Preface	vii
1 Introduction	1
1.1 Challenges for Environmental Economics	3
1.2 The Point of Departure	5
1.3 Methodological Aspects	6
1.4 Overview	7
I Positive Theory	13
2 Aggregation of Dynamic Systems	15
2.1 Review of Related Studies	17
2.1.1 Static Aggregation Problems	17
2.1.2 Dynamic Aggregation Problems	18
2.2 Aggregation of Ecological Systems	19
2.2.1 Assumptions and Definitions	21
2.2.2 Aggregation of All State Variables into One Aggregate . .	23
2.2.3 Several Aggregates	26
2.2.4 Further Generalizations	30
2.3 Caveats of Aggregation	30
2.4 Examples	32
2.4.1 Aggregation in Models of Air and Water Quality	33
2.4.2 Aggregation of Population Dynamics Models	34
2.4.3 Inconsistent Aggregation: A Numeric Example	36
2.5 Conclusion	39
3 Physical Constraints	43
3.1 Physical Constraints	44
3.2 Production	46
3.2.1 A Physically Consistent Model of the Firm	46

3.2.2	Implications of Physical Constraints	48
3.3	Consumption	51
3.4	General Equilibrium	52
3.4.1	A General Equilibrium Model with Physical Constraints	52
3.4.2	Existence and Optimality of General Equilibrium with Physical Constraints	54
3.5	Physical Constraints and Interactions between the Economy and the Environment	56
3.5.1	The Structure of Emissions and Resource Use in an Equilibrium with Physical Constraints	56
3.5.2	Environmental Policy under Physical Constraints	58
3.6	Examples	61
3.6.1	A First Example	61
3.6.2	A Second Example	63
3.7	Conclusion	66
4	Stochastic Intertemporal Duality	69
4.1	The Model	71
4.2	Assumptions and Definitions	73
4.3	Intertemporal Duality	73
4.4	Imposing Further Restrictions	82
4.4.1	Homogeneity	82
4.4.2	Inada Conditions	83
4.4.3	General Curvature Conditions	84
4.5	Example	84
4.6	Conclusion	86
5	Modeling Economic Dynamics	89
5.1	The Model	90
5.2	Approximating the Model	93
5.3	Concluding Remarks	98
II	Normative Theory	101
6	Normative Economics and Political Philosophy	103
6.1	Economic Concepts of Normative Analysis	104
6.1.1	The Representative Individual	105
6.1.2	Non-Aggregated Approaches	107
6.1.3	Consequences	109
6.2	Concepts of Distributive Justice	110

6.2.1	Utilitarianism	111
6.2.2	Welfarism	113
6.2.3	The Egalitarian Approach	114
6.2.4	Libertarian Theories	117
6.2.5	Discussion	120
7	Intertemporal Justice and Sustainability	125
7.1	Intertemporal Justice	126
7.1.1	Potential Persons	126
7.1.2	The Number and Identity of Future Persons	127
7.1.3	Uncertainty	129
7.1.4	Summary	131
7.2	Sustainability	131
7.2.1	Welfare Based Concepts of Sustainability	131
7.2.2	Resource Based Concepts of Sustainability	133
7.3	Discussion	134
7.3.1	Parallels to Distributive Justice	134
7.3.2	Comparison and Discussion of the Concepts of Sustainability	136
7.4	Conclusion	139
8	Defining Sustainability	141
8.1	Focusing the Problem	142
8.2	Defining Sustainability	143
8.2.1	The Main Idea	144
8.2.2	The Basic Model	144
8.2.3	The Basic Model With Uncertainty	147
8.2.4	The Definition of Sustainability	148
8.3	Discussion	150
8.4	The Relation to Existing Definitions of Sustainability	152
8.5	Conclusion	154
9	Consequences and Conclusions	155
9.1	Results and Implications	155
9.1.1	Implications for Environmental Economics	156
9.1.2	Methodological Contributions of This Work	158
9.2	A Research Strategy for Environmental Economics	159
9.2.1	Modeling	160
9.2.2	Coupling the Model	165
9.2.3	Analyzing the Model	167
9.2.4	Summary	173

9.3	Environmental Economics and Environmental Policy	174
9.4	Final Remarks	177
		179
Bibliography
