

Contents

1	INTRODUCTION	1
1.1	The Lax–Milgram Lemma	1
1.1.1	Preliminaries	1
1.1.2	Classical Version	3
1.1.3	General Version	7
1.2	Examples of Mixed Formulations	10
1.2.1	A One-Dimensional Model	10
1.2.2	A Model in $\mathbb{R}^n$	14
1.3	Traces and Green’s Identities	16
1.3.1	Traces of $H^1(\Omega)$	17
1.3.2	The Space $H^{1/2}(\Gamma)$	18
1.3.3	Integration by Parts and Green’s Identities	19
1.3.4	Normal Traces of $H(\text{div}; \Omega)$	21
2	BABUŠKA–BREZZI THEORY	27
2.1	Operator Equation	27
2.2	The inf-sup Condition	28
2.3	Main Result	30
2.4	Application Examples	34
2.4.1	Poisson Problem	34
2.4.2	Poisson Problem with Mixed Boundary Conditions	36
2.4.3	Linear Elasticity Problem	40
2.4.4	Primal-Mixed Formulation of Poisson Problem	51
2.5	Galerkin Scheme	53
3	RAVIART-THOMAS SPACES	61
3.1	Preliminary Results	61
3.2	Spaces of Polynomials	66
3.3	Local Raviart–Thomas Spaces	68

3.4	Interpolation in $H(\text{div}; \Omega)$	71
3.4.1	Local and Global Interpolation Operators	71
3.4.2	Piola Transformation	74
3.4.3	Deny–Lions, Bramble–Hilbert, and Related Results	78
3.4.4	Interpolation Errors	84
4	MIXED FINITE ELEMENT METHODS	93
4.1	Projection Operators	93
4.2	Poisson Problem	99
4.3	Primal-Mixed Formulation of Poisson Problem	103
4.4	Poisson Problem with Neumann Boundary Conditions	111
4.5	Linear Elasticity Problem	121
