Overview	1
What can agriculture do for development?	2
What are effective instruments in using agriculture for development?	8
How can agriculture-for-development agendas best be implemented?	18

Part I What can agriculture do for development? 26

1	Growth and poverty reduction in agriculture's three worlds	26
	The structural transformation	27
	The three worlds of agriculture for development	29
	Agriculture's development potential shortchanged	38
	The political economy of agricultural policy	42
	A new role for agriculture in development	44
	<i>focus A: Declining rural poverty has been a key factor in aggregate poverty reduction</i>	45
2	Agriculture's performance, diversity, and uncertainties	50
	Productivity growth in developing countries drove agriculture's global success	50
	Growth across regions and countries has been uneven	53
	Differences in performance reflect different underlying conditions	54
	Opportunities for a new agriculture through diversification	58
	Future perspectives: confronting challenges and rising uncertainties	61
	Conclusion—a continuing production challenge	68

<i>focus B: Biofuels: the promise and the risks</i>	70
---	----

3 Rural households and their pathways out of poverty

Three complementary pathways out of rural poverty: farming, labor, and migration 73

The variation in rural households' income strategies 74

Rural occupations and income sources 77

Household behavior when markets and governments fail: rational, despite appearances 82

Rural household asset positions: often low and unequal 84

Pervasive risks and costly responses 89

Smallholder challenges to compete 90

Conclusions 92

focus C: What are the links between agricultural production and food security? 94

Part II What are effective instruments for using agriculture for development? 96

4 Reforming trade, price, and subsidy policies 96

Agricultural protection and subsidies in developed countries 96

Agricultural taxation in developing countries 98

Simulated gains from trade liberalization 103

Scope for achieving potential gains 110

Transitional support 112

Public investment for long-term development 114

Conclusions 116

5 Bringing agriculture to the market 118

Food staples: improving commodity trading and risk management 118

Traditional bulk export commodities: maintaining international competitiveness 122

Higher-value urban markets: linking producers to modern supply chains 124

Higher-value exports: meeting product standards 128

Conclusion 133

focus D: Agribusiness for development 135

6 Supporting smallholder competitiveness through institutional innovations 138

Land policies for secure rights and reallocating resources 138

Financial services for smallholders 143

Insurance to manage risk 147

Developing efficient input markets	150
Producer organizations in a context of value chains and globalization	153
Institutional innovations—still a work in progress	157
7 Innovating through science and technology	158
Genetic improvement has been enormously successful, but not everywhere	159
Management and systems technologies need to complement genetic improvement	163
Investing more in R&D	165
Institutional arrangements to increase the efficiency and effectiveness of R&D systems	169
Using available technology better: extension and ICT innovations	172
Moving forward	176
<i>focus E: Capturing the benefits of genetically modified organisms for the poor</i>	<i>177</i>
8 Making agricultural systems more environmentally sustainable	180
Drivers of resource degradation	181
Improving agricultural water management	182
Greening the green revolution	188
Managing intensive livestock systems	189
Reversing degradation in less-favored areas	190
Payment for environmental services	197
Conclusions	199
<i>focus F: Adaptation to and mitigation of climate change in agriculture</i>	<i>200</i>
9 Moving beyond the farm	202
Rural employment: a daunting challenge	202
Agricultural wage employment	205
Rising rural nonfarm employment	209
Wages and earnings in the rural labor market	212
Labor supply: migration and the urban economy	214
Schooling, training, and transition to the labor market	216
Providing safety nets to reduce vulnerability	219
A final word on rural labor markets and migration: the need for policy attention	221
<i>focus G: Education and skills for rural development</i>	<i>222</i>
<i>focus H: The two-way links between agriculture and health</i>	<i>224</i>

Part III How can agriculture-for-development agendas best be implemented? 226

10 Emerging national agendas for agriculture's three worlds	226
New opportunities and challenges	226
The proposed approach	227
Agriculture-based countries—accelerating growth, poverty reduction, and food security	229
Transforming countries—reducing rural-urban income gaps and rural poverty	234
Urbanized countries—linking smallholders to the new food markets and providing good jobs	238
Political, administrative, and financial feasibility	242
Recognizing the policy dilemmas	243
11 Strengthening governance, from local to global	245
Changing roles: the state, the private sector, and civil society	246
Agricultural policy processes	248
Governance reforms for better policy implementation	251
Decentralization and local governance	254
Community-driven development	256
Aid effectiveness for agricultural programs	257
Progress on the global agenda	258
Moving forward on better governance for agriculture	265
Bibliographical note	266
Endnotes	269
References	285
Selected indicators	321
Selected agricultural and rural indicators	322
Selected world development indicators	333
Index	355

