

CONTENTS

5	Compactness results for compressible isentropic Navier-Stokes equations	1
5.1	Preliminaries	1
5.2	Compactness results and propagation of oscillations	7
5.3	Proofs of compactness results in the whole space case	15
5.4	Proofs of compactness results in the other cases	30
5.5	General pressure laws	36
5.6	Other boundary value problems	39
6	Stationary problems	49
6.1	Preliminaries	49
6.2	Existence and regularity results for time-discretized problems	51
6.3	A priori estimates	57
6.4	Compactness	80
6.5	Existence proofs	84
6.6	The isothermal case in two dimensions	97
6.7	Stationary problems	112
6.8	Exterior problems and related questions	128
6.9	Regularity of solutions	144
6.10	Related problems	158
6.11	General compressible models	162
7	Existence results for Cauchy problems	172
7.1	A priori bounds	172
7.2	Existence results	180
7.3	Existence proofs via regularization	182
7.4	Existence proofs via time discretization	197
7.5	General pressure laws	205
7.6	Other boundary-value problems	209
8	Related problems	213
8.1	Pure transport of entropy	213
8.2	A semi-stationary model	224
8.3	A Stokes-like model	236
8.4	On some shallow water models	251
8.5	Compactness properties for compressible models with temperature	254

8.6	Global existence results for some compressible models with temperature	262
8.7	On compressible Euler equations	271
8.8	On a low Mach number model	281
Appendix A: A few facts about some function spaces		288
Appendix B: On a weakly continuous product		290
Appendix C: A remark on the limiting case of Sobolev inequalities		292
Appendix D: Continua and limits		295
Appendix E: On sums of L^P spaces		297
Appendix F: A remark on parabolic equations		300
Bibliography		307
Errata (Volume 1)		337
Index		341
