Preface	ix
Chapter 0. Introduction	1
Chapter 1. Symplectic Geometry	21
1.1. Symplectic Manifolds	21
1.2. Poisson Algebras	24
1.3. Poisson Structures arising from Noncommutative Algebras	26
1.4. The Moment Map	41
1.5. Coisotropic Subvarieties	49
1.6. Lagrangian Families	57
Chapter 2. Mosaic	61
2.1. Hilbert's Nullstellensatz	61
2.2. Affine Algebraic Varieties	63
2.3. The Deformation Construction	73
2.4. $\mathbb{C}^*$ -actions on a projective variety	81
2.5. Fixed Point Reduction	90
2.6. Borel-Moore Homology	93
2.7. Convolution in Borel-Moore Homology	110
Chapter 3. Complex Semisimple Groups	127
3.1. Semisimple Lie Algebras and Flag Varieties	127
3.2. Nilpotent Cone	144
3.3. The Steinberg Variety	154
3.4. Lagrangian Construction of the Weyl Group	161
3.5. Geometric Analysis of $\mathbf{H}(\mathbf{Z})$ -action	168
3.6. Irreducible Representations of Weyl Groups	175
3.7. Applications of the Jacobson-Morozov Theorem	183

Chapter 4. Springer Theory for $U(\mathfrak{sl}_n)$	193
4.1. Geometric Construction of the Enveloping Algebra $U(\mathfrak{sl}_n(\mathbb{C}))$	193
4.2. Finite-Dimensional Simple $\mathfrak{sl}_n(\mathbb{C})$ -Modules	199
4.3. Proof of the Main Theorem	206
4.4. Stabilization	214
Chapter 5. Equivariant K-Theory	231
5.1. Equivariant Resolutions	231
5.2. Basic K-Theoretic Constructions	243
5.3. Specialization in Equivariant K-Theory	254
5.4. The Koszul Complex and the Thom Isomorphism	260
5.5. Cellular Fibration Lemma	269
5.6. The Künneth Formula	273
5.7. Projective Bundle Theorem and Beilinson Resolution	276
5.8. The Chern Character	280
5.9. The Dimension Filtration and “Devissage”	286
5.10. The Localization Theorem	292
5.11. Functoriality	296
Chapter 6. Flag Varieties, K-Theory, and Harmonic Polynomials	303
6.1. Equivariant K-Theory of the Flag Variety	303
6.2. Equivariant K-Theory of the Steinberg Variety	311
6.3. Harmonic Polynomials	315
6.4. $\mathbf{W}$ -Harmonic Polynomials and Flag Varieties	321
6.5. Orbital Varieties	329
6.6. The Equivariant Hilbert Polynomial	335
6.7. Kostant’s Theorem on Polynomial Rings	346
Chapter 7. Hecke Algebras and K-Theory	361
7.1. Affine Weyl Groups and Hecke Algebras	361
7.2. Main Theorems	366
7.3. Case $\mathbf{q} = 1$: Deformation Argument	370
7.4. Hilbert Polynomials and Orbital Varieties	383
7.5. The Hecke Algebra for SL_2	389
7.6. Proof of the Main Theorem	395
Chapter 8. Representations of Convolution Algebras	411
8.1. Standard Modules	411
8.2. Character Formula for Standard modules	418
8.3. Constructible Complexes	421
8.4. Perverse Sheaves and the Classification Theorem	433
8.5. The Contravariant Form	438

8.6. Sheaf-Theoretic Analysis of the Convolution Algebra	445
8.7. Projective Modules over Convolution Algebra	460
8.8. A Non-Vanishing Result	468
8.9. Semi-Small Maps	479
Bibliography	487
