PART I. INTRODUCTION

Chapter 1. <i>Prehistoric Environment, Geography, and Ecology</i>	3
Introduction—Early research in the Pleistocene—The growth of interdisciplinary archeological work—Prehistoric geography and the natural sciences in theory—Environment and paleo-anthropology—Organization and objectives.	
Chapter 2. <i>Stratigraphy</i>	13
The place of the Pleistocene within the geological record—The “normal” climate of geological time—Ice Ages of the earlier geological record—Higher latitude cooling during the Cenozoic—The Plio-Pleistocene boundary—Continental stratigraphy of mid-latitude Europe—Coastal stratigraphy of the Mediterranean Sea and Morocco—Pleistocene stages.	
Chapter 3. <i>Dating and Absolute Chronology</i>	29
Introduction—Radiocarbon (C^{14}) dating—Sources of error in radiocarbon dating—Sample removal and suitability for radiocarbon dating—Potassium-Argon dating—Uranium series	

dating—The problem of Milankovitch's "radiation curve"—Other methods of absolute dating—Absolute dating applied to Pleistocene stratigraphy.

PART II. VEGETATION, SOILS, AND GEOMORPHOLOGY AS ENVIRONMENTAL INDICES

- Chapter 4. *The Zonal Concept* 49
Introduction—Vegetation and climate—Weathering and soil development—Zonal soils—External geomorphic processes as a function of climate—Natural regions.
- Chapter 5. *Vegetation and Climate* 62
Polar and alpine vegetation—Forests of middle latitudes—Vegetation of dry lands—Tropical vegetation—Vertical zonation of climate and vegetation.
- Chapter 6. *Soil Processes and Soil Types* 79
Soil profiles and horizons—Nutrient cycle, pH, and humus—Podsolization, calcification, and laterization—Arctic soil types—Forest soils of higher and middle latitudes—Mid-latitude grassland soils—Other semiarid and arid soils—Subtropical woodland soils—Tropical woodland soils—Vegetation and soil development.
- Chapter 7. *Glacial and Periglacial Geomorphology* 101
Glaciers past and present—Glacier regimen and movement—Development of mountain, valley, and piedmont glaciers—Development of continental glaciers—Implications of the climatic snowline—Concepts in periglacial geomorphology—Cold-climate phenomena—A synthesis of periglacial geomorphology.
- Chapter 8. *Humid, Arid, and Tropical Geomorphology* 126
Stream erosion and deposition—Humid zone geomorphology—Arid zone geomorphology—Tropical geomorphology.
- Chapter 9. *Mammalian and Human Distributions* 142
The concept of animal regions—Mammalian distributions in the major natural regions—Culture, technology, and the human resource base—Environmental resources for early food-collectors—Environmental resources for primitive agriculturalists.

PART III. INTERPRETATION OF PLEISTOCENE SEDIMENTS

Chapter 10. <i>Field and Laboratory Study of Sediments</i>	157
Introduction – Sediment deposition – Simple quantitative analyses – Field description of paleosols – Mechanical analyses in the laboratory – Chemical analyses in the laboratory.	
Chapter 11. <i>Stream and Lake Sediments</i>	178
Stream terraces – Alluviation due to glacial advance – Terraces due to periglacial alluviation – Pluvial alluviation in arid regions – Coastal streams and sea level fluctuations – Crustal instability and stream action – Lake and swamp beds – Interpretation of mineral or semiorganic lacustrine beds – Varve analysis – Spring deposits – Interpretation of organic sediments.	
Chapter 12. <i>Wind-borne and Slope Sediments</i>	192
Wind action – Features of wind erosion and abrasion – Bed load deposits: sand dunes – Suspended load deposits: loess and sand sheets – Aeolian deposits of volcanic origin – Slope deposits.	
Chapter 13. <i>Cave Sediments</i>	204
Introduction – Cave environments and sedimentation – Limestone detritus – Limestone precipitates: travertine – Residual clays and extraneous sediments – Organic deposits – Special sedimentary analyses – Conclusions and problems.	
Chapter 14. <i>Coastal Phenomena and Sea Level Fluctuations</i>	215
Introduction – Mechanisms of world sea level fluctuations – Evidence of high Pleistocene shorelines – Evidence of submerged Pleistocene shorelines – Glacio-eustatic stratigraphy.	
Chapter 15. <i>Geomorphological Study of Archeological Sites</i>	227
Geological classes of archeological sites – Alluvial sites – Lacustrine sites – Aeolian sites – Slope sites – Cave sites – Coastal sites – Surface sites – Geomorphology, surficial geology, and archeological sites.	

