

Contents

Preface	vii
Principal Notation	ix
Chapter I. Linear Autonomous and Periodic Systems	1
§1. Adjoint systems	2
§2. The matriciant and its properties	3
§3. Linear systems with constant coefficients	8
§4. Homogeneous systems with periodic coefficients. The Floquet theorem	13
§5. Nonhomogeneous periodic systems	20
Chapter II. Lyapunov Characteristic Exponents in the Theory of Linear Systems	25
§1. Definition and main properties of characteristic exponents	25
§2. Characteristic exponents of matrices of functions	31
§3. The spectrum of a linear system	33
§4. Normal fundamental systems or normal bases	35
§5. The Lyapunov inequality for the sum of characteristic exponents of bases	40
Chapter III. Reducible, Almost Reducible, and Regular Systems	43
§1. Lyapunov transformations	43
§2. Reducible systems	45
§3. Reduction of a linear system to a triangular or a block-triangular form	48
§4. Almost reducible systems	57
§5. Regular systems	60
§6. Perron's regularity test. Coefficients of irregularity	63
§7. The structure of fundamental matrices of a regular system. Generalized reducibility	68
§8. Regularity of a triangular system	72
§9. Properties of solutions of regular systems	75
Chapter IV. Stability and Small Perturbations of the Coefficients of Linear Systems	79
§1. On stability of linear systems	79
§2. On stability of linear homogeneous systems whose coefficients are constant, periodic, or satisfy the Lappo-Danilevskii condition	84
§3. Almost constant systems	88
§4. Uniformly stable and uniformly asymptotically stable linear systems	95
§5. On perturbations preserving the spectrum of a system. The principle of linear inclusion	104

§6. Growth estimates of the solutions of linear systems in terms of the coefficients	108
Chapter V. On the Variation of Characteristic Exponents Under Small Perturbations of Coefficients	121
§1. Central exponents	122
§2. On the stability of characteristic exponents	136
§3. Integral separateness	146
§4. Necessary and sufficient conditions for stability of characteristic exponents	153
Chapter VI. A Linear Homogeneous Equation of the Second Order	175
§1. On the oscillation of solutions of a linear homogeneous equation of the second order	176
§2. On boundedness and stability of solutions of a linear equation of the second order	185
§3. Linear equations with periodic coefficients	190
Appendix	197
1. The Gronwall-Bellman lemma and its generalization	197
2. Regularity of a linear system almost reducible to an autonomous one	198
References	201
Index	203
