------|

## Chapter 22: Health Information Resources .....357

|                                              |     |
|----------------------------------------------|-----|
| 1. Introduction .....                        | 357 |
| 2. HIR Characteristics and Features .....    | 358 |
| 2.1 System Characteristics .....             | 358 |
| 2.2 Data Acquisition .....                   | 358 |
| 2.3 Data Storage .....                       | 359 |
| 2.4 Geographical Information Systems .....   | 360 |
| 2.5 Data Warehouses.....                     | 362 |
| 2.6 Data Analysis and Retrieval .....        | 363 |
| 3. Health Information Resource Domains ..... | 363 |

|            |                                                            |     |
|------------|------------------------------------------------------------|-----|
| 3.1        | Health Information Networks.....                           | 363 |
| 3.2        | Public Health Information Resources .....                  | 365 |
| 3.3        | Administrative Systems.....                                | 365 |
| 3.4        | Registries .....                                           | 368 |
| 3.5        | Health Surveillance and Vigilance .....                    | 370 |
| 3.6        | Organ, Tissue, and Blood Banks.....                        | 371 |
| 4.         | Summary and Trends .....                                   | 371 |
| Panel 22.1 | Standards Applicable to Health Information Resources ..... | 359 |
| Panel 22.2 | Examples of Projects using a GIS.....                      | 361 |
| Panel 22.3 | Data Mining and Knowledge Discovery in Databases.....      | 362 |
| Panel 22.4 | Media and Electronic Publishing Formats .....              | 364 |
| Panel 22.5 | Electronically Available Information Resources .....       | 366 |
| Panel 22.6 | The Chemical Abstracts Service Registry .....              | 367 |
| Panel 22.7 | Home Care Systems Using Handheld Computers .....           | 368 |

## ***PART VII: Methodology for Information Processing***

|                                                                     |            |
|---------------------------------------------------------------------|------------|
| <b>Chapter 23: Logical Operations .....</b>                         | <b>375</b> |
| 1. Introduction .....                                               | 375        |
| 2. Logical Operations and Truth Tables .....                        | 375        |
| 2.1 The Venn diagram .....                                          | 376        |
| 2.2 Logical Operators.....                                          | 376        |
| 2.3 Logical expressions .....                                       | 377        |
| 3. Boolean Algebra and Karnaugh Diagrams .....                      | 380        |
| 4. Binary Numbers and Logic.....                                    | 384        |
| Panel 1 Basic Boolean Operations .....                              | 379        |
| Panel 2 Example of De Morgan's Law.....                             | 381        |
| Panel 3 Example of a Karnaugh Diagram .....                         | 382        |
| Panel 4 Transformations from Decimal to Binary and Vice Versa ..... | 383        |
| Panel 5 Binary Addition and Subtraction.....                        | 384        |

|                                                                                 |            |
|---------------------------------------------------------------------------------|------------|
| <b>Chapter 24: Biostatistical Methods .....</b>                                 | <b>387</b> |
| 1. Introduction .....                                                           | 387        |
| 2. Data Description .....                                                       | 388        |
| 2.1 Qualitative Data.....                                                       | 388        |
| 2.2 Continuous Data .....                                                       | 390        |
| 3. Estimation of Parameters and Hypothesis Testing .....                        | 391        |
| 3.1 Hypothesis Testing .....                                                    | 392        |
| 3.2 Parameter Estimation .....                                                  | 393        |
| 4. Multivariate Analysis .....                                                  | 396        |
| 5. Biostatistical Aspects Design of Experiments and Observational Studies ..... | 396        |
| 5.1 Controlled Clinical Trials .....                                            | 396        |
| 5.2 Non-randomized Approaches .....                                             | 396        |

