

TABLE OF CONTENTS

List of Figures	ix
List of Tables.....	xiii
Preface	xv

Mass Customization: State-of-the-art and Challenges 1

Thorsten Blecker and Nizar Abdelkafi

1. Introduction	2
2. Mass customization approaches	3
3. Selected critical factors to lead mass customization to success.....	4
4. The mass customization process.....	7
5. Mass customization challenges	14
6. Conclusions and contribution of the book.....	18

Personalized Needs Elicitation in Web-Based Configuration Systems..... 27

Gerold Kreutler and Dietmar Jannach

1. Introduction	28
2. Personalization and adaptation in the configuration process.....	29
3. Architectural requirements.....	36
4. Selected examples for successful personalization techniques.....	38
5. Conclusions	40

Model-Based Configuration Support for Software Product Families... 43

Katharina Wolter, Lothar Hotz and Thorsten Krebs

1. Introduction	43
2. Mass customization vs. configuration.....	44
3. Basic technologies	46
4. Application domain	48
5. The methodology	49
6. Experiments and experiences	57
7. Related work	58
8. Conclusion	59

Product Modeling on Multiple Abstraction Levels..... 63

Kaj A. Jørgensen

1. Introduction..... 64

2. The foundation for product configuration is product modeling 64

3. Models and modelling..... 66

4. Product family models 67

5. Fundamental issues of information modeling 70

6. A generic information model component..... 71

7. Formulation of product family models 74

8. Product family modeling on multiple abstraction levels..... 79

9. Conclusion 83

**Mass Customization: Balancing Customer Desires
with Operational Reality.....85**

Hossam Ismail, Iain Reid, Jenny Poolton and Ivan Arokiam

1. Background 86

2. The Voice of the Customer 89

3. A methodology to schieve mass customization..... 93

4. Feature similarity 94

5. Case study 101

6. Discussion and conclusions..... 106

Design for Changeover (DFC)..... 111

Michael P. Reik, Richard I. McIntosh, Geraint W. Owen, A.R. Mileham and
Steve J. Culley

1. Introduction..... 112

2. Manufacturing flexibility demanded by mass customization..... 113

3. DFC: a review of related research 117

4. Analysis of changeover capabilities 122

5. Evaluation of equipment design 130

6. The proposed design for changeover methodology 132

7. Conclusions 133

**Platform Products Development and Supply Chain Configuration:
an Integrated Perspective..... 137**

Xin Yan Zhang and George Q. Huang

1. Introduction 137
2. Integrated configuration of platform products and supply chain..... 141
3. Problem illustration 143
4. Notations and model formulation 145
5. Solution procedure..... 149
6. A numerical example 153
7. Conclusion and future work 156

**Modularity and Delayed Product Differentiation
in Assemble-to-order Systems 161**

Thorsten Blecker and Nizar Abdelkafi

1. Introduction 161
2. Literature review 162
3. Problem description 167
4. A necessary complement to the delayed product differentiation
principle in an assemble-to-order environment 170
5. Summary and conclusions..... 182

**A New Mixed-Model Assembly Line Planning Approach
for an Efficient Variety Steering Integration..... 187**

Stefan Bock

1. Introduction 188
2. Variety steering methods 189
3. Known balancing approaches in literature 192
4. The balancing model..... 194
5. The distributed tabu search algorithm..... 201
6. Computational results 204
7. Conclusions 208

**Order Fulfillment Models for the Catalog Mode
of Mass Customization – a Review 211**

Philip G Brabazon and Bart MacCarthy

1. Introduction 211
2. Delineating the order fulfillment processes..... 212
3. Order fulfillment structures..... 214
4. Influences on the choice of fulfillment mechanism..... 223
5. Conclusions 229