Boxes

- 1 What is the future for the global food supply? 8
- 1.1 Rural population dynamics 29
- 1.2 Cross-country evidence on the effect of agricultural growth on poverty reduction 30
- 1.3 Large countries have regional heterogeneity that replicates the three worlds of agriculture 33
- 1.4 Agriculture's comparative advantage in Sub-Saharan Africa 34
- 1.5 A role for agriculture in Africa's mineral-rich countries 35
- 1.6 Supporting farmers without a strong fiscal base: lessons from Thailand 36
- 2.1 The green revolution in food staples that didn't happen: Sub-Saharan Africa's variegated palette 55
- 2.2 Population density and the definitions of "rural" 58
- 2.3 Why are there lagging regions in countries with high agricultural growth? 59
- 2.4 The global environmental footprint of expanding livestock 61
- 2.5 Substantial potential for expanding irrigation in Sub-Saharan Africa—in the right way 65
- 3.1 Establishing the relative importance of the different pathways 75
- 3.2 Constructing comparable measures of income across countries 76
- 3.3 The challenge of drastic demographic changes from selective migration 81
- 3.4 Returning to the farm in Zambia—subsistence agriculture, AIDS, and economic crisis 86
- 3.5 New technologies and positive discrimination policies reduce social inequalities in India 88
- 3.6 Pastoralists' precarious livelihoods 89
- 3.7 Are farms becoming too small? 92
- 4.1 Types of instruments that distort trade 97
- 4.2 The political economy of agricultural reforms in developed countries 99
- 4.3 Nominal rates of assistance 100
- 4.4 Significant progress in reducing the antiagricultural bias in China and India 102
- 4.5 The political economy of agricultural reforms in developing countries 104
- 4.6 Simulating the effects of trade liberalization with global models 105
- 4.7 Net buyers and net sellers of food staples within a country 109
- 4.8 Examples of subsidies in India and Zambia 116
- 5.1 Impacts of road infrastructure on markets and productivity 120
- 5.2 Innovative uses of information technology to link farmers to markets in India and West Africa 121
- 5.3 Price stabilization through international trade: saving \$200 million in Bangladesh 123
- 5.4 Zambia and Burkina Faso: contrasting experiences in liberalizing domestic cotton markets 124
- 5.5 Linking small farmers to high-value chains: Three approaches 129
- 5.6 Employment gains and reduced poverty in rural Senegal 131
- 6.1 Benefits from community-driven land certification in Ethiopia 140
- 6.2 Improving the efficiency of land administration services in Georgia 141
- 6.3 How land rentals can increase productivity and equity in China 142
- 6.4 Rental markets and the impact of restrictions in India 143
- 6.5 Banrural SA: from ill-performing agrarian bank to profitable public-private financial institution 146
- 6.6 Mongolia's index-based livestock insurance 149
- 6.7 Is there a rationale for fertilizer subsidies? 152
- 6.8 Thriving rural input supply retailers as agrodealers in Africa 153
- 6.9 Producer organizations with international memberships 155
- 7.1 When zero means plenty: the benefits of zero tillage in South Asia's rice-wheat systems 164
- 7.2 Using legumes to improve soil fertility 165
- 7.3 Stronger IPRs in developing countries: effect on small farmers 167
- 7.4 Sub-Saharan Africa's agricultural R&D challenge 168
- 7.5 Long-term capacity development in Ghana 169
- 7.6 IPR options to give the poor access to modern science 171
- 7.7 Mexican farmers lead research through PRODUCE foundations 172
- 7.8 Adding value to a poor farmer's crop: cassava in Colombia and Ghana 173
- 7.9 Private agribusiness and NGOs: leading ICT provision to farmers in India 176
- 8.1 Restoring the northern Aral Sea—by doubling the Syr Darya's flow 185
- 8.2 Resource degradation in rice-wheat systems of South Asia 188
- 8.3 Integrated pest management to control the Andean potato weevil in Peru 189
- 8.4 Managing poultry intensification in Thailand 190

- 8.5 Four trajectories: disappearing or rebounding forests, misery or growth 193
- 8.6 Agroforestry parklands in Niger turn back the desert and restore livelihoods 194
- 8.7 Two tales of community-driven management, watersheds, and pastures 196
- 8.8 Managing drought and livestock in pastoral areas of the Middle East and North Africa 197
- 9.1 Horticulture development in Maharashtra 209
- 9.2 A women's cooperative in India 211
- 9.3 Child labor: pervasive in agriculture 219
- 9.4 The gradual but incomplete move toward cash-based food aid 220
- 10.1 Four policy objectives of the agriculture-for-development agenda form a policy diamond 228
- 10.2 Comprehensive Africa Agricultural Development Program 230
- 10.3 Middle East and North Africa—agriculture for jobs and as a safety net 235
- 10.4 Special features of agriculture in Europe and Central Asia 240
- 11.1 Conflicts over land displace millions in Colombia 246
- 11.2 Translating vision into practice: a former minister's view of Uganda's Plan for Modernizing Agriculture 249
- 11.3 Empowering producer organizations and developing a vision for agriculture in Senegal 250
- 11.4 Vietnam's progress in aligning budgets with sector priorities 251
- 11.5 Regional integration: opportunities and challenges in West Africa 251
- 11.6 Making a green revolution through vision and leadership 253
- 11.7 Delivering international public goods 262
- 11.8 Global financing for climate change adaptation and mitigation—the urgency of addressing the needs of vulnerable countries and small-scale farmers 263