**Chapter 25: Biosignal Processing Methods .....399**

- 1. Signal-Amplitude Properties .....399
  - 1.1 First-Order Amplitude-Density Distributions .....399
  - 1.2 Second-Order Amplitude-Density Distributions.....400
    - 1.2.1 Deterministic Signals: Sines and Cosines .....400
    - 1.2.2 Deterministic Signals: ECGs .....402
    - 1.2.3 Stochastic Signals and Point Processes.....403
  - 1.3 Correlation.....404
- 2. Frequency Spectra and Filtering.....404
  - 2.1 Fourier Transform.....404
  - 2.2 Filtering .....407
- 3. Signal-to-Noise Ratio .....408
  - 3.1 Coherent Averaging .....409
- 4. Signal Detection.....409
  - 4.1 Detection of QRS Complexes in an ECG.....410
  - 4.2 Impulse Series plus Disturbance .....411
  - 4.3 Conclusions Regarding Detection .....411
- Panel 1 One-Dimensional Distributions, Means and Variances .....401*
- Panel 2 Two-Dimensional Distributions and Correlation .....403*
- Panel 3 Wavelet Analysis .....406*
- Panel 4 Coherent Averaging .....408*

**Chapter 26: Advances in Image Processing .....413**

- 1. Introduction .....413
- 2. Two-Dimensional Medical Image Processing: Preprocessing .....416
  - 2.1 Computer Vision Versus Human Vision .....416
  - 2.2 Feature Extraction .....416
  - 2.3 Boundary Detection.....416
  - 2.4 Image Filtering.....417
  - 2.5 Image Processing Strategies .....417
  - 2.6 Vision-Based Methods .....418
  - 2.7 Image Compression .....418
  - 2.8 Interpretation of Compressed Images.....418
- 3. Three-Dimensional Medical Image Processing .....419
  - 3.1 Three-Dimensional Reconstruction .....419
  - 3.2 Image Transformations .....419
  - 3.3 Validation of Image Processing .....420
  - 3.3 General versus Special Solutions.....420
  - 3.4 Incorporating Domain Knowledge.....420
- 4. Medical Image Processing and Informatics Implications .....421
  - 4.1 Image Databases .....421
  - 4.2 Visible Humans Project .....421
- Panel 1 The Visible Humans Project.....415*

|                                                                        |            |
|------------------------------------------------------------------------|------------|
| <b>Chapter 27: Pattern Recognition .....</b>                           | <b>423</b> |
| 1. Introduction .....                                                  | 423        |
| 2. Syntactic Pattern Recognition .....                                 | 424        |
| 3. Statistical Pattern Recognition .....                               | 424        |
| 3.1 Supervised Pattern Recognition .....                               | 425        |
| 3.2 Unsupervised Methods .....                                         | 427        |
| 4. Design of a Pattern Recognition Application .....                   | 429        |
| 5. Modern Developments .....                                           | 429        |
| <b>Chapter 28: Modeling for Decision Support .....</b>                 | <b>431</b> |
| 1. Introduction .....                                                  | 431        |
| 2. A Broad View of Decision Support .....                              | 432        |
| 3. Rule-Based Systems .....                                            | 432        |
| 4. Abstraction Beyond the Rules .....                                  | 434        |
| 5. The Knowledge-Level Hypothesis .....                                | 436        |
| 6. KADS .....                                                          | 438        |
| 7. Reusable Problem-Solving Methods .....                              | 439        |
| 8. Reusable Ontologies .....                                           | 442        |
| 9. Modern Architectures for Decision Support .....                     | 444        |
| 10. Summary .....                                                      | 447        |
| <b>Chapter 29: Structuring the Computer-based Patient Record .....</b> | <b>449</b> |
| 1. Introduction .....                                                  | 449        |
| 2. Four Levels .....                                                   | 449        |
| 3. Generic Structure of CPRs .....                                     | 450        |
| 3.1 Structuring CPR Data .....                                         | 450        |
| 3.1.1 Events .....                                                     | 451        |
| 3.1.2 Relationships .....                                              | 451        |
| 3.1.3 Views .....                                                      | 452        |
| 3.1.4 Reliability .....                                                | 453        |
| 3.2 Temporal Aspects of CPRs .....                                     | 453        |
| 3.3 Models for CPR Data Representation .....                           | 454        |
| 3.4 Data Entry .....                                                   | 455        |
| 3.4.1 Natural Language Processing .....                                | 455        |
| 3.4.2 Structured Data Entry .....                                      | 455        |
| 3.4.3 Patient-driven Data Entry .....                                  | 456        |
| 4. Realization of CPR Systems .....                                    | 456        |
| 4.1 CPR systems in Primary Care .....                                  | 456        |
| 4.2 CPR Systems in Hospitals .....                                     | 458        |
| 4.2.1 Platforms for CPRs .....                                         | 458        |
| 4.2.2 Structure of Clinical CPRs .....                                 | 458        |
| 5. Use of CPR Data .....                                               | 459        |
| 5.1 Decision Support .....                                             | 459        |
| 5.2 Quality Assessment .....                                           | 459        |
| 5.3 Clinicians' Responsibilities .....                                 | 460        |
| 6. Final Remarks .....                                                 | 461        |

