1	Introduction	460
2	Historical Outline	461
3	Biotechnological Conversion of Lignite to Liquid Products for the Energy and Chemical Sectors	461
3.1	Chemical versus Biotechnological Conversion	462
3.2	Chemical Lignite Conversion in Aqueous Solution	462
3.3	Enzymatically Induced, Chemical Coal Conversion	463
3.3.1	Solubilization Procedure	463
3.3.2	Chemical Analyses of Solubilized Coal	463
3.3.3	Preparation Tests with Solubilized Coal	465
3.4	Enzymatic Conversion of Coal into Liquids	467
3.5	Use of Biotechnologically Solubilized Lignite for Electricity Generation	468
3.6	Use of Biotechnologically Liquefied Lignite as Input Material in the Refinery Sector	469
4	Use of Biotechnologically Liquefied Lignite as Chemical Feedstock for the Production of Bioplastics	469
4.1	Reasons to Investigate the Conversion of Coal into PHAs	470
4.2	Screening of Laboratory Strains which Grow on Lignite Depolymerization Products and Convert them into PHAs	470
5	Outlook and Perspectives	472

1	Introduction	476
2	Historical Outline	476
3	Fuels	479
3.1	Solid Fuels	479
3.2	Liquid Fuels	481
3.3	Gaseous Fuels	483
3.3.1	Fixed-Bed Pressure Gasification	483
3.3.2	Fluid-Bed Gasification (Winkler Process)	484
3.3.3	Entrained-Flow Gasification (Koppers-Totzek process)	484
4	Tars	484
4.1	Hard Coal High-Temperature Tar	485
4.2	Brown Coal Low-Temperature Tar	485
4.2.1	Production	485
4.2.2	Brown-Coal Tar Processing	486
5	Chemical Feedstock	487
5.1	Paraffins	488
5.2	Phenols	489
5.3	Pyridines	489
5.4	Polycyclic Aromatics and Heteroaromatics	489
6	Other Products	489
6.1	Montan Wax	490
6.2	Humic Acids	490
7	Outlook and Perspectives	490
