|------------------|---------------------------------------------------|------|
|                  | <b>List of Figures</b>                            | ix   |
|                  | <b>List of Tables</b>                             | xi   |
|                  | <b>Preface</b>                                    | xiii |
| <b>Chapter 1</b> | <b>Introduction</b>                               | 1    |
|                  | Systems Analysis Approach                         | 1    |
| <b>Chapter 2</b> | <b>Elements of Calculus</b>                       | 5    |
|                  | Basic Concepts                                    | 5    |
|                  | Functions                                         | 6    |
|                  | The Exponential Function                          | 14   |
|                  | Inverse Function, Logarithmic Function            | 21   |
| <b>Chapter 3</b> | <b>Mathematics of Material Transport</b>          | 25   |
|                  | Mass Transport Rates—The Partial Derivative       | 25   |
|                  | Taylor Series Expansion—The Total Time Derivative | 27   |
|                  | Equation of Continuity                            | 31   |
| <b>Chapter 4</b> | <b>Models of Environmental Processes</b>          | 39   |
|                  | The Modeling Process                              | 39   |
|                  | Common Environmental Models                       | 39   |
|                  | Biological Processes in Reactors                  | 46   |
|                  | Other Models                                      | 48   |
| <b>Chapter 5</b> | <b>Differential Equations</b>                     | 51   |
|                  | Introduction                                      | 51   |
|                  | Indefinite Integrals                              | 52   |
|                  | Identification and Classification of Equations    | 53   |
|                  | Solution Techniques                               | 58   |
| <b>Chapter 6</b> | <b>Elements of Statistics</b> <i>Earl Rich</i>    | 117  |
|                  | Introduction                                      | 117  |
|                  | Basic Concepts                                    | 117  |

|                                |     |
|--------------------------------|-----|
| Hypothesis Testing             | 126 |
| The Normal Distribution        | 133 |
| The Binomial Distribution      | 136 |
| The Student's $t$ Distribution | 140 |
| $\chi^2$ Distribution          | 142 |
| Confidence Interval Estimation | 147 |

|                  |                           |     |
