|------------------------------------------------------------------|----------|
| <b>Introduction</b>                                              | <b>1</b> |
| <br>                                                             |          |
| <b>Chapter 1    Circle planes</b>                                |          |
| Introduction                                                     | 7        |
| 1    Definitions and Notation                                    | 7        |
| 2    Models for classical circle planes                          | 10       |
| 3    Derived structures                                          | 13       |
| <br>                                                             |          |
| <b>Chapter 2    Antiregular quadrangles</b>                      |          |
| Introduction                                                     | 16       |
| 1    Generalised quadrangles                                     | 16       |
| 2    Square projections                                          | 19       |
| 3    The twisting number                                         | 22       |
| 4    Antiregular quadrangles                                     | 27       |
| 5    Characterisation of antiregular quadrangles                 | 29       |
| <br>                                                             |          |
| <b>Chapter 3    Laguerre planes and antiregular quadrangles</b>  |          |
| Introduction                                                     | 38       |
| 1    Laguerre planes constructed from antiregular quadrangles    | 38       |
| 2    Antiregular quadrangles constructed from Laguerre planes    | 40       |
| 3    Constructing topologies on the Lie geometry                 | 43       |
| <br>                                                             |          |
| <b>Chapter 4    Möbius planes and antiregular quadrangles</b>    |          |
| Introduction                                                     | 53       |
| 1    The Lie geometry of a Möbius plane                          | 54       |
| 2    The lifted Lie geometry of a flat Möbius plane              | 55       |
| 3    Constructing topologies on the lifted Lie geometry          | 58       |
| 4    Characterising quadrangles obtained from flat Möbius planes | 64       |

## **Chapter 5    Minkowski planes and antiregular quadrangles**

|                                                             |    |
|-------------------------------------------------------------|----|
| Introduction                                                | 73 |
| 1 The point space and parallel classes                      | 74 |
| 2 The circle space                                          | 74 |
| 3 The other spaces                                          | 78 |
| 4 The derivation of a Minkowski plane                       | 81 |
| 5 The Lie geometry of a Minkowski plane                     | 84 |
| 6 The lifted Lie geometry of a Minkowski plane              | 85 |
| 7 The topology on the lifted Lie geometry                   | 91 |
| 8 Characterising quadrangles obtained from Minkowski planes | 99 |

## **Chapter 6    Relationships of circle planes**

|                               |     |
|-------------------------------|-----|
| Introduction                  | 113 |
| 1 Sisters of Laguerre planes  | 116 |
| 2 Sisters of Möbius planes    | 117 |
| 3 Sisters of Minkowski planes | 120 |

## **Chapter 7    The problem of Apollonius**

|                                                 |     |
|-------------------------------------------------|-----|
| Introduction                                    | 123 |
| 1 The problem of Apollonius in Laguerre planes  | 129 |
| 2 The problem of Apollonius in Möbius planes    | 132 |
| One point and two circles                       | 134 |
| Three circles                                   | 136 |
| 3 The problem of Apollonius in Minkowski planes | 141 |
| Two points and one circle                       | 141 |
| One point and two circles                       | 141 |
| Three circles                                   | 143 |