Figures

- 1 The number of poor rose in South Asia and Sub-Saharan Africa from 1993 to 2002 (\$1-a-day poverty line) 3
- 2 Agriculture's contribution to growth and the rural share in poverty distinguishes three types of countries: agriculture-based, transforming, and urbanized 5
- 3 GDP growth originating in agriculture benefits the poorest half of the population substantially more 6
- 4 Public spending on agriculture is lowest in the agriculture-based countries, while their share of agriculture in GDP is highest 7
- 5 Developing countries are taxing agricultural exportables less 11
- 6 Domestic consumption and exports of high-value products in developing countries are growing rapidly 13
- 7 The yield gap for cereals between Sub-Saharan Africa and other regions has widened 15
- 8 Agriculture and deforestation are heavy contributors to greenhouse gas emissions 17
- 9 The four policy objectives of the agriculture-for-development agenda form a policy diamond 19
- 10 Agricultural growth in Sub-Saharan Africa has increased as macroeconomic conditions improved 20
- 11 The urban-rural income disparity has increased in most of the transforming countries 21
- 12 Agriculture-based and transforming countries get low scores for governance 23
- 1.1 Cereal yields are up and poverty is down in South Asia, but cereal yields and poverty were unchanged in Sub-Saharan Africa 27
- 1.2 As countries develop, the shares of GDP and labor in agriculture tend to decline, but with many idiosyncrasies 28
- 1.3 Agriculture-based, transforming, and urbanized countries constitute agriculture's three worlds 31
- 1.4 Price and wage effects dominated the long-run elasticity of rural poverty to cereal yields in India, 1958–94 33
- 1.5 The ratio of food processing to agricultural value added rises with incomes 37
- 1.6 Labor productivity has been a more important source of growth in agriculture than in nonagriculture, 1993–2005 39
- 1.7 Macroeconomic policy and agricultural growth have improved in Sub-Saharan Africa 40
- 1.8 Official development assistance to agriculture declined sharply between 1975 and 2004 41
- 2.1 Cereal yields rose, except in Sub-Saharan Africa 51
- 2.2 Modern inputs have expanded rapidly but have lagged in Sub-Saharan Africa 52
- 2.3 Growth in agricultural GDP per agricultural population is lowest in Sub-Saharan Africa 53
- 2.4 Stagnation in Sub-Saharan African agriculture may be over 54

