PREFACE	xiii
ACKNOWLEDGMENTS	xv
INTRODUCTION	xvii
PART 1. METHODOLOGICAL BASES	1
CHAPTER 1. EXTRACTION AND SEGMENTATION OF STRUCTURES IN IMAGE SEQUENCES	3
Olivier BERNARD, Patrick CLARYSSE, Thomas DIETENBECK, Denis FRIBOULET, Stéphanie JEHAN-BESSON and Jérôme POUSIN	
1.1. Problematics	3
1.2. Overview of segmentation methods	3
1.3. Summary of the different classes of deformable models	6
1.3.1. Non-energy approaches	7
1.3.2. Energy-based approaches	8
1.4. Deformable templates	11
1.4.1. Elastic deformable template principle	12
1.4.2. Dynamic elastic deformable template	14
1.4.3. Elastic deformable template and modal analysis	15
1.4.4. The elastic deformable template in practice	15
1.5. Variational active contours	17
1.5.1. Active contour representations	17
1.5.2. Energy functional	21
1.5.3. Obtaining the evolution equation	26
1.5.4. Level set digital implementation	34

1.6. Integration of <i>a priori</i> constraints in the formalism of variational contours	35
1.6.1. Shape <i>a priori</i>	36
1.6.2. Motion <i>a priori</i>	38
1.7. Implementation examples in cardiac imaging	44
1.7.1. Echographic imaging: choice of the data fitting term	44
1.7.2. Example of 3D echocardiography image segmentation	46
1.7.3. Example of 2D echocardiography image segmentation	48
1.8. Conclusion	50
1.9. Bibliography	52
 CHAPTER 2. MOTION ESTIMATION AND ANALYSIS	 65
Patrick CLARYSSE and Jérôme POUSIN	
2.1. Problematics	65
2.2. Problem formulation	66
2.3. Transport methods	67
2.3.1. Optical flow	68
2.3.2. Motion estimation seen as an optimal transport problem	70
2.4. Probabilistic approaches	74
2.5. Image registration	76
2.5.1. Transformation	77
2.5.2. Similarity function	78
2.5.3. Optimization	78
2.5.4. Practical considerations	79
2.6. Local methods	79
2.6.1. Block or primitive-matching	79
2.6.2. Least-square estimation	81
2.7. Hybrid methods	81
2.7.1. Power spectrum-based methods	82
2.7.2. Spatiotemporal description	82
2.8. Phase-based methods	84
2.8.1. Fleet and Jepson's method	85
2.8.2. Analytic and monogenic signal	86
2.8.3. Harmonic phase methods	88
2.9. Registration and motion estimation in a sequence of images	89
2.9.1. Lagrangian description	89
2.9.2. Eulerian description	91
2.9.3. Strategies for the estimation in sequence	91
2.10. Evaluation of motion estimation methods	92
2.11. Conclusion	95
2.12. Bibliography	95

CHAPTER 3. POST-PROCESSING AND ANALYSIS OF DYNAMIC MAGNETIC RESONANCE IMAGES FOR MYOCARDIAL PERFUSION QUANTIFICATION	103
Bruno NEYRAN and Magalie VIALLO	
3.1. Introduction	103
3.2. Dynamic measurement of perfusion with contrast agents: reminder about the MRI sequences and the different contrast agents used	107
3.2.1. Brief reminder about cardiac perfusion MRI sequences	107
3.2.2. MRI signal conversion/tracer concentration	107
3.2.3. Different clinical-candidate contrast agents	108
3.3. Motion correction and contour segmentation of the myocardium: important preprocessing prior to quantitative analysis	109
3.3.1. Dynamic image registration	109
3.3.2. Automatic contour extraction	109
3.4. Semi-quantitative perfusion analysis: calculation of relative parameters depending on the injection of the contrast medium	110
3.4.1. Semi-quantitative perfusion parameters	110
3.4.2. Heuristic modeling using a varied gamma function	112
3.4.3. Heuristic modeling with a bi-exponential function	114
3.4.4. Heuristic modeling with the Moate model	115
3.5. Absolute parameters independent of the contrast agent injection (taking account of the arterial input): pharmacokinetic modeling	117
3.5.1. General studies: tracer kinetics theory	118
3.5.2. Identification of the residual function	127
3.5.3. Identification of the discrete residual function	129
3.6. Conclusion	133
3.7. Bibliography	135
CHAPTER 4. TENSOR DECOMPOSITION OF A DYNAMIC SEQUENCE OF IMAGES INTO SIMPLE ELEMENTS	141
Frédérique FROUIN and Claire PELLOT-BARAKAT	
4.1. Problematics	141
4.2. Panorama of methods for the quantitative analysis of dynamic image sequences	143
4.2.1. Regions of interest method	143
4.2.2. Parametric imaging methods	144
4.2.3. Movement analysis methods	145

