

Table of Contents

Inhaltsverzeichnis

1	Introduction	1
2	State of the Art	3
2.1	State of the glass optical components	3
2.1.1	Requirements on optical components	5
2.1.2	Conventional glass lens manufacturing	7
2.2	Precision glass molding technology	9
2.3	Form deviation and conventional compensation process	11
2.3.1	Definition of form deviation/thermal shrinkage	11
2.3.2	Conventional compensation	14
2.4	Relevant glass properties	15
2.4.1	Viscoelasticity and relaxation	15
2.4.2	Thermal expansion coefficient	20
2.4.3	Thermal conductivity	21
2.4.4	Specific heat capacity	23
2.4.5	Friction characteristics	24
2.5	Fundamentals of numerical simulation for forming processes	24
2.5.1	The Finite Element Method	24
2.5.2	Deformation simulation for metal forming	26
2.5.3	Deformation simulation for plastic injection molding	29
2.5.4	Deformation simulation for glass forming	31
3	Hypothesis and Research Objectives	37
3.1	Hypothesis	37
3.2	Pre-conditions	37
3.3	Goal	38
4	System Description and Containment Definition	39
4.1	System description (periphery)	39
4.2	System boundary	41
4.2.1	Structural aspect	42
4.2.2	Thermal aspect	43
4.2.3	Interaction effect and boundary influences	45
4.2.4	Analysis and compensation environment for geometry errors	48
5	Simulation Model Establishment	51
5.1	Selection of relaxation model for glass deformation	51
5.1.1	Relaxation model	52

5.1.2	Model for temperature dependence	57
5.2	General implementation procedure of the simulation model	58
5.2.1	Implementation of mechanical model	59
5.2.2	Implementation of thermal model	60
5.2.3	Multi-physics modeling	62
6	Measurement of Properties	65
6.1	Viscoelastic relaxation	67
6.1.1	Selection of measurement method	68
6.1.2	Measurement setup	69
6.1.3	Result and data analysis	70
6.2	Measurement of coefficient of thermal expansion	76
6.2.1	Measurement methods for CTE	77
6.2.2	Measurement setup	79
6.2.3	Measurement procedure and result	82
6.3	Friction characteristics	84
6.3.1	Measurement methods for friction coefficient	85
6.3.2	Experimental setup for friction coefficient	87
6.3.3	Finite Element Method	89
6.3.4	Experiment result and data analysis	89
6.4	Determination of thermal conductivity	93
6.4.1	General measurement methods for thermal conductivity	93
6.4.2	Comparative measurement method and experimental layout	95
6.4.3	Experiment result	97
6.5	Short summary	99
7	Simulation Model Validation	101
7.1	Simulation for a concave glass lens with closed mold design	101
7.1.1	Introduction	101
7.1.2	Simulation procedure	103
7.1.3	Result analysis	103
7.1.4	Validation of material property measurement	104
7.2	Convex glass lens with open mold design	106
7.2.1	Introduction	106
7.2.2	Design of experiments	107
7.2.3	Simulation procedure	109
7.2.4	Result analysis	110
7.3	Other application examples	112
7.3.1	Ultra-thin lens	112

7.3.2	Cylindrical lens array	114
7.3.3	Freeform lens.....	116
7.4	Simulation for other molding process.....	118
7.4.1	Background.....	118
7.4.2	Simulation procedure.....	119
7.4.3	Result analysis.....	120
8	Overall Summary and outlook.....	123
9	Literature	125
10	Appendix	141
10.1	Theoretical appendix	141
10.1.1	Summary of different material models	141
10.1.2	Laplace transformations	160
10.2	Implementation example of the multi-physic model in ANSYS.....	163
10.2.1	Implementation of mechanical model	163
10.2.2	Implementation of thermal model	169
10.2.3	Multi-physics modeling	171
10.3	Key properties of the measurement reference material Pyrex 7740	172
10.4	Refractive index prediction performed by SU	172
