BEHÄLTER- UND ROHRLEITUNGSBAU E.V.**

| <b>Contents</b>                                                                                                       | <b>Page</b> |
|-----------------------------------------------------------------------------------------------------------------------|-------------|
| 1. Scope .....                                                                                                        | 11          |
| 1.1 Piping .....                                                                                                      | 11          |
| 1.2 Components .....                                                                                                  | 11          |
| 1.3 Materials .....                                                                                                   | 11          |
| 1.4 Fabrication and testing .....                                                                                     | 12          |
| 2. Symbols, definition and units .....                                                                                | 12          |
| 2.1 Latin letters .....                                                                                               | 12          |
| 2.2 Greek letters .....                                                                                               | 16          |
| 2.3 Indicators at head .....                                                                                          | 16          |
| 3. Determination of allowable stresses .....                                                                          | 17          |
| 3.1 Design stress $S_m$ .....                                                                                         | 17          |
| 3.1.1 Determination of design stress $S_m$ .....                                                                      | 17          |
| 3.1.2 Exceptions .....                                                                                                | 17          |
| 3.1.3 Design stress $S_m$ at test pressure .....                                                                      | 17          |
| 3.1.4 Design strength values .....                                                                                    | 18          |
| 3.2 Allowable secondary stress range $S_a$ .....                                                                      | 18          |
| 4. Dimensioning .....                                                                                                 | 18          |
| 4.1 Symbols .....                                                                                                     | 19          |
| 4.2 Design dimensions .....                                                                                           | 19          |
| 4.3 Dimensioning for internal pressure .....                                                                          | 26          |
| 4.3.1 General .....                                                                                                   | 26          |
| 4.3.2 Straight pipes .....                                                                                            | 26          |
| 4.3.3 Pipe bends .....                                                                                                | 26          |
| 4.3.4 Mitre bends .....                                                                                               | 26          |
| 4.3.5 Branches with cylindrical body .....                                                                            | 27          |
| 4.3.6 Branches with spherical body .....                                                                              | 27          |
| 4.3.7 Conical transitions .....                                                                                       | 27          |
| 4.3.8 Dished and hemispherical ends .....                                                                             | 27          |
| 4.3.9 Flat ends .....                                                                                                 | 27          |
| 4.3.10 Flanges .....                                                                                                  | 27          |
| 4.3.11 Bolts for flanged joints .....                                                                                 | 27          |
| 4.4 Dimensioning for external pressure .....                                                                          | 28          |
| 4.4.1 General .....                                                                                                   | 28          |
| 4.4.2 Straight pipes .....                                                                                            | 28          |
| 4.4.3 Pipe bends .....                                                                                                | 28          |
| 4.4.4 Mitre bends .....                                                                                               | 28          |
| 4.4.5 Branches (intersections) with cylindrical body .....                                                            | 28          |
| 4.4.6 Branches (intersections) with spherical body .....                                                              | 28          |
| 5. Design of piping components subject to cyclic loading by pulsating internal pressure and temperature changes ..... | 29          |
| 5.1 Components with cylindrical body .....                                                                            | 29          |

| <b>Contents</b>                               | <b>Page</b> |
|-----------------------------------------------|-------------|
| 5.2 Components with spherical body.....       | 29          |
| 6. Loads .....                                | 30          |
| 6.1 Main primary loads .....                  | 30          |
| 6.2 Additional primary loads .....            | 30          |
| 6.3 Secondary loads .....                     | 30          |
| 6.4 Support loads .....                       | 31          |
| 7. Supporting conditions.....                 | 31          |
| 7.1 Restraints.....                           | 32          |
| 7.2 Partial restraints .....                  | 32          |
| 7.3 Elastic connection of components .....    | 32          |
| 7.4 Variable supports .....                   | 33          |
| 7.5 Constant supports .....                   | 33          |
| 7.6 Shock absorbers and sway braces .....     | 33          |
| 7.7 Hinged struts .....                       | 34          |
| 7.8 Influence of friction .....               | 34          |
| 8. Load cases .....                           | 35          |
| 8.1 Assembly conditions .....                 | 35          |
| 8.2 Final assembly condition .....            | 35          |
| 8.3 Pressure testing .....                    | 35          |
| 8.4 Cleaning (acid-cleaning and rinsing)..... | 36          |
| 8.5 Blow-out.....                             | 36          |
| 8.6 Operating cases.....                      | 37          |
| 8.7 Relaxation .....                          | 37          |
| 8.8 Cold springing .....                      | 38          |
| 8.8.1 Exact calculation .....                 | 38          |
| 8.8.2 Calculation by approximation .....      | 38          |
| 9. System analysis .....                      | 39          |
| 9.1 General .....                             | 39          |
| 9.2 System geometry.....                      | 39          |
| 9.3 Mechanical properties of materials .....  | 39          |
| 9.4 Rigidities .....                          | 39          |
