

Chang Shu

Differential Quadrature and Its Application in Engineering

Springer

Table of Contents

1	Mathematical Fundamentals of Differential Quadrature Method: Linear Vector Space Analysis and Function Approximation	1
1.1	Introduction.....	1
1.2	Derivative Approximation by Differential Quadrature (DQ) Method	3
1.2.1	Integral Quadrature.....	4
1.2.2	Differential Quadrature.....	5
1.3	Analysis of A Linear Vector Space	6
1.3.1	Definition of A Linear Vector Space	6
1.3.2	Properties of A Linear Vector Space	8
1.4	Solution of Partial Differential Equations (PDEs) and Function Approximation	11
1.4.1	Two Basic Types of Solution for PDEs	11
1.4.2	High Order Polynomial Approximation.....	13
1.4.3	Fourier Series Expansion	18
1.4.3.1	General Function.....	18
1.4.3.2	Even Function	21
1.4.3.3	Odd Function	23
2	Polynomial-based Differential Quadrature (PDQ)	25
2.1	Introduction.....	25
2.2	Computation of Weighting Coefficients for the First Order Derivative	26
2.2.1	Bellman's Approaches	26
2.2.2	Quan and Chang's Approach	28
2.2.3	Shu's General Approach	29
2.3	Computation of Weighting Coefficients for the Second and Higher Order Derivatives	32
2.3.1	Weighting Coefficients of the Second Order Derivative	32
2.3.2	Shu's Recurrence Formulation for Higher Order Derivatives	34
2.3.3	Matrix Multiplication Approach	36
2.4	Error Analysis	38
2.4.1	The Function Approximation	38
2.4.2	The Derivative Approximation	40

2.5	Relationship Between PDQ and Other Approaches	44
2.5.1	Relationship Between PDQ and Finite Difference Scheme	44
2.5.1.1	Generation of Finite Difference Scheme.....	44
2.5.1.2	Relationship Between PDQ and Highest Order Finite Difference Scheme.....	48
2.5.2	Relationship Between PDQ and Chebyshev Collocation Method	52
2.6	Extension to the Multi-dimensional Case	55
2.6.1	Direct Extension for Regular Domain	55
2.6.2	Differential Cubature Method.....	60
2.7	Specific Results for Typical Grid Point Distributions	62
2.7.1	Uniform Grid	62
2.7.2	Chebyshev-Gauss-Lobatto Grid.....	63
2.7.3	Coordinates of Grid Points Chosen as the Roots of Chebyshev Polynomial.....	64
2.8	Generation of Low Order Finite Difference Schemes by PDQ	65
3	Fourier Expansion-based Differential Quadrature (FDQ).....	69
3.1	Introduction	69
3.2	Cosine Expansion-based Differential Quadrature (CDQ) for Even Functions	70
3.3	Sine Expansion-based Differential Quadrature (SDQ) for Odd Functions.....	81
3.4	Fourier Expansion-based Differential Quadrature (FDQ) for Any General Function.....	86
3.5	Some Properties of Fourier Expansion-based Differential Quadrature	91
4	Some Properties of DQ Weighting Coefficient Matrices	95
4.1	Introduction	95
4.2	Determinant and Rank of DQ Weighting Coefficient Matrices.....	96
4.2.1	Definition and Properties of Determinant and Rank.....	96
4.2.2	Determinant and Rank of DQ Weighting Coefficient Matrices.....	98
4.3	Structures and Properties of DQ Weighting Coefficient Matrices	100
4.3.1	Definition of Centrosymmetric and Skew Centrosymmetric Matrices	101
4.3.2	Properties of Centrosymmetric and Skew Centrosymmetric Matrices	102
4.3.2.1	Properties of Centrosymmetric Matrices.....	102

4.3.2.2	Properties of Skew Centrosymmetric Matrices	105
4.3.3	Structures of DQ Weighting Coefficient Matrices	107
4.3.3.1	Structure of First Order DQ Weighting Coefficient Matrix	107
4.3.3.2	Structures of Higher Order DQ Weighting Coefficient Matrices	109
4.4	Effect of Grid Point Distribution on Eigenvalues of DQ Discretization Matrices	110
4.4.1	Stability of Ordinary Differential Equations	111
4.4.2	Eigenvalues of Some Specific DQ Discretization Matrices	112
4.4.2.1	The Convection Operator	112
4.4.2.2	The Diffusion Operator	117
4.4.2.3	The Convection-Diffusion Operator	119
4.5	Effect of Grid Point Distribution on Magnitude of DQ Weighting Coefficients	120
5	Solution Techniques for DQ Resultant Equations	123
5.1	Introduction	123
5.2	Solution Techniques for DQ Ordinary Differential Equations	124
5.3	Solution Techniques for DQ Algebraic Equations	128
5.3.1	Direct Methods	130
5.3.2	Iterative Methods	134
5.3.2.1	Iterative Methods for Conventional System	134
5.3.2.2	Iterative Methods for Lyapunov System	137
5.4	Implementation of Boundary Conditions	140
5.5	Sample Applications of DQ Method	143
5.5.1	Burgers Equation	143
5.5.2	Two-dimensional Poisson Equation	145
5.5.3	Helmholtz Eigenvalue Problem	148
6	Application of Differential Quadrature Method to Solve Incompressible Navier-Stokes Equations	153
6.1	Introduction	153
6.2	Governing Equations	154
6.2.1	Dimensional Form	154
6.2.2	Non-dimensional Form	157
6.2.3	Vorticity-Stream Function Formulation	159
6.3	Solution of Vorticity-Stream Function Formulation	160
6.3.1	Discretization of Governing Equations	160
6.3.2	Implementation of Boundary Conditions	161

