

Contents

1. Unconstrained Optimization	p. 1
1.1. Optimality Conditions	p. 2
1.1.1. Variational Ideas	p. 2
1.1.2. Main Optimality Conditions	p. 10
1.2. Gradient Methods – Convergence	p. 18
1.2.1. Descent Directions and Stepsize Rules	p. 18
1.2.2. Convergence Results	p. 38
1.3. Gradient Methods – Rate of Convergence	p. 54
1.3.1. The Local Analysis Approach	p. 56
1.3.2. The Role of the Condition Number	p. 58
1.3.3. Convergence Rate Results	p. 68
1.4. Newton’s Method and Variations	p. 79
1.5. Least Squares Problems	p. 92
1.5.1. The Gauss-Newton Method	p. 97
1.5.2. Incremental Gradient Methods*	p. 99
1.5.3. Incremental Forms of the Gauss-Newton Method*	p. 107
1.6. Conjugate Direction Methods	p. 118
1.7. Quasi-Newton Methods	p. 134
1.8. Nonderivative Methods	p. 142
1.8.1. Coordinate Descent	p. 143
1.8.2. Direct Search Methods	p. 144
1.9. Discrete-Time Optimal Control*	p. 149
1.10. Some Practical Guidelines	p. 165
1.11. Notes and Sources	p. 170
2. Optimization Over a Convex Set	p. 173
2.1. Optimality Conditions	p. 174
2.2. Feasible Directions and the Conditional Gradient Method	p. 191
2.2.1. Descent Directions and Stepsize Rules	p. 191
2.2.2. The Conditional Gradient Method	p. 195
2.3. Gradient Projection Methods	p. 203
2.3.1. Feasible Directions and Stepsize Rules Based on Projection	p. 203

2.3.2. Convergence Analysis*	p. 214
2.4. Two-Metric Projection Methods	p. 224
2.5. Manifold Suboptimization – Quadratic Programming	p. 230
2.6. Affine Scaling for Linear Programming	p. 238
2.7. Block Coordinate Descent Methods*	p. 246
2.8. Notes and Sources	p. 250
3. Lagrange Multiplier Theory	p. 253
3.1. Necessary Conditions for Equality Constraints	p. 254
3.1.1. The Elimination Approach	p. 257
3.1.2. The Penalty Approach	p. 261
3.1.3. The Lagrangian Function	p. 265
3.2. Sufficient Conditions and Sensitivity Analysis	p. 271
3.2.1. Proofs Using the Augmented Lagrangian	p. 274
3.2.2. Sensitivity*	p. 277
3.3. Inequality Constraints	p. 282
3.3.1. Necessary Conditions	p. 284
3.3.2. Proofs Based on Conversion to the Equality Case*	p. 286
3.3.3. Second Order Sufficiency Conditions and Sensitivity*	p. 287
3.4. Linear Constraints*	p. 292
3.4.1. Convex Cost Functions and Linear Constraints	p. 295
3.4.2. Duality Theory: A Simple Form	p. 298
3.4.3. Relation of Primal and Dual Functions – Sensitivity	p. 303
3.5. Notes and Sources	p. 310
4. Lagrange Multiplier Algorithms	p. 311
4.1. Barrier and Interior Point Methods	p. 312
4.1.1. Linear Programming and the Logarithmic Barrier*	p. 315
4.2. Penalty and Augmented Lagrangian Methods	p. 330
4.2.1. The Quadratic Penalty Function Method	p. 332
4.2.2. Multiplier Methods – Main Ideas	p. 340
4.2.3. Convergence Analysis of Multiplier Methods*	p. 349
4.2.4. Duality and Second Order Multiplier Methods*	p. 352
4.2.5. The Exponential Method of Multipliers*	p. 354
4.3. Exact Penalties – Sequential Quadratic Programming*	p. 361
4.3.1. Nondifferentiable Exact Penalty Functions	p. 362
4.3.2. Differentiable Exact Penalty Functions	p. 379
4.4. Lagrangian and Primal-Dual Interior Point Methods*	p. 385
4.4.1. First-Order Methods	p. 386
4.4.2. Newton-Like Methods for Equality Constraints	p. 389
4.4.3. Global Convergence	p. 399
4.4.4. Primal-Dual Interior Point Methods	p. 402
4.4.5. Comparison of Various Methods	p. 410
4.5. Notes and Sources	p. 412

5. Duality and Convex Programming	p. 415
5.1. The Dual Problem	p. 416
5.1.1. Lagrange Multipliers	p. 418
5.1.2. The Weak Duality Theorem	p. 422
5.1.3. Characterization of Primal and Dual Optimal Solutions	p. 427
5.1.4. The Case of an Infeasible or Unbounded Primal Problem	p. 428
5.1.5. Treatment of Equality Constraints	p. 428
5.1.6. Separable Problems and Their Geometry	p. 430
5.2. Convex Cost – Linear Constraints*	p. 437
5.2.1. Proofs of Duality Theorems	p. 439
5.3. Convex Cost – Nonlinear Constraints	p. 445
5.3.1. Convex Inequality and Linear Equality Constraints*	p. 448
5.4. Conjugate Functions and Fenchel Duality*	p. 454
5.4.1. Monotropic Programming Duality	p. 458
5.4.2. Network Optimization	p. 460
5.4.3. Games and the Minimax Theorem	p. 463
5.4.4. The Primal Function	p. 466
5.4.5. A Dual View of Penalty Methods	p. 467
5.4.6. The Proximal and Entropy Minimization Algorithms	p. 473
5.5. Notes and Sources	p. 486
6. Dual Methods	p. 487
6.1. Dual Derivatives and Subgradients*	p. 490
6.2. Dual Ascent Methods for Differentiable Dual Problems*	p. 496
6.2.1. Coordinate Ascent for Quadratic Programming	p. 496
6.2.2. Dualization and Primal Strict Convexity	p. 498
6.2.3. Partitioning and Dual Strict Concavity	p. 499
6.3. Nondifferentiable Optimization Methods*	p. 504
6.3.1. Subgradient Methods	p. 505
6.3.2. Cutting Plane Methods	p. 509
6.3.3. Ascent and Approximate Ascent Methods	p. 515
6.4. Decomposition Methods*	p. 524
6.4.1. Lagrangian Relaxation of the Coupling Constraints	p. 525
6.4.2. Decomposition by Right-Hand Side Allocation	p. 529
6.5. Notes and Sources	p. 531
Appendix A: Mathematical Background	p. 533
Appendix B: Convex Analysis	p. 557
Appendix C: Line Search Methods	p. 602
Appendix D: Implementation of Newton's Method	p. 607
References	p. 613
Index	p. 643