4.2.4. Tensor decomposition of a sequence of images into simple elements	145
4.3. Tensor decomposition methods of an image sequence into simple elements	146
4.3.1. Notations and decomposition principle	146
4.3.2. Orthogonal decomposition of an image sequence	147
4.3.3. Decomposition into simple elements	148
4.4. Specifications for radiotracer or contrast medium monitoring	149
4.4.1. Proposed approach objectives and associated constraints definition	149
4.4.2. Components estimation principle	149
4.4.3. Example of tensor decomposition into simple elements in myocardial perfusion studies	152
4.4.4. Limitations of the proposed approach	153
4.4.5. Clinical applications of the tensor decomposition into simple elements for cardiac imaging	155
4.5. Specifications for the study of cardiac motion	156
4.5.1. Proposed approach objectives and associated constraint definition	156
4.5.2. Tensor decomposition method solution	157
4.5.3. Tensor decomposition model extensions	160
4.5.4. Clinical applications and perspectives	164
4.6. Conclusion	165
4.7. Bibliography	166
PART 2. APPLICATION EXAMPLES	169
CHAPTER 5. EVALUATION OF CARDIAC STRUCTURE SEGMENTATION IN CINE MAGNETIC RESONANCE IMAGING . . .	171
Alain LALANDE, Mireille GARREAU and Frédérique FROUIN	
5.1. Context: significance of the automatic segmentation of the cardiac structures	171
5.1.1. Cine MRI in short-axis orientation	171
5.1.2. Left ventricle and right ventricle	172
5.2. Evaluation necessity	175
5.2.1. The place of evaluation	175
5.2.2. Analytic and empirical methods	176
5.3. Empirical evaluation methods	177
5.4. Visual evaluation methods	179
5.5. Supervised methods	180
5.5.1. The definition of a reference	180

5.5.2. Creation of an expert database	183
5.5.3. Evaluation criterion: edge-based approaches	184
5.5.4. Evaluation criteria: region-based approaches	188
5.5.5. Supervised methods for the estimation of a clinical parameter	192
5.5.6. ROC curves	193
5.5.7. Comparison of the supervised methods	194
5.5.8. Limitations of the supervised methods	195
5.6. Non-supervised evaluation methods	198
5.6.1. Unsupervised methods relying on region- or edge-based descriptors	198
5.6.2. Methods using a clinical parameter	202
5.6.3. Estimation methods of a reference segmentation	204
5.6.4. Difficulties in unsupervised methods	205
5.7. Conclusion	205
5.8. IMPEIC and MEDIEVAL working groups	207
5.9. Bibliography	209

CHAPTER 6. PHASE-BASED HEART MOTION ESTIMATION IN MULTIMODALITY CARDIAC IMAGING

217

Martino ALESSANDRINI, Adrian BASARAB, Olivier BERNARD
and Philippe DELACHARTRE

6.1. Phase images	218
6.1.1. Multidimensional analytic signals	218
6.1.2. Monogenic signal	219
6.2. Optical flow motion estimation on the phase of the two single-orthant analytic signals and using a deformable mesh: application to cardiac MRI sequences	221
6.2.1. Optical flow method applied to spatial phase images	223
6.2.2. Parametric modeling of local motion	226
6.2.3. Trajectory estimation	228
6.2.4. Results	230
6.2.5. Conclusion	235
6.3. Motion estimation by optical flow from the monogenic phase using a local affine model and multiscale analysis – application to ultrasonic cardiac sequences	236
6.3.1. Affine model	237
6.3.2. Multiscale choice of the window size	238
6.3.3. Iterative refinement of the displacement	238
6.4. Bibliography	244