**Chapter 30: Evaluation of Clinical Information Systems .....463**

- 1. Introduction .....463
  - 1.1 Why Evaluate? .....463
  - 1.2 Subjectivist and Objectivist Approaches to Evaluation .....463
  - 1.3 The Range of Evaluation Techniques .....464
  - 1.4 General Framework for an Objectivistic Evaluation Study.....464
- 2. Planning and Executing an Objectivistic Evaluation Study.....464
  - 2.1 Defining and Prioritizing Study Questions.....464
  - 2.2 Defining the “System” to be Studied .....465
  - 2.3 Selecting or Developing Reliable, Valid Measurement Methods .....466
  - 2.4 Designing the Demonstration Study .....466
    - 2.4.1 Descriptive, Correlational, and Comparative Studies .....466
    - 2.4.2 Eliminating Potential Bias.....468
    - 2.4.3 Ensuring that Study Findings can be Generalized .....468
  - 2.5 Carrying out the Study .....468
  - 2.6 Analyzing and Reporting Study Results .....469
- 3. Conclusions .....469

*PART VIII: Methodology for Information Systems*

**Chapter 31: Human-Computer Interaction in Health Care.....473**

- 1. Introduction .....473
- 2. Cognitive Aspects of Human-Computer Interfacing .....474
  - 2.1 Why Consider Psychology? .....474
  - 2.2 Cognitive Frameworks for HCI.....475
  - 2.3 Resources in Human Information Processing.....476
  - 2.4 Expertise, Skilled Performance, and Learning .....476
  - 2.5 Perception and Attention .....477
  - 2.6 Recent Approaches to Cognition and HCI.....477
  - 2.7 Usability .....478
- 3. Technological Aspects of Human-Computer Interfacing .....478
  - 3.1 Interaction Style.....479
    - 3.1.1 Command Languages and Character-Based Interfaces .....479
    - 3.1.2 Graphical Manipulation .....480
  - 3.2 Principles for the Display of Information .....481
  - 3.3 Data Entry .....483
- 4. Emerging Technologies in Medical-Computer User Interfaces .....484
  - 4.1 Visualization of Medical Data .....484
  - 4.2 Multimedia .....484
  - 4.3 Hypertext and Hypermedia .....485
  - 4.4 Advances in Pen-Based Input .....486
  - 4.5 Advances in Speech Recognition.....486
  - 4.6 User Interfaces to the Internet .....486
  - 4.7 Cooperative Work Environments .....487

|     |                                                                |     |
|-----|----------------------------------------------------------------|-----|
| 4.8 | Customizable and Adaptive User Interfaces .....                | 487 |
| 5.  | Methods for the Design and Evaluation of User Interfaces ..... | 488 |
| 5.1 | Stages in the Development of User Interfaces .....             | 488 |
| 5.2 | Advances in User Interface Evaluation .....                    | 490 |
| 6.  | Principles for the Design of Health Care User Interfaces ..... | 492 |
| 7.  | Conclusions .....                                              | 493 |

## **Chapter 32: Costs and Benefits of Information Systems.....495**

|     |                                          |     |
|-----|------------------------------------------|-----|
| 1.  | Introduction .....                       | 495 |
| 2.  | Costs of information systems .....       | 495 |
| 2.1 | Hardware Costs .....                     | 496 |
| 2.2 | Costs of Consumables .....               | 496 |
| 2.3 | Software Costs .....                     | 496 |
| 2.4 | Personnel Costs .....                    | 496 |
| 2.5 | Costs for Housing.....                   | 497 |
| 2.6 | Overhead Costs .....                     | 497 |
| 3.  | Benefits of Information Systems .....    | 497 |
| 3.1 | Nonquantifiable Benefits .....           | 497 |
| 3.2 | Quantifiable, Nonmonetary Benefits ..... | 498 |
| 3.3 | Quantifiable, Monetary Benefits.....     | 498 |
| 4.  | Evaluation of Information Systems .....  | 499 |
| 5.  | Example .....                            | 500 |

