Acknowledgments	vii
1 Introduction	1
2 Metabolic innovation	18
3 Innovation through regulation	33
4 Novel molecules	47
5 The origins of evolutionary innovation	68
6 Genotype networks, self-organization, and natural selection	83
7 A synthesis of neutralism and selectionism	93
8 The role of robustness for innovation	107
9 Gene duplications and innovation	124
10 The role of recombination	132
11 Environmental change in adaptation and innovation	143
12 Evolutionary constraints and genotype spaces	158
13 Phenotypic plasticity and innovation	172
14 Towards continuous genotype spaces	186
15 Evolvable technology and innovation	198
16 Summary and outlook	214
