Contents

Preface vii

Chapter 1. Introduction 1
1.1. Introductory Remarks on Supersymmetry 1
1.2. Classical Mechanics and the Electromagnetic and Gravitational Fields 2
1.3. Principles of Quantum Mechanics 9
1.4. Symmetries and Projective Unitary Representations 17
1.5. Poincaré Symmetry and Particle Classification 23
1.6. Vector Bundles and Wave Equations: The Maxwell, Dirac, and Weyl Equations 37
1.7. Bosons and Fermions 48
1.8. Supersymmetry as the Symmetry of a $\mathbf{Z}_2$-Graded Geometry 51
1.9. References 52

Chapter 2. The Concept of a Supermanifold 59
2.1. Geometry of Physical Space 59
2.2. Riemann's Inaugural Talk 63
2.3. Einstein and the Geometry of Spacetime 66
2.4. Mathematical Evolution of the Concept of Space and Its Symmetries 67
2.5. Geometry and Algebra 72
2.6. A Brief Look Ahead 76
2.7. References 79

Chapter 3. Super Linear Algebra 83
3.1. The Category of Super Vector Spaces 83
3.2. The Super Poincaré Algebra of Gol'fand-Likhtman and Volkov-Akulov 90
3.3. Conformal Spacetime 95
3.4. The Superconformal Algebra of Wess and Zumino 108
3.5. Modules over a Supercommutative Superalgebra 113
3.6. The Berezinian (Superdeterminant) 116
3.7. The Categorical Point of View 119
3.8. References 124

Chapter 4. Elementary Theory of Supermanifolds 127
4.1. The Category of Ringed Spaces 127

4.2. Supermanifolds 130
4.3. Morphisms 138
4.4. Differential Calculus 143
4.5. Functor of Points 150
4.6. Integration on Supermanifolds 152
4.7. Submanifolds: Theorem of Frobenius 157
4.8. References 167

Chapter 5. Clifford Algebras, Spin Groups, and Spin Representations 169
5.1. Prologue 169
5.2. Cartan's Theorem on Reflections in Orthogonal Groups 174
5.3. Clifford Algebras and Their Representations 178
5.4. Spin Groups and Spin Representations 192
5.5. Spin Representations as Clifford Modules 203
5.6. References 208

Chapter 6. Fine Structure of Spin Modules 211
6.1. Introduction 211
6.2. The Central Simple Superalgebras 212
6.3. The Super Brauer Group of a Field 222
6.4. Real Clifford Modules 227
6.5. Invariant Forms 236
6.6. Morphisms from Spin Modules to Vectors and Exterior Tensors 250
6.7. The Minkowski Signature and Extended Supersymmetry 256
6.8. Image of the Real Spin Group in the Complex Spin Module 262
6.9. References 272

Chapter 7. Superspacetimes and Super Poincaré Groups 273
7.1. Super Lie Groups and Their Super Lie Algebras 273
7.2. The Poincaré-Birkhoff-Witt Theorem 279
7.3. The Classical Series of Super Lie Algebras and Groups 289
7.4. Superspacetimes 294
7.5. Super Poincaré Groups 299
7.6. References 299
