

CONTENTS

1. INTRODUCTION	1
2. FINITE SETS	4
I. Set, element, equality of sets	4
II. Subset, complementary set, union, intersection.	7
III. Equivalent set, cardinal numbers	12
 3. INFINITE SETS	 17
IV. Equivalence and transfinite cardinal numbers .	17
V. Denumerable sets	20
VI. Non-denumerable sets	26
VII. Further non-denumerable sets	34
VIII. The equivalence theorem	39
IX. Sums and products of cardinal numbers . . .	44
X. Powers of cardinal numbers	49
 4. ORDERED SETS	 55
XI. Ordered sets and order-types	55
XII. Well-ordered sets and ordinal numbers . . .	63
 5. POINTS SETS	 69
XIII. Accumulation and condensation points	69
XIV. Closed, dense, and perfect sets	72

XV. Continuous sets	75
XVI. Range and continuity of functions	78

6. CONCLUSION	83
----------------------	-----------

XVII. The paradoxes of set theory	83
XVIII. Formalism and intuitionism	86

7. APPENDIX	93
--------------------	-----------

XIX. Glossary of definitions and theorems	93
XX. Brief historical outline	94
XXI. Bibliography	96
XXII. Glossary of symbols	97

Answers to exercises	99
-----------------------------	-----------

Index	105
--------------	------------
