Introduction	VII
Aspray, W. Mathematics, Computing, and Practical Engineering: Some Examples from Electric Power Engineering	1
Behr, H. Teaching Mathematics with Historical Components - some Experiences and Ideas.....	27
Bartolini Bussi, M. & Pergola, M. History in the Mathematics Classroom: Linkages and Kinematic Geometry.....	39
Chemla, K. Relations between Procedure and Demonstration. Measuring the Circle in the Nine Chapters on Mathematical Procedures and their Commentary by Liu Hui (3rd Century).....	69
Dauben, J. W. Arguments, Logic and Proof: Mathematics, Logic and the Infinite.....	113
Fraser, C. G. Jacobi's Theorem (1837) in the Calculus of Variations and its Formulations by Otto Hesse (1857). A Study in the Changing Interpretation of Mathematical Theorems.....	149
Jahnke, H. N. Set and Measure as an Example of Complementarity.....	173
Menghini, M. The Euclidean Method in Geometry Teaching.....	195

Otte, M.	
Kuhn Revisited.....	213
Panza, M.	
Concept of Function, between Quantity and Form, in the 18th Century.....	241
Scholz, E.	
The Doublesided Nature of Mathematics.....	275
Sierpiska, A.	
The Diachronic Dimension in Research on Understanding in Mathematics - Usefulness and Limitations of the Concept of Epistemological Obstacle.....	289
Struve, H.	
On the Epistemology of Mathematics in History and in School.....	319
Toepell, M.	
Aspects of History of Mathematics in the Junior High School - 5th to 7th Grade.....	335