**Customer Service Level in a Lean Inventory
Under Mass Customization..... 233**

Wuyi Lu, Janet Efstathiou and Ernesto del Valle Lehne

1. Introduction and outline 234
2. Modeling lean and dynamic inventory..... 235
3. Mathematical model for customer service level with lean inventory 238
4. Relationship between customer service level, inventory capacity
and product variety 247
5. Summary and conclusion 249

HRM Policies for Mass Customization 251

Cipriano Forza, Fabrizio Salvador

1. Introduction 252
2. Research framework and questions 252
3. Method 254
4. Roles affected by mass customization 257
5. Mass customization competences..... 259
6. Training needs to build mass customization 262
7. The training needs for each role set 265
8. Conclusions, limitations and further research 267

Index 271

LIST OF FIGURES

<i>Figure 2-1.</i>	Personalized configuration page.....	31
<i>Figure 2-2.</i>	Possible architecture for a personalized configuration service.....	37
<i>Figure 3-1.</i>	Example for the definition of domain-specific knowledge based on the CAM. The CAM asset types (feature, hardware and software artifacts) are emphasized in dark boxes while the domain-specific entities are distinguished by light-colored boxes	50
<i>Figure 3-2.</i>	Part of a configuration model for the CPS domain.....	51
<i>Figure 3-3.</i>	Selection of Features (Parking Assistance and PreFire) for a CPS System.....	53
<i>Figure 3-4.</i>	Software Artifacts (Parking Module and Pre-Fire Module) inferred by the Configuration Tool.....	54
<i>Figure 3-5.</i>	(Part of a) XML configuration output.....	55
<i>Figure 4-1.</i>	The product family model as the foundation for product configuration.	68
<i>Figure 4-2.</i>	Model of the structure with the three levels.	69
<i>Figure 4-3.</i>	Classification and composition hierarchies.....	71
<i>Figure 4-4.</i>	Generic model component.	72
<i>Figure 4-5.</i>	Generic component type.	73
<i>Figure 4-6.</i>	Component type is the basis for generating components (instances).	74
<i>Figure 4-7.</i>	Four kinds of relations.	77
<i>Figure 4-8.</i>	Domain constraints for attributes that describe if and how the values in the domain shall be chosen.....	77
<i>Figure 4-9.</i>	Analytic description on top level of abstraction – behavioral attributes	79
<i>Figure 4-10.</i>	Synthetic description on top level of abstraction – behavioral attributes.....	80
<i>Figure 4-11.</i>	Synthetic model on top level of abstraction – behavioral attributes transformed to factual attributes.....	80
<i>Figure 4-12.</i>	Synthetic description of product family model including attributes and relations.	81
<i>Figure 4-13.</i>	Specification of modules directly or indirectly through functionalities.	82
<i>Figure 5-1.</i>	Agility Strategic Framework.....	87
<i>Figure 5-2.</i>	Agility Capability Indicators and Product Flexibility.....	89

Figure 5-3.	The QFD House of Quality	90
Figure 5-4.	Extended Ansoff Matrix	92
Figure 5-5.	Example Product Feature Structures	96
Figure 5-6.	Company X's Distribution Channel	101
Figure 5-7.	Voice of the Retailer's impact on the Product Portfolio	102
Figure 6-1.	The attributes which influence changeover performance ...	117
Figure 6-2.	Distinguishing phases of a changeover	122
Figure 6-3.	Enhanced 4P diagram: Elements of a changeover.....	123
Figure 6-4.	Change Drivers: Drivers for changeover activity.....	124
Figure 6-5.	Change elements involved in changeover processes	125
Figure 6-6.	Changeover activities for physical parts and subassemblies.....	126
Figure 6-7.	Case study of relations between change drivers and Change Elements....	129
Figure 6-8.	Sample illustration of a change driver flow-down tree structure.....	129
Figure 6-9.	Flowchart of the Design for Changeover Process	132
Figure 7-1.	Typical scenarios of Integrated Configuration of Platform Products and Supply Chain (ICPPSC)	142
Figure 7-2.	Integrated configuration of platform products and supply chain (ICPPSC).....	145
Figure 7-3.	Solution procedure.....	152
Figure 8-1.	Optimal variety proliferation of a PC assembly process according to the delayed product differentiation principle	168
Figure 8-2.	Variety proliferation according to two different PC assembly sequences....	169
Figure 8-3.	Two-stage assembly process.....	175
Figure 8-4.	Weighted Shannon entropies for different values of (v/t)	179
Figure 10-1.	Speculation and Postponement structures (adapted from Bucklin, 1965)	214
Figure 10-2.	Structures for fulfillment from stock	217
Figure 10-3.	Structure studied by Graman & Magazine (2002).....	219
Figure 10-4.	Structure studied by Denton <i>et al</i> (2003).....	220
Figure 10-5.	Structure studied by Swaminathan & Tayur (1998, 1999).....	220
Figure 10-6.	Structure studied by Raturi <i>et al.</i> (1990).....	221
Figure 10-7.	Structure studied by Holweg (2000).....	222
Figure 10-8.	Importance of wait in the decision to buy, Elias (2002)	228
Figure 10-9.	Ideal wait from placing the order to delivery, Elias (2002).....	228

