PREFACE

1. General introduction	1
2. Effect of EC and transpiration on production of greenhouse tomato (<i>Lycopersicon esculentum</i> L.)	9
2.1 Introduction.....	9
2.2 Materials and methods	11
2.2.1 Treatments	11
2.2.2 Measurements.....	14
2.3 Results.....	15
2.3.1 Environment	15
2.3.2 Plant production.....	17
2.4 Discussion.....	22
2.5 Conclusion	24
3. Analysis of the effect of EC and potential transpiration on vegetative growth of tomato.....	25
3.1 Introduction.....	25
3.2 Materials and methods	26
3.2.1 Treatments	26
3.2.2 Measurements.....	28
3.3 Results.....	28
3.3.1 Vegetative development	28
3.3.2 Leaf area index (LAI).....	30
3.3.3 Weight	32
3.4 Discussion.....	33
3.4.1 Vegetative development	33
3.4.2 LAI and dry matter production.....	34
3.5 Conclusion	35
4. Growth of tomato fruits at contrasting root zone EC and potential transpiration.....	37
4.1 Introduction.....	37
4.2 Materials and methods	38
4.3 Results.....	39
4.3.1 Fruit size	39
4.3.2 Fruit growth rate	40
4.3.3 Fruit development period (FDP)	41
4.3.4 Dry matter accumulation into fruits	41
4.4 Discussion.....	42

4.5	Conclusion	44
5.	Response of tomato plants to a step-change in root-zone salinity under two different transpiration regimes.....	45
5.1	Introduction.....	45
5.2	Material and methods.....	46
5.3	Results.....	48
5.4	Discussion.....	51
5.4.1	Fruit growth.....	51
5.4.2	Fruit cracking.....	52
5.4.3	Vegetative growth	53
6.	Plant water relations as affected by EC of the nutrient solution and potential transpiration in tomato	55
6.1	Introduction.....	55
6.2	Materials and methods	57
6.2.1	Experimental set-up and treatments	57
6.2.2	Observation.....	59
6.3	Results.....	60
6.4	Discussion	64
6.4.1	Hydraulic resistance and plant water uptake	64
6.4.2	Fruit water potential and fruit growth	65
6.5	Conclusion	66
7.	General discussion	67
	References.....	75
	Summary.....	85
	Samenvatting.....	89
	摘要	93