- 2.5 There are big differences across regions in agricultural potential and access to markets 57
- 2.6 Per capita food consumption in developing countries is shifting to fruits and vegetables, meat, and oils 60
- 2.7 High value exports are expanding rapidly in developing countries 61
- 2.8 Slower growth in cereal and meat consumption is projected for the next 30 years 62
- 2.9 Developing countries will become even bigger markets for cereals exported largely by developed countries 63
- 2.10 Arable and permanent cropland per capita of the agricultural population is falling in Sub-Saharan Africa and South Asia 63
- 2.11 Water scarcity affects millions of people in Asia and the Middle East and North Africa 64
- 2.12 Growth rates of yields for major cereals are slowing in developing countries 67
- 2.13 Exploitable yield gaps are high for maize in Africa 67
- 3.1 Real per capita income varies widely for each livelihood strategy 77
- 3.2 In most countries, the vast majority of rural households participate in agriculture 78
- 3.3 Sources of income vary between poor and rich 79
- 3.4 Women's reported participation in agricultural self-employment relative to men's varies by region 80
- 3.5 Rural-urban gaps in educational attainment are large 84
- 3.6 Farm size distributions are often bimodal 87
- 3.7 Yields on small farms lag behind large farms in staples in Brazil and Chile 91
- 4.1 Progress has been slow in reducing overall support to agricultural producers in the OECD, but there has been some move to less-distorting "decoupled" payments 97
- 4.2 For agriculture-based countries, net agricultural taxation fell in 9 of 11 countries 100
- 4.3 Developing countries are taxing exportables less 101
- 4.4 For transforming countries, 9 of 10 either increased protection or reduced taxation 102
- 4.5 For urbanized countries, 6 of 7 either increased protection or reduced taxation 103
- 4.6 Estimated real international commodity price increases following complete trade liberalization 106
- 4.7 The corresponding gain in the estimated trade shares of developing countries 106
- 4.8 Latin America and Sub-Saharan Africa are expected to have higher agricultural output growth under global trade reforms 107
- 4.9 Subsidies have risen while public goods investments have declined in India 115
- 5.1 Layers of intermediaries characterize Ghana's maize markets 119
- 5.2 Wholesale prices in Ethiopia fluctuate within a wide import-export parity band 122
- 5.3 World prices for traditional bulk exports continue to decline 123
- 5.4 Food consumption expenditures in Indonesia are shifting from cereals to higher-value and prepared foods 125
- 5.5 Rising per capita incomes drive supermarket growth 125
- 5.6 Transport, handling, and packaging are major costs for French bean exports in Bangladesh 129
- 6.1 Credit-constrained rural households use fewer inputs and have lower incomes 144
- 6.2 Transport costs make up about one-third of the farmgate price of urea fertilizer in African countries, 2005 151
- 6.3 More than a third of Zambia's 2004/05 public budget for agriculture went to fertilizer subsidies 151
- 7.1 Improved varieties have been widely adopted, except in Sub-Saharan Africa 159
- 7.2 Estimated returns to agricultural R&D are high in all regions—averaging 43 percent 166
- 7.3 Financing for extension services, the traditional and the new approach 175
- 8.1 Dependence on groundwater irrigation is highest in the Middle East and South Asia 184
- 8.2 Groundwater aquifers in India are being depleted 186
- 8.3 With PES, degraded pasture has been converted to sustainable land use in Nicaragua 198
- 9.1 Agriculture is not enough to absorb new rural workers 203
- 9.2 The share of wage workers in agricultural employment rises with per capita income 205
- 9.3 The share of wage labor in agricultural employment is rising in many countries 206
- 9.4 Formal employment in Brazilian agriculture has become more cyclical 207
- 9.5 Labor requirements are considerably higher for vegetables than for cereals 209
- 9.6 Retail trade and services dominate nonfarm wage employment 210
- 9.7 Most rural nonfarm enterprises have only one or two workers, mostly self-employed, Indonesia, 2005 210
- 9.8 Wages are much higher in rural nonfarm employment than in agricultural employment in India, Mexico, and Uganda 212
- 9.9 For workers with no education, wages in agricultural and rural nonfarm employment are not so different across sectors 212
- 9.10 Agricultural wages have been declining in most Latin American countries 213
- 9.11 Agricultural wages have been rising in most Asian and African countries 214

9.12 Labor productivity in rural nonfarm self-employment is heterogeneous in Indonesia	215	10.2 Policy diamond for transforming countries	237
9.13 Growth of manufacturing and service employment in Mexico is a function of distance to an urban center with more than 250,000 inhabitants	215	10.3 Policy diamond for urbanized countries	241
9.14 Average years of education in rural areas, by age	216	11.1 Agriculture-based and transforming countries get low scores for governance	245
10.1 Policy diamond for agriculture-based countries	231	11.2 Good fits to country-specific conditions for demand-side and supply-side approaches are needed to improve agricultural sector governance	252

Tables

1 Characteristics of three country types, 2005	5	5.2 Public and private sector roles to enhance trade-related SPS compliance and quality management capacity	132
1.1 Demographic and economic characteristics of three country types, 2005	31	7.1 Total public agricultural R&D expenditures by region, 1981 and 2000	167
1.2 Poverty in three country types, 2002	32	7.2 Assets of public and private sectors in agribiotechnology research	171
1.3 Public spending in agriculture-based countries is low	41	7.3 Ways of providing and financing agricultural advisory services	174
3.1 Changing market participation among farming households in Vietnam	74	8.1 Agriculture's environmental problems onsite and offsite	181
3.2 Typology of rural households by livelihood strategies in three country types	76	9.1 Rural households' diverse sources of income	204
3.3 Changes in farm size and land distribution	87	9.2 Rural employment by sector of activity, selected countries	205
4.1 Nominal rates of assistance by commodity in developing countries	101	9.3 Average years of education of rural 18–25 year olds, selected countries	217
4.2 Estimated cost distribution of current trade policies	105	11.1 Types of global organizations and networks relevant for agriculture	261
4.3 Illustrative poverty effects from agricultural trade reform in developed and developing countries	108		
5.1 Public and private options for strengthening farmer links to the market	128		

Maps

2.1 Agroecological zones in agricultural areas	56	8.1 Overexploitation has caused severe water stress in many river basins	183
2.2 Market access in agricultural areas of Africa, Asia, and Latin America	56	8.2 Many deforestation hotspots are in tropical areas	192