CHAPTER 7. CARDIAC MOTION ANALYSIS IN TAGGED MRI	247
Patrick CLARYSSE and Pierre CROISILLE	
7.1. Motion quantification by the <i>SinMod</i> method	248
7.2. Processing pipeline and features of the software <i>inTag</i>	250
7.2.1. Data and input parameters	251
7.2.2. Motion field estimation	251
7.2.3. LV contour extraction	252
7.2.4. LV motion and deformation analysis	252
7.3. Perspectives	254
7.4. Bibliography	254
 CHAPTER 8. LEFT VENTRICLE MOTION ESTIMATION IN COMPUTED TOMOGRAPHY IMAGING	257
Antoine SIMON, Mireille GARREAU, Régis DELAUNAY, Dominique BOULMIER, Erwan DONAL and Christophe LECLERCQ	
8.1. Introduction	257
8.1.1. Clinical problem and objectives	257
8.1.2. Technological choice: cardiac CT imaging	258
8.1.3. State of the art and method positioning	259
8.2. Surface matching method	262
8.2.1. Surface segmentation and reconstruction stage	262
8.2.2. Surface–surface matching	263
8.3. Surface–surface approach evaluation	267
8.3.1. Simulated data	267
8.3.2. Real data	270
8.4. Surface–surface approach conclusion	278
8.5. Surface and volume matching method: surface–volume approach	278
8.6. Surface–volume approach evaluation	280
8.6.1. Simulated data	280
8.6.2. Real data	283
8.7. Conclusion	285
8.8. Acknowledgments	287
8.9. Bibliography	287

PART 3 . TOWARD PATIENT-SPECIFIC CARDIOLOGY 293
**CHAPTER 9. PERSONALIZATION OF ELECTROMECHANICAL
MODELS OF THE CARDIAC VENTRICULAR FUNCTION BY
HETEROGENEOUS CLINICAL DATA ASSIMILATION 295**

Stephanie MARCHESSEAU, Maxime SERMESANT, Florence BILLET,
Hervé DELINGETTE and Nicholas AYACHE

9.1. Introduction	295
9.2. Anatomy and electrophysiology personalization from clinical data	298
9.2.1. Personalization of the heart and the tissue structure anatomy	298
9.2.2. Cardiac electrophysiology personalization	300
9.3. Heart mechanics modeling	302
9.3.1. Modeling of the Bestel–Clément–Sorine electromechanical coupling	302
9.3.2. Blood flow modeling	304
9.3.3. Other boundary conditions	305
9.3.4. Discussion about this model	306
9.4. Image data processing: cardiac kinematics personalization . . .	306
9.4.1. Metrics for the comparison between observed and simulated motion	307
9.4.2. Data time interpolation	307
9.4.3. Deformable models approach	308
9.4.4. Data displacement case	310
9.4.5. Velocity data case	311
9.4.6. Results with cine-MRI data	311
9.4.7. Results from dynamic CT data	312
9.5. Calibration of the mechanical parameters from global data . . .	313
9.5.1. Available data description	314
9.5.2. Unscented transform calibration	315
9.5.3. Calibration results with healthy volunteers	317
9.5.4. Calibration results with pathological cases	317
9.6. Mechanical personalization by variational data assimilation . . .	318
9.6.1. Variational approach on a simplified model	320
9.6.2. Application to synthetic cases	321
9.6.3. Application to clinical cases	322
9.6.4. Sequential approach on full model	322

9.7. Conclusion	323
9.8. Bibliography	324
CONCLUSION	331
