

Contents

Preface	vii
1 Schrödinger's View of Natural Laws	
1.1 Most probable realizations	2
1.2 A large deviation approach	6
1.3 Prediction from past and future	8
1.4 An analogy to wave functions	12
1.5 Two representations of diffusions	15
1.6 Identification of drift	18
2 Diffusions with Singular Drift	
2.1 Schrödinger equations	24
2.2 Non-smooth Schrödinger multipliers	29
2.3 Singular transformation of diffusions	33
2.4 Schrödinger processes	46
3 Integral and Diffusion Equations	
3.1 Generators and transition densities	55
3.2 Feynman-Kac integral equations	57
3.3 'Killed' integral equations	65
3.4 Equivalence of solutions	70
4 Itô's Formula for Non-Smooth Functions	
4.1 Meaning and generalization	77
4.2 Driving Brownian motion	79
4.3 Driving flows of diffeomorphisms	82

5 Large Deviations

5.1	Approximate Sanov property	92
5.2	Csiszar's projection and τ_0 -topology	96

6 Interacting Diffusion Processes

6.1	Eddington-Schrödinger prediction	116
6.2	Limiting distributions	117
6.3	Propagation of chaos in entropy	123
6.4	Renormalization procedures	142
6.5	Conditions on creation and killing	146

7 Schrödinger Systems

7.1	Non-linear integral equations	152
7.2	Product measure endomorphisms	155
7.3	A variational principle for local adjoints	161
7.4	Construction of solutions	171
