

Table of Contents

Abstract	1
1 Introduction	3
1.1 The Situation	3
1.2 The Problem	7
1.3 The Approach	9
1.4 State of the Art	12
1.5 Overview	15
Part One: Domain Analysis and Specification	17
2 The Analysis of Morphology	19
2.1 The Result	19
2.1.1 Uses	19
2.1.2 The Morphology-Trees	20
2.2 The Method	22
2.2.1 Segmentation and Parsing	22
2.2.2 Requirements on the Grammar Type	24
3 Context-Free Feature Grammar	29
3.1 Definition	29
3.1.1 General Considerations	29
3.1.2 The PATR-II Grammar	31
3.1.3 The CFF Grammar	34

3.2	CFFG Generation	37
3.2.1	The Generation Variants	38
3.2.2	The Combine-and-Agree Algorithm	43
3.2.3	The Take-and-Restrict Algorithm	48
3.2.4	The Cycle-protect Algorithm	52
4	Morphology Description Grammar	57
4.1	The CMKS Language	57
4.1.1	The Feature-set	59
4.1.2	The Formatives	60
4.1.3	The Rules	61
4.2	The MDG	76
4.2.1	Uses	76
4.2.2	Definition	79
4.3	MDG Generation	81
4.3.1	Overview of the Generation	81
4.3.2	Inflection in MDG Rules	83
4.3.3	Wordformation in MDG Rules	89
4.3.4	Cycles and Conversion Rules	95
4.3.5	Epsilon-Rules	98
	Part Two: Design and Implementation	101
5	The Distributed Application Foundation	103
5.1	Remote Program Execution	104
5.1.1	Definition	104
5.1.2	Advantages	105
5.2	The RPE Model	106
5.2.1	Use	106
5.2.2	Inside RPE	108
5.2.3	Implementation	109

6	The Modal System	115
6.1	Overall Structure	115
6.2	The Grammar Generator	119
6.2.1	Objectivation	121
6.2.2	Abstraction	123
6.2.3	Decomposition	125
6.2.4	Performance Measurements	127
6.3	The Analyser	128
6.3.1	Segmentation	129
6.3.2	Conversion Analysis	132
6.3.3	Parsing	132
6.3.4	The User Interface	133
6.3.5	Performance Measurements	135
6.4	Evaluation and Extensions	137
6.4.1	Evaluation	137
6.4.2	Extensions	138
7	Conclusion	139
	Appendix	143
	References	149
	List of Abbreviations	155
	Index	157
