3.1.1	General numerical setup	24
3.1.2	Complex eigenvalue analysis of two hip replacement systems	26
3.1.3	Influence of material parameters	27
3.1.4	Towards realistic system properties: Including bone-like structures	27
3.2	Results	29
3.2.1	Influence of the friction coefficient on system A	29
3.2.2	Comparison of systems A and B	31
3.2.3	Results for changed Young's modulus and density	32
3.2.4	Critical friction coefficients with more realistic system characteristics	33
3.3	Discussion	39

4	Influence of other parameters on the dynamics and the post-bifurcation behavior of ball joints: A path continuation analysis.	43
4.1	Methods and materials	45
4.1.1	Ball joint model	45
4.1.2	Modifications for the use with continuation methods	47
4.1.3	Velocity dependent friction	48
4.1.4	A two degree of freedom pin-on-disk model	49
4.1.5	Applicability of continuation methods and expected results	49
4.2	Results	51
4.2.1	Planar system with Coulomb-type friction	51
4.2.2	Ball joint system with Coulomb-type friction	51
4.2.3	Planar system with Stribeck-type friction	54
4.2.4	Ball joint system with Stribeck-type friction	57
4.3	Discussion	60
