

Table of Contents

Simulation

The Approximation and the Generation of Stationary Vector Processes <i>D. Ammon and W. Wedig</i>	1
Numerical Methods and Mathematical Aspects for Simulation of Homogeneous and Non-Homogeneous Gaussian Vector Fields <i>F. Poirion and C. Soize</i>	17
Simulation of Stochastic Differential Systems <i>D. Talay</i>	54

Stability. Lyapunov Exponents and Stochastic Bifurcation

Lyapunov Exponents Indicate Stability and Detect Stochastic Bifurcations <i>P. Bozler</i>	97
Pitchfork and Hopf Bifurcations in Stochastic Systems - Effective Methods to Calculate Lyapunov Exponents <i>W. Wedig</i>	120
Stochastic Center as a Tool in a Stochastic Bifurcation Theory <i>P. Bozler</i>	149
Lyapunov Exponents for a Class of Hyperbolic Random Equations <i>I. Lindemann</i>	167

Probability Vector Spaces and Statistics on Trajectories

Functional Analysis in Stochastic Modelling <i>P. Krée</i>	182
Pullback of Measures and Singular Conditioning <i>P. Bernard and P. Krée</i>	199

Parametric Stochastic Control of Non-Linear Systems and Stochastic Equivalent Linearization

Adaptive Sub-Optimal Parametric Control for Non-Linear Stochastic Systems. Application to Semi-Active Isolators <i>S. Bellizzi and R. Bouc</i>	223
--	-----

Optimal Ergodic Control of Nonlinear Stochastic Systems <i>F. Campillo</i>	239
---	-----

Stochastic Dynamics of Hysteretic Media <i>F. Casciati</i>	270
---	-----

Resolution of Fokker–Planck Equation (FPE)

Exact Steady-State Solution of FKP Equation in Higher Dimension for a Class of Non-Linear Hamiltonian Dissipative Dynamical Systems Excited by Gaussian White Noise <i>C. Soize</i>	284
--	-----

Power Spectra of Nonlinear Dynamic Systems - Analysis via Generalized Hermite Polynomials <i>W. Wedig</i>	310
---	-----

Some Remarks Concerning Convergence of Orthogonal Polynomial Expansions <i>P. Bernard</i>	327
---	-----

Wiener Filtering

Un Solveur de Wiener Rapide: Résolution des Systèmes de Toeplitz par une Méthode de Gradient Conjugué Préconditionné <i>P. Fayol</i>	335
--	-----
