

Contents

Preface	vii
1. Introduction	1
1.1 Linear Equations: An Introduction	1
1.2 Iterative Methods: An Introduction	2
1.3 Algebraic Problems: An Introduction	4
(a) Chemical equilibrium problems	5
(b) Leontieff input–output analysis	6
(c) General market equilibrium	6
(d) Electric power networks	7
(e) Differential equations	8
(f) Partial differential equations	9
 PART I LINEAR ALGEBRA	
2. Direct Methods for Linear Equations	13
2.1 Introduction	13
2.2 Gauss Elimination	14
2.3 Pivoting Strategy	17
2.4 Triangular Factorization	21
3. Orthogonal Factorization	28
3.1 Existence and Uniqueness	28
3.2 Givens Transformations	31
3.3 Overdetermined Systems: An Introduction	35
3.4 Overdetermined Systems: A Numerical Implementation	37
4. Sparse-matrix Techniques	41
4.1 Introduction	41
4.2 Reduction of Fill-in	44
(a) Minimizing the local fill-in	45
(b) Markowitz criterion	47
(c) Other methods	48
4.3 Methods for Structured Matrices	49
(a) Reverse Cuthill–McKee	50
(b) Nested dissection	54

PART II NON-LINEAR EQUATIONS

5. One-point Iteration Formulae	61
5.1 Introduction	61
5.2 Contraction Mapping Theorem	63
5.3 Proof of the Contraction Mapping Theorem	67
5.4 Systems of Non-linear Equations	70
5.5 Iterative Methods for Systems of Linear Equations	75
5.6 Order of Convergence	80
5.7 Interpolatory Iteration Formulae	83
(a) Direct interpolation	84
(b) Inverse interpolation	86
5.8 Newton's Method for Systems of Equations	90
5.9 Brown's Method	94
5.10 Global Convergence of Newton's Method	97
6. Multi-step Iteration Formulae	102
6.1 Introduction	102
6.2 Interpolatory Iteration Formulae	104
(a) Direct interpolation	104
(b) Inverse interpolation	106
6.3 Order of Convergence	107
6.4 Bracketing Methods	111
7. Systems of Equations	118
7.1 The Secant Method	118
7.2 Quasi-Newton Methods	121
7.3 Efficient Implementation of quasi-Newton Methods	124
(a) Updating the orthogonal factors	124
(b) Using the structure of the Jacobian	128
7.4 Gradient Methods	131
8. Other Methods	134
8.1 Multiple Roots	134
8.2 Aitken's Δ^2 -acceleration	137
*8.3 Multi-stage Methods	140
*8.4 A Continuation Method	143
9. Comparison of Methods	145
9.1 Comparison of Newton and Secant Iterations	146
*9.2 More General Comparisons	148
Historical Appendix	150
Bibliography	153
Index	157
