ACKNOWLEDGEMENTS	v
INTRODUCTION	i
<i>R. J. Chorley, Department of Geography, Cambridge University and</i> <i>R. W. Kates, Graduate School of Geography, Clark University</i>	
1. 'Physical' and 'human' geography	i
2. Water as a focus of geographical interest	3
References	6
I. THE WORLD	
I. THE WORLD HYDROLOGICAL CYCLE	ii
<i>R. G. Barry, Department of Geography, Southampton University</i> <i>Present Affiliation: University of Colorado</i>	
1. Global water and the components of the hydrological cycle	ii
2. Evaporation	13
3. Atmospheric moisture	13
4. Precipitation	18
5. Water circulation in the atmosphere	18
6. Water circulation in the lithosphere	21
7. The global water balance	24
8. Global water circulation in relation to the energy budget	25
9. Climatic change and the global water budget	26
References	28
II. WORLD WATER INVENTORY AND CONTROL	31
<i>R. L. Nace, U.S. Geological Survey</i>	
1. Significance of world inventory	31
2. Oceanic water	33
3. Water aloft	33
4. Rivers	33
A. Total discharge	34
B. Channel storage	35
5. Wide places in rivers	36
6. Inland seas	37

7. Life fluid of the vegetable kingdom	37
8. Biological water	38
9. Unseen reservoirs	38
10. Global refrigeration system	39
11. Possibilities for control	40
References	42
 III. WORLD EROSION AND SEDIMENTATION	43
<i>D. R. Stoddart, Department of Geography, Cambridge University</i>	
1. Contemporary erosion: magnitude and patterns	43
2. Contemporary sedimentation	51
A. Deltas	51
B. Continental shelves and slopes	55
C. Deep ocean floor	59
3. Erosion and sedimentation in the geologic record	61
References	63
 2. THE BASIN	
 I. THE BASIN HYDROLOGICAL CYCLE	67
<i>Rosemary J. More, Formerly of Department of Civil Engineering, Imperial College, London University</i>	
1. Introduction	67
2. Natural analogues and hardware models	70
3. Synthetic systems	71
4. Partial systems and the 'black box'	73
References	75
 II. THE DRAINAGE BASIN AS THE FUNDAMENTAL GEOMORPHIC UNIT	77
<i>R. J. Chorley, Department of Geography, Cambridge University</i>	
1. Morphometric units	77
2. Linear aspects of the basin	78
3. Areal aspects of the basin	85
4. Relief aspects of the basin	89
5. Some considerations of scale	97
References	98
 III. THE DRAINAGE BASIN AS AN HISTORICAL BASIS FOR HUMAN ACTIVITY	101
<i>C. T. Smith, Department of Geography, Cambridge University</i>	
1. The drainage basin as a unit of historical development	101
2. Irrigation and the unity of the drainage basin	107
References	110

3. PRECIPITATION

I(i).	PRECIPITATION	113
	<i>R. G. Barry, Department of Geography, Southampton University</i>	
	<i>Present Affiliation: University of Colorado</i>	
1.	General categories	113
2.	The precipitation mechanism	114
3.	Genetic types	114
	A. 'Convective type' precipitation	115
	B. 'Cyclonic type' precipitation	115
	C. Orographic precipitation	115
4.	Precipitation characteristics	117
	A. Intensity	117
	B. Frequency	118
	C. Areal extent	118
5.	Precipitation statistics	119
	A. The average	119
	B. Dispersion about the average	119
	C. Relative variability	120
	D. Probability	122
6.	Dryness and wetness	122
7.	Precipitation characteristics in different macroclimates	123
	A. Annual totals and the annual regime	123
	B. Diurnal regime	125
	C. Frequency and intensity characteristics	126
	References	128
I(ii).	THE ASSESSMENT OF PRECIPITATION	130
	<i>John C. Rodda, Institute of Hydrology, Wallingford</i>	
	References	134
II.	THE ROLE OF WATER IN ROCK DISINTEGRATION	135
	<i>R. J. Chorley, Department of Geography, Cambridge University</i>	
1.	Some properties of water	135
2.	Weathering of igneous minerals and rocks	138
3.	Weathering of sedimentary rocks	145
4.	The weathered mantle	151
	References	155
III.	THE INTERACTION OF PRECIPITATION AND MAN	157
	<i>R. J. Chorley, Department of Geography, Cambridge University and</i>	
	<i>Rosemary J. More, Formerly of Department of Civil Engineering,</i>	
	<i>Imperial College, London University</i>	
1.	Man's intervention in the hydrological cycle	157