6.3.2.1	Implementation of Boundary Condition for Vorticity	162
6.3.2.2	Implementation of Boundary Condition for Stream Function	162
6.3.2.3	Implementation of Boundary Condition for Temperature	167
6.3.3	Solution Procedures.....	168
6.3.4	Some Numerical Examples.....	170
6.3.4.1	The Flow Past A Circular Cylinder.....	170
6.3.4.2	The Natural Convection in A Concentric Annulus	172
6.4	Solution of Incompressible Navier-Stokes Equations in Primitive Variable Form.....	175
6.4.1	Introduction	175
6.4.2	Pressure Correction Method	176
6.4.3	Two Approaches to Specify Boundary Condition for p' and to Enforce Continuity Condition on the Boundary	178
6.4.3.1	Approach 1	178
6.4.3.2	Approach 2	180
6.4.4	Computational Sequence	181
6.4.5	Sample Application and Comments on the Two Approaches..	182
6.4.5.1	Importance of Enforcing Continuity Condition on the Boundary	182
6.4.5.2	Comments on Performance of Two Approaches.....	184
7	Application of Differential Quadrature Method to Structural and Vibration Analysis	186
7.1	Introduction	186
7.2	Differential Quadrature Analysis of Beams.....	188
7.2.1	Governing Equations and Boundary Conditions.....	188
7.2.2	Numerical Discretization	189
7.2.3	Implementation of Boundary Conditions.....	190
7.2.3.1	The δ -technique	190
7.2.3.2	Modification of Weighting Coefficient Matrices	191
7.2.3.3	Direct Substitution of Boundary Conditions into Discrete Governing Equations	194
7.2.4	Numerical Example: Free Vibration Analysis of A Uniform Beam.....	196
7.3	Differential Quadrature Analysis of Thin Plates	197
7.3.1	Governing Equations and Boundary Conditions.....	197
7.3.2	Numerical Discretization	199

7.3.3	Implementation of Boundary Conditions.....	200
7.3.3.1	The δ -technique	200
7.3.3.2	Modification of Weighting Coefficient Matrices	201
7.3.3.3	Direct Substitution of Boundary Conditions into Discrete Governing Equations	202
7.3.3.4	General Approach	205
7.3.4	Numerical Example: Free Vibration Analysis of Square Plates	207
7.4	Differential Quadrature Analysis of Shells	209
7.4.1	Governing Equations and Boundary Conditions	209
7.4.2	Numerical Discretization	218
7.4.3	Implementation of Boundary Conditions	219
7.4.4	Numerical Example: Free Vibration Analysis of A Composite Laminated Conical Shell	222
8	Miscellaneous Applications of Differential Quadrature Method	224
8.1	Introduction	224
8.2	Application to Heat Transfer	224
8.3	Application to Chemical Reactor	228
8.4	Application to Lubrication Problems	232
8.5	Application to Waveguide Analysis	235
8.6	Solution of the Helmholtz Equation	239
8.7	Effect of Mesh Point Distribution on Accuracy of DQ Results	242
9	Application of Differential Quadrature to Complex Problems	245
9.1	Introduction	245
9.2	Multi-domain DQ Method	245
9.2.1	Topology of Interface	246
9.2.1.1	Patched Interface	246
9.2.1.2	Overlapped Interface	248
9.2.2	Multi-domain DQ Application in Fluid Mechanics	249
9.2.3	Multi-domain DQ Application in Solid Mechanics	251
9.2.4	Multi-domain DQ Application in Waveguide Analysis	252
9.3	DQ Application in Curvilinear Coordinate System	254
9.3.1	Coordinate Transformation	254
9.3.2	DQ Simulation of Incompressible Flows in Irregular Domains	256
9.3.3	DQ Vibration Analysis of Irregular Plates	260
9.3.3.1	Partial Transformation	260

9.3.3.2	Complete Transformation	261
9.3.3.3	Implementation of Boundary Conditions	262
9.3.3.4	Sample Application.....	264
9.4	Differential Cubature Method for Complex Problems	266
10	Generalized Integral Quadrature (GIQ) And Its Application to Solve Boundary Layer Equations	267
10.1	Introduction.....	267
10.2	Generalized Integral Quadrature (GIQ).....	268
10.2.1	One-dimensional Generalized Integral Quadrature.....	268
10.2.2	Error Analysis.....	271
10.2.3	Extension to Multi-dimensional Cases.....	272
10.2.4	Sample Application of GIQ Method.....	273
10.3	DQ-GIQ Algorithm to Solve Boundary Layer Equations.....	275
10.3.1	Stream Function as Dependent Variable.....	275
10.3.2	Primitive Variables as Dependent Variables	277
10.4	Steady Boundary Layer Solutions	279
10.4.1	One-dimensional Case	279
10.4.2	Two-dimensional Case	280
10.4.3	Three-dimensional Case	281
10.5	Unsteady Boundary Layer Solutions	285
Appendices		
A.	A Fortran Program for Simulation of Natural Convection in A Square Cavity	288
B.	A Fortran Program for Vibration Analysis of Rectangular Plates	305
C.	A Fortran Program for L-Shaped Waveguide Analysis by Multi-domain DQ Method.....	315