PART IV. CONTRIBUTIONS OF THE BIOLOGICAL SCIENCES

Chapter 16. *Palynology and Paleobotany* 243

General principles of pollen analysis—Field removal of samples for pollen examination—Laboratory preparation of samples—The pollen spectrum and pollen diagram—Difficulties in the interpretation of pollen profiles—Applications of pollen analysis—Macrobotanical remains—Tree-ring studies.

Chapter 17. *Paleontology and Paleotemperatures* 254

Introduction—Fossil preservation—Methods of study—Relative dating of bone by chemical analysis—Glacial and interglacial faunas of the European Upper Pleistocene—Stratigraphic aspects of Pleistocene mammalian faunas—Nonmammalian faunas—Paleotemperatures and deep-sea sediment cores.

PART V. SOME PLEISTOCENE ENVIRONMENTS OF THE OLD AND NEW WORLD

Chapter 18. *Mid-Latitude Europe during the Late Pleistocene* 271

Introduction—Existing reconstructions of last glacial climatic zones—Basic chronology of the last glacial in mid-latitude Europe—The Scandinavian, British, and Alpine glaciers—Nonglaciaded regions of western Europe—Nonglaciaded regions of central Europe—Southeastern Europe—Nonglaciaded European Russia—Full glacial moisture conditions—The geomorphic landscape of the Würm tundras of Europe—The nature of the open glacial vegetation—Physical conditions during the interstadial periods—Summary of pleniglacial climates in mid-latitude Europe.

Chapter 19. *The Mediterranean Region during the Late Pleistocene* 294

Introduction—Evidence of mountain glaciation—Late Pleistocene solifluction in the Mediterranean highlands—Paleobotanical evidence for the Würm period—

Faunal evidence from the late Pleistocene – Late Pleistocene fluvial phenomena in the Mediterranean lowlands – Retrospect of the Mediterranean ecozone during the late Pleistocene.

- Chapter 20. *Some African Environments of the Late Pleistocene* 312
The pluvial problem: Introduction – Late Pleistocene sequences of the northern Sahara – The Late Pleistocene history of the Nile Valley – Late Pleistocene environments of the Saharan Highlands – The Late Pleistocene record of the Senegal Delta and the Chad Basin – The nature of pluvials in the Saharan area – The high mountains of Ethiopia and East Africa – Pluvial evidence from the Omo-Rudolf Basin – Pluvials of the Kenya Rift Valley – The Kalambo Falls prehistoric sites – The late pleistocene of Lunda – The late Pleistocene of the Vaal - Oranje Basin – The pluvials of eastern and southern Africa – Conclusions.
- Chapter 21. *Late Pleistocene Environments of North America* 352
Introduction – Basic chronology of the Wisconsin Glacial – The Laurentide, Archipelago, and Greenland ice sheets – The Cordilleran glacier complex – Glacial lakes and spillways – “Pluvial” lakes of the Great Basin – Loess and sand plains – Periglacial phenomena – Palynological data for full glacial climates – Faunal evidence – Environmental conditions during the interstadials – Full glacial temperatures – Full glacial moisture conditions – Summary of climatic zonation during the Wisconsin Glacial maxima.
- Chapter 22. *Some Paleoclimatic Problems of the Interglacials* 376
Introduction – Geomorphologic evidence from Europe and Africa – The evidence of paleosols in Europe and Africa – Paleobotanical evidence from mid-latitude Europe – The Sangamon Interglacial in North America – Retrospect on interglacial climates.
- Chapter 23. *The Climatic Changes of the Pleistocene* 392
Introduction – Meteorological theory on Pleistocene atmospheric circulation – Climatic phases of the European Upper Pleistocene – Current problems in paleometeorological research.