## **Chapter 33: Security in Medical Information Systems .....503**

|     |                                                     |     |
|-----|-----------------------------------------------------|-----|
| 1.  | Introduction .....                                  | 503 |
| 2.  | The Scenario for Data Protection .....              | 504 |
| 3.  | Policy with respect to Data Security.....           | 504 |
| 3.1 | Rules for Data Security.....                        | 505 |
| 3.2 | Confidentiality .....                               | 505 |
| 3.3 | Privacy Regulation .....                            | 505 |
| 4.  | Threats .....                                       | 506 |
| 4.1 | Threats to Confidentiality .....                    | 506 |
| 4.2 | Threats to Data Integrity and Availability .....    | 506 |
| 5.  | Measures .....                                      | 509 |
| 6.  | Choice of Measures to be Taken.....                 | 509 |
| 6.1 | Identify the Threats.....                           | 509 |
| 6.2 | Estimating the Chances of an Incident .....         | 509 |
| 6.3 | Estimating the Expected Damage .....                | 510 |
| 6.4 | Probability of Occurrence and Expected Damage ..... | 510 |
| 6.5 | List the Considered Measures.....                   | 510 |
| 6.6 | Estimate the Costs of Each Measure .....            | 510 |
| 6.7 | Group the Measures.....                             | 510 |
| 6.8 | Relationships between Threats and Measures .....    | 510 |
| 6.9 | Select Measures .....                               | 511 |
| 7.  | Introduction of the Measures .....                  | 511 |
| 8.  | Responsibility for Data Security .....              | 511 |

## Table of Contents

---

|                                                 |     |
|-------------------------------------------------|-----|
| 9. Legislation and Regulation .....             | 512 |
| Panel 1 Protection of Information Systems ..... | 507 |
| Panel 2 Seismed Guidelines .....                | 511 |

## **Chapter 34: Standards in Health Care Informatics and Telematics in Europe .....513**

|                                                                                |     |
|--------------------------------------------------------------------------------|-----|
| 1. Introduction .....                                                          | 513 |
| 2. Telematics Requirements in Health Care .....                                | 513 |
| 3. Definitions .....                                                           | 515 |
| 3.1 Standardization .....                                                      | 515 |
| 3.2 Telematics and Electronic Data Interchange .....                           | 516 |
| 4. Benefits and Role of CEN.....                                               | 516 |
| 4.1 Benefits .....                                                             | 516 |
| 4.2 CEN .....                                                                  | 517 |
| 5. Description of Present European Standards .....                             | 518 |
| 5.1 The Medical Informatics Vocabulary .....                                   | 518 |
| 5.2 The Health Care Information Framework.....                                 | 518 |
| 5.3 The Electronic Health Care Record Architecture .....                       | 518 |
| 5.4 The Standard Architecture for Health Care Information Systems .....        | 519 |
| 5.5 Classification and Coding .....                                            | 519 |
| 5.5.1 Nomenclature, Classification, and Coding for Clinical Laboratories ..... | 519 |
| 5.5.2 Classification and Coding of Surgical Procedures .....                   | 519 |
| 5.5.3 Structure of Concept Systems, Vocabulary .....                           | 519 |
| 5.5.4 Coding Systems for Drugs .....                                           | 520 |
| 5.5.5 Coding Systems for Medical Devices .....                                 | 520 |
| 5.6 Standards.....                                                             | 520 |
| 5.6.1 Standards for Quantities in Clinical Sciences.....                       | 520 |
| 5.6.2 Time Standards.....                                                      | 520 |
| 5.7 Data Interchange .....                                                     | 520 |
| 5.7.1 Syntaxes for Data Interchange .....                                      | 520 |
| 5.7.2 Registration of Coding Schemes.....                                      | 521 |
| 5.7.3 Exchange of Laboratory Information.....                                  | 521 |
| 5.7.4 Registration of the Data Sets used in EDI .....                          | 521 |
| 5.7.5 Messages for Diagnostic Services.....                                    | 521 |
| 5.7.6 Messages for Exchange of Health Care Administrative Data .....           | 522 |
| 5.7.7 Messages for Patient Referral and Discharge .....                        | 522 |
| 5.7.8 Methodology for the Development of Health Care Messages .....            | 522 |
| 5.8 Images.....                                                                | 523 |
| 5.8.1 Imaging and Related Data Interchange Formats .....                       | 523 |
| 5.8.2 Medical Image Management Standard .....                                  | 523 |
| 5.8.3 HIS, RIS, and PACS .....                                                 | 523 |
| 5.8.4 Media Interchange of Medical Images .....                                | 523 |
| 5.9 Biosignals.....                                                            | 523 |
| 5.9.1 Computerized ECG Interchange.....                                        | 523 |
| 5.9.2 Vital Signs Information Representation.....                              | 524 |
| 5.10 Security .....                                                            | 524 |
| 5.10.1 User Identification, Authentication, Security .....                     | 524 |

