# Contents

**Preface** ..... ix

---

## Part I Bilevel Programming

---

**Optimality conditions for bilevel programming problems**  
*Stephan Dempe, Vyatcheslav V. Kalashnikov and Nataliya Kalashnykova* 3

**Path-based formulations of a bilevel toll setting problem**  
*Mohamed Didi-Biha, Patrice Marcotte and Gilles Savard* ..... 29

**Bilevel programming with convex lower level problems**  
*Joydeep Dutta and Stephan Dempe* ..... 51

**Optimality criteria for bilevel programming problems using the radial subdifferential**  
*D. Fanghänel* ..... 73

**On approximate mixed Nash equilibria and average marginal functions for two-stage three-players games**  
*Lina Mallozzi and Jacqueline Morgan* ..... 97

---

## Part II Mathematical Programs with Equilibrium Constraints

---

**A direct proof for M-stationarity under MPEC-GCQ for mathematical programs with equilibrium constraints**  
*Michael L. Flegel and Christian Kanzow* ..... 111

**On the use of bilevel programming for solving a structural optimization problem with discrete variables**  
*Joaquim J. Júdice, Ana M. Faustino, Isabel M. Ribeiro and A. Serra Neves* ..... 123
