Direktor: Prof. Dr. Dr. Gerd Geißlinger**

Role of thrombocytes in the development of inflammatory hyperalgesia

**Dissertation
zur Erlangung des Doktorgrades der Medizin
des Fachbereichs Medizin
der Johann Wolfgang Goethe-Universität
Frankfurt am Main**

**vorgelegt von
Jing Suo
aus Shijiazhuang, Volksrepublik China**

Frankfurt am Main, 2014

Index

1	Introduction	1
1.1	Processing of peripheral noxious stimuli.....	1
1.2	Mechanisms of inflammatory pain.....	2
1.3	Mediators involved in peripheral sensitization.....	4
1.4	Immune cells involved in peripheral sensitization.....	8
1.5	Thesis aims.....	12
2	Materials and Methods.....	13
2.1	Animals.....	13
2.2	Materials.....	13
2.3	Assessment of the nociceptive thresholds.....	14
2.4	Assessment of paw edema sizes.....	15
2.5	Mouse tail vein injection.....	16
2.6	Mouse intraperitoneal injection.....	16
2.7	Mouse intraplantar injection.....	16
2.8	Isolation of immune cells from paw edema and FACS labelling and measuring.....	17
2.9	Isolation of immune cells from blood and FACS labeling and Measuring.....	18
2.10	Isolation of macrophages for FACS sorting.....	19
2.11	TxB4 staining in murine platelets.....	19
2.12	Data acquisition by Multi-Epitope-Ligand cartography	20
2.13	Liquid chromatography coupled to tandem mass spectrometry.....	21
2.14	Haematological analysis.....	22
2.15	Statistics.....	22

Index

3	Results.....	23
3.1	Zymosan-induced inflammation causes mechanical allodynia and edema formation.....	23
3.2	Investigation of the role of neutrophils in zymosan-induced inflammation.....	26
3.3	Investigation of the role of macrophage-platelet interaction in zymosan-induced inflammation.....	49
4	Discussion.....	62
5	References.....	71
6	Summary.....	84
7	Deutsche Zusammenfassung.....	85
8	Abbreviations	86
9	Own Publications.....	88
