

Contents

Preface	vii
---------	-----

Chapter 1	Mathematical Processes	1
-----------	------------------------	---

1.1	Induction and Deduction	1
1.2	Exploring Number Sequences	2
1.3	Confirming Take-a-Number Puzzles	3
1.4	Problem Solving	8
1.5	Problems	10
1.6	Flowcharting	13
	Summary	18

Chapter 2	Structure in Number Systems	19
-----------	-----------------------------	----

2.1	Introductory Calendar Problems	19
2.2	Operation Tables for Z_7	20
2.3	Statements about $(Z_7, +)$	23
2.4	More on the Multiplication Table for Z_7	26
2.5	Statements about $(Z_7, \cdot)$	27
2.6	Statements about $(Z_7, +, \cdot)$	29
2.7	Fundamental Properties of $(Z_7, +, \cdot)$	31
2.8	The Field Properties	31
2.9	Properties of Whole Numbers, Integers, and Rationals	34
2.10	Solution of Equations in Various Systems	38
2.11	Flowcharts for Solutions of Equations	42
2.12	Programming in the BASIC Language	43
2.13	Refining Programs	50

2.14	Subtraction in Various Systems	57
2.15	Division in Various Systems	60
2.16	Properties of $(\mathbb{Z}_n, +, \cdot)$	64
	Summary	69

Chapter 3 **Binary Operations and Groups** 71

3.1	Nonstandard Operations and Their Properties	71
3.2	Operations on Points of a Plane	78
3.3	Introduction to Sets and Set Notation	81
★3.4	Binary Operations on $P(U)$	84
3.5	Motions of an Equilateral Triangle	87
3.6	A Basic Definition and Some Notations	92
3.7	A Brief Look at Isomorphism	96
★3.8	More Examples of Finite Groups	101
3.9	Exploring Other Properties of Groups	104
3.10	Some Theorems about Groups	105
3.11	A Few Infinite Groups and a Summary	107
★3.12	More on Isomorphism	109
★3.13	Subgroups	113
	Summary	116

Chapter 4 **Sets Structured by Relations** 117

4.1	Relations and Their Graphs	117
4.2	Properties of Relations	124
4.3	Relations and Operations	126
4.4	Equivalence Relations and Equivalence Classes	129
4.5	Finite Affine Geometry	132
4.6	Parallel Lines	138
4.7	Geometric Relations	140
4.8	A Special Relation	144
4.9	A Little Bit of Logic	148
4.10	Proving Some Relations	151
4.11	Factorization	152
4.12	Have the Computer Do It	159
★4.13	A Little Bit More Logic	167
4.14	Divisibility Tests	171

4.15	The Division and Euclidean Algorithms	175
	Summary	178

Chapter 5 Sets Structured by Mappings 180

5.1	Symmetry and Motion	180
5.2	Mapping	186
5.3	Mapping Graphs and Applications	195
5.4	Inverses for Mappings	200
5.5	Composition of Mappings	205
	Summary	209

Chapter 6 Congruence of Shapes 210

6.1	Same Size and Shape	210
6.2	Definitions and Undefinables in Mathematics	212
6.3	A Glossary of Mathematical Terms	214
6.4	A Dictionary of Rigid Motions	215
6.5	Defining Characteristics and Notation for Rigid Motions	221
6.6	Defining the Image Point	223
6.7	Special Points and Lines	224
6.8	A System of Rigid Motions	227
★6.9	Another Look at Line Reflections	229
6.10	Reflecting, Rotating, and Sliding to Congruence	231
6.11	Small Scale Axiomatics—Half-Turns	235
	Summary	241

Chapter 7 Measurement 242

7.1	An Overview	242
7.2	Properties of Measurement	243
7.3	Measurement Activities	250
7.4	The International System of Units (SI)	251
7.5	Perimeter and Area of Polygons	256
7.6	A Special Property of a Right Triangle	260

7.7	Real Numbers	265
7.8	Circles and Circular Regions	272
7.9	Volume	277
	Summary	282

Chapter 8 Similarity 283

8.1	Another Mapping	283
8.2	System of Dilations	288
8.3	Deductions Based on Dilations	288
8.4	Similar Figures	289
8.5	Area and Volume of Similar Figures	292
8.6	Using What You Know about Similarity in Problem Solving	294
	Summary	295

Chapter 9 Probability and Statistics 297

9.1	Introduction	297
9.2	Statistics	298
9.3	Frequency Distributions	302
9.4	Probability	307
9.5	Prediction	312
★9.6	The Central Limit Theorem	318
	Summary	320

<i>Index</i>	321
