Preface..... xi

Bacterial Microcompartments: Insights into the Structure,
Mechanism, and Engineering Applications 1

Sophia J. Tsai and Todd O. Yeates

I. Introduction 1

II. Bacterial Microcompartment Form and Function 2

III. Shell Proteins: Structures and Mechanisms..... 5

IV. Higher-Level Organization 9

V. Future Directions for Research and Design Applications..... 11

VI. Closing Remarks..... 16

References 16

Pili and Flagella: Biology, Structure, and Biotechnological
Applications. 21

Nani Van Gerven, Gabriel Waksman, and Han Remaut

I. Introduction 22

II. Pili in Gram-Negative Bacteria 23

III. Pili in Gram-Positive Bacteria 36

IV. Surface Filaments in Archaea..... 39

V. Flagella..... 41

VI. Applications..... 47

References 60

The Structure of Bacterial S-Layer Proteins 73

Tea Pavkov-Keller, Stefan Howorka, and Walter Keller

I. Introduction 74

II. *Geobacillus stearothermophilus* 80

III. *Clostridia* 88

IV. *Lactobacilli*..... 91

V. *Bacillus anthracis*..... 95

VI. <i>Lysinibacillus sphaericus</i>	99
VII. <i>Corynebacterium glutamicum</i>	103
VIII. <i>Deinococcus-Thermus</i>	104
IX. S-Layers from Gram-Negative Bacteria	110
X. Concluding Remarks.....	117
References.....	117

Spider Silk: Understanding the Structure–Function
Relationship of a Natural Fiber 131

Martin Humenik, Thomas Scheibel, and Andrew Smith

I. Synopsis	132
II. Spiders.....	133
III. Nomenclature of Silk Types.....	137
IV. Set-up of Silk Proteins.....	138
V. Major Ampullate Silk (aka Dragline Silk, Lifeline Silk) and Minor Ampullate Silk.....	141
VI. Flagelliform Silk (aka Capture Silk and Viscid Silk).....	161
VII. Pseudoflagelliform Silk and Cribellate Silk	163
VIII. Aciniform Silk.....	165
IX. Tubiliform Silk (aka Cylindriform Silk)	166
X. Egg Case Proteins	167
XI. Aggregate Silk (aka Glue).....	168
XII. Pyriform Silk	168
XIII. Silk Summary	169
XIV. Producing Recombinant Silk Proteins	170
XV. Future Outlook.....	175
References.....	177

Protein Modifications Giving Rise to
Homo-oligomers 187

Georg E. Schulz

I. Proteins as Building Blocks	187
II. Hetero- Versus Homo-oligomers	192
III. Symmetric Associations	192
IV. Lessons from Protein Crystallization	197
V. The Analysis of Known Protein–Protein Contacts	200
VI. Self-assembly in Nature.....	201
VII. Self-assembling Protein Constructs.....	202
VIII. Design of Protein–Protein Contacts	210
IX. Future Applications	224
References.....	225

Alpha-Helical Peptide Assemblies: Giving New Function to Designed Structures 231

Elizabeth H.C. Bromley and Kevin J. Channon

I. Introduction	232
II. Designing Discrete Helical Assemblies	238
III. Designing Higher-Order Helical Assemblies	258
IV. Overview and Future Outlook	268
References	270

Nanobiotechnology with S-Layer Proteins as Building Blocks 277

Uwe B. Sleytr, Bernhard Schuster, Eva M. Egelseer, Dietmar Pum, Christine M. Horejs, Rupert Tscheliessnig, and Nicola Ilk

I. Introduction	278
II. General Principles	279
III. Assembly and Morphogenesis of S-Layers	287
IV. S-Layers for the Production of Ultrafiltration Membranes	298
V. S-Layer as Matrix for the Immobilization of Functional Molecules and Nanoparticles	302
VI. S-Layer Fusion Proteins—Construction Principles and Applications.....	306
VII. S-Layers for Vaccine Development.....	317
VIII. S-Layers as Supporting Structure for Functional Lipid Membranes.....	320
IX. S-Layers as Matrix for Biomineralization	330
X. Conclusion and Perspectives	331
References	333

Viral Capsids as Self-Assembling Templates for New Materials 353

Michel T. Dedeo, Daniel T. Finley, and Matthew B. Francis

I. Introduction	354
II. Covalent Modification of Viral Capsids for Applications in Medical Imaging and Drug Delivery	359
III. Viral Capsids as Templates for the Construction of Inorganic Materials	370
IV. Capsid-Based Materials for Optical and Catalytic Applications	377
V. Summary and Future Challenges	384
References	386

Index.....	393