|                                             |                                                       |            |
|---------------------------------------------|-------------------------------------------------------|------------|
| 5.10.2                                      | Security for Health Care Information Systems.....     | 524        |
| 5.10.3                                      | Digital Signature Services .....                      | 524        |
| 5.10.4                                      | Intermittently Connected Devices.....                 | 525        |
| <b>Chapter 35: Project Management .....</b> |                                                       | <b>527</b> |
| 1.                                          | Introduction .....                                    | 527        |
| 2.                                          | Information Systems and Projects .....                | 527        |
| 3.                                          | Functions in an EDP Project .....                     | 528        |
| 4.                                          | Cooperation between EDP Professionals and Users ..... | 529        |
| 5.                                          | Development of an Information System .....            | 529        |
| 6.                                          | Problems during an EDP project.....                   | 531        |
| 6.1                                         | Problems with the Design .....                        | 532        |
| 6.2                                         | Problems in the Field of Elapsed Time .....           | 532        |
| 6.3                                         | Problems in the Field of Costs .....                  | 533        |
| 7.                                          | Final Remarks.....                                    | 534        |

## *PART IX: Medical Informatics as a Profession*

|                                                                                  |                                                                        |            |
|----------------------------------------------------------------------------------|------------------------------------------------------------------------|------------|
| <b>Chapter 36: Education and Training in Medical Informatics.....</b>            |                                                                        | <b>537</b> |
| 1.                                                                               | Introduction .....                                                     | 537        |
| 2.                                                                               | Medical Informatics Courses and Programs .....                         | 537        |
| 2.1                                                                              | Medical Informatics as Part of Educational Programs.....               | 538        |
| 2.1.1                                                                            | Medical Informatics in the Medical and Health Sciences Curricula ..... | 538        |
| 2.1.2                                                                            | Medical Informatics in Computer Science Educational Programs.....      | 538        |
| 2.1.3                                                                            | Medical Informatics in Other Educational Programs.....                 | 539        |
| 2.2                                                                              | Dedicated Programs in Medical Informatics.....                         | 539        |
| 2.3                                                                              | Continuing Education and Fellowship Training .....                     | 542        |
| 2.3.1                                                                            | Continuing Education .....                                             | 542        |
| 2.3.2                                                                            | Fellowship Training.....                                               | 542        |
| 3.                                                                               | Working Group on Health and Medical Informatics Education .....        | 542        |
| 4.                                                                               | The European Situation in Medical Informatics Education .....          | 543        |
| 4.1                                                                              | Europe .....                                                           | 543        |
| 4.2                                                                              | United States .....                                                    | 544        |
| 4.3                                                                              | General Observations .....                                             | 544        |
| 5.                                                                               | Recommendations for Medical Informatics Education .....                | 545        |
| 6.                                                                               | Conclusions .....                                                      | 547        |
| <i>Panel 1 Why Teaching Health and Medical Informatics? .....</i>                |                                                                        | <i>539</i> |
| <i>Panel 2 Recommendations on Health and Medical Informatics Education .....</i> |                                                                        | <i>546</i> |
| <b>Chapter 37: International Developments in Medical Informatics.....</b>        |                                                                        | <b>549</b> |