PART VI. MAN-LAND RELATIONSHIPS IN PREHISTORY

- Chapter 24. *Early Subsistence and Settlement Patterns* 401
The scope of environmental analysis—Material manifestation of human culture—Classification of prehistoric cultures—Modern settlement patterns of primitive food-gatherers—Modern settlement patterns of advanced food-gatherers—Modern settlement patterns of specialized hunters and fishers—Modern settlement patterns of primitive agriculturists.
- Chapter 25. *Human Origins in Sub-Saharan Africa* 413
Introduction—Ape-men of the late Pliocene and early Pleistocene—Toolmaking and the case for "*Homo habilis*"—Habitat and ecology of the australopithecines—Environmental changes and australopithecine evolution—Significance of early Pleistocene hominids for the environment—The nature of an australopithecine site: Sterkfontein.
- Chapter 26. *Man-Land Relationships of Acheulian Hunter-Gatherers* 436
Toolmaking traditions of the early and middle Pleistocene—Fossil remains of mid-Pleistocene men—Further evidence of Acheulian technology—Acheulian culture versus technocomplex—Inferences about subsistence and settlement patterns—Man-land relationships—An example of an Acheulian living site: Torralba, Spain.
- Chapter 27. *The European Mousterians and Their Environment* 462
New centers of cultural activity in higher latitudes—Cultural patterns of the Mousterian—Environmental adaptation of the Mousterians—An example of Mousterian habitat and economy: Salzgitter-Lebenstedt.
- Chapter 28. *Upper Paleolithic Man-Land Relationships in Europe* 472
The appearance of advanced hunters in Europe—Upper Paleolithic technology—Upper Paleolithic economy—Upper Paleolithic settlement patterns in Eurasia—Man-land relationships of Upper Paleolithic populations.

Chapter 29. <i>The Paleo-Indians: Origins and Man-Land Relationships</i>	485
Introduction – Late Pleistocene environments of eastern Siberia – Siberian antecedents to New World colonization – The Beringian land bridge – An ice-free corridor in western Canada? – The Paleo-Indians – A Paleo-Indian site: Lehner – Mammalian extinctions and man – Pleistocene and recent adaptations in North America.	
Chapter 30. <i>Early Colonization of Australia</i>	516
Southeastern Asia: potential antecedents – Australia and Tasmania: late Pleistocene archeological evidence – The environment of the new continent – Man-land relationships.	
Chapter 31. <i>Environmental Change and Cultural Adaptation in Early Postglacial Europe</i>	526
Introduction – Environmental changes of the terminal Pleistocene – Early Postglacial vegetation change in Europe – Faunal change at the close of the Pleistocene – Cultural adaptation to new environments at the close of the Pleistocene – An example of Mesolithic habitat and economy: Star Carr, Yorkshire.	
Chapter 32. <i>Agricultural Origins in the Near East as a Geographical Problem</i>	541
Introduction – The Near East as a hearth of domestication – The natural habitat of the cereals – The natural habitat of the herd animals of the Near East – The natural habitat zone – Possible environmental changes in the Near Eastern area at the close of the Pleistocene – Archeological evidence of early agriculture and livestock-raising – The Near Eastern archeological record pertaining to early agriculture – The ecology of the Natufian in Palestine – Ecology of a village-farming community: Jarmo, northeastern Iraq – The desiccation theory of agricultural origins – Postscript.	
Chapter 33. <i>Agricultural Dispersals into Europe and Northern Africa</i>	566
Introduction – Economic motives for agricultural dispersal – Sauer's theory of agricultural diffusion from Southeast Asia – European climate during the Atlantic phase –	

Ecological aspects of early agricultural settlement in Europe – Saharan climate during the early and mid-Holocene – Mesolithic and Neolithic groups of the eastern Atlas and the Nubian Nile – Cattle nomads of the Saharan Neolithic – Potential impacts of food production on man-land relationships.

Chapter 34. <i>Agricultural Settlement and Urban Origins in the Near Eastern Floodplains</i>	599
The Near Eastern floodplains during the early agricultural settlement – Early urbanization in the Near Eastern floodplains – The significance of urbanization for man-land relationships – Retrospect on the significance of the environment for prehistoric man – Retrospect on the impact of man on the environment – General overview.	
Bibliography	613
Index	689