<i>Figure 11-1.</i> A Lean and Dynamic Inventory	236
<i>Figure 11-2.</i> Summary of Procedure to Calculate T_{total} and T_i	243
<i>Figure 11-3.</i> Probability and Inventory Units in Fixed Number of Variants.....	248
<i>Figure 11-4.</i> Probability and Number of Variants in Fixed Inventory Units.....	248
<i>Figure 12-1.</i> Research framework	254
<i>Figure 12-2.</i> Attitude categories affected by mass customization.....	260
<i>Figure 12-3.</i> Knowledge categories affected by mass customization.....	261
<i>Figure 12-4.</i> Ability categories affected by mass customization	262
<i>Figure 12-5.</i> Attitudes that have to be developed.....	263
<i>Figure 12-6.</i> Knowledge categories that have to be developed.....	264
<i>Figure 12-7.</i> Abilities that have to be developed.....	265

LIST OF TABLES

<i>Table 5-1.</i>	Feature Contribution of the "Compact" Family product range.	103
<i>Table 5-2.</i>	Feature similarity ratings for existing product range.....	104
<i>Table 5-3.</i>	Feature similarity ratings for existing product range.....	104
<i>Table 5-4.</i>	Steel Variations	104
<i>Table 5-5.</i>	Feature similarity ratings by eliminating pre-cut lengths in both galvanized and non-galvanized tubing	105
<i>Table 5-6.</i>	Feature similarity ratings by standardizing tube wall thicknesses.	105
<i>Table 7-1.</i>	Parameters and variables of the Manufacturer	146
<i>Table 7-2.</i>	Platform products configuration results.....	154
<i>Table 7-3.</i>	Supply chain configuration results	155
<i>Table 7-4.</i>	Various costs results	155
<i>Table 9-1.</i>	Variant structure of a German automotive manufacturer for a middle-class car.....	191
<i>Table 9-2.</i>	Measured average results for the executed experiments of scenario 1 in the Workstation Cluster.....	205
<i>Table 9-3.</i>	Results of a single searching path without artificial background load in scenario 2.....	206
<i>Table 9-4.</i>	The effect of the additional background load in the ETHERNET Cluster for a single searching path with 8 processors in scenario 2	207
<i>Table 11-1.</i>	Number of ways of distributing 10 inventory items over 3 variants.....	241
<i>Table 12-1.</i>	Company sample - part A	256
<i>Table 12-2.</i>	Company sample - part B	256
<i>Table 12-3.</i>	Respondents sample	256
<i>Table 12-4.</i>	Professional figures and role sets affected by product customization	259
<i>Table 12-5.</i>	The role set citation in terms of competence training needs.....	266
<i>Table 12-6.</i>	The role set citation in terms of participation of training processes... ..	267
