

Table of contents

Chapter 1 Introduction.....	13
1.1 Outline of the thesis	14
1.2 Aim of the thesis	15
1.3 Soil as a habitat of microbial life	15
1.3.1 The vadose zone as an important soil compartment	17
1.3.2 Microbial activity in the vadose zone	18
1.3.3 Volatile contaminants in the vadose zone.....	20
1.4 Microbial degradation of vapor-phase contaminants in the vadose zone	22
1.5 Bacterial strategies influencing contaminant bioavailability.....	25
1.5.1 Bacterial chemotaxis.....	28
1.5.2 Ecological relevance of bacterial chemotaxis.....	29
 Chapter 2 Microbial growth on vapor-phase gradients of naphthalene.....	 32
2.1 Microbial growth with vapor-phase substrate.....	34
2.2 Walking the tightrope of bioavailability: Growth dynamics of PAH degraders on vapor-phase PAH	41
 Chapter 3 Microbial chemotaxis influenced by vapor-phase gradients of naphthalene.....	 65
3.1 Bacterial chemotaxis along vapor-phase gradients of naphthalene	67
3.2 Substrate consumption as detoxification mechanism allowing bacteria to position themselves at a location suitable for optimal activity	74
 Chapter 4 Final remarks.....	 84
4.1 The significance and practical implications of obtained results	85
4.2 Further research needs	91
 References.....	92
 Acknowledgements.....	98
Publication list	99
Curriculum Vitae	101
 Certificate of authorship	 102
