

CONTENTS

Introduction	1
Main Notation	5
CHAPTER I. Preliminary Facts.....	7
§1. Stable distributions. Convergence of distributions of sums of independent random variables to stable distributions	7
§2. Stable processes. Convergence to stable processes	10
§3. A characterization of a Brownian motion process with random time ...	14
§4. Local time of a stable process	18
CHAPTER II. Distributions of Functionals of Brownian Local Time.....	25
§1. Brownian local time.....	25
§2. Distributions of additive functionals of a Brownian motion process and of the maximum and minimum functionals.....	26
§3. The Markov property	37
§4. Distributions of integral functionals of Brownian local time and functionals of supremum type	44
§5. The exact modulus of continuity of Brownian local time $t(t, x)$ with respect to the variable t	54
§6. The law of the iterated logarithm for Brownian local time	56
§7. Distribution of functionals of sojourn time type	58
§8. Distribution of the supremum of the increments of Brownian local time	67
§9. The exact modulus of continuity of Brownian local time $t(t, x)$ with respect to the variable x	72
CHAPTER III. Limit Theorems for Functionals of Normalized Sums	79
§1. Introduction.....	79
§2. Limit theorems for η_n . Limit theorems of the first type	84
§3. Limit theorems of the first type. Continuation	95
§4. Convergence of distributions of random processes $\sum_{k \leq nt} f_n(S_{kn})$	103
§5. Limit theorems of the second type	112
§6. Supplements and generalizations	121
CHAPTER IV. Limit Theorems for Additive and Multiadditive Functionals of a Random Walk	131
§1. General limit theorems	131
§2. Limit theorems for integrable f	142

§3. Limit theorems of the second type 146

§4. Random walks in the domain of attraction of the Cauchy law 150

§5. Random walks in $\mathbb{R}^2$ 155

§6. Additive functionals $\sum_1^n f(S_k)$ determined by a periodic function f . 156

§7. The central limit theorem for Markov processes with normal transition operator 164

§8. Strong form of the central limit theorem 169

§9. Applications to random walks on compact Abelian groups 171

CHAPTER V. Invariance Principle for Local Times 177

§1. Formulation of the problems..... 177

§2. Auxiliary results 179

§3. Weak invariance principle (integer random walks) 190

§4. Weak invariance principle (continuous random walks) 203

§5. On the nature of convergence to Brownian local time 212

§6. Strong invariance principle 228

§7. Applications of the invariance principle 238
