

FACHBEREICH PHYSIK
BERGISCHE UNIVERSITÄT
GESAMTHOCHSCHULE WUPPERTAL

Production of π^+ , K^+ and p in light and heavy quark hadronic Z decays

Dissertation
zur Erlangung des Doktorgrades des Fachbereichs Physik
der Bergischen Universität Wuppertal

Mario Reale

Bergische Universität - GHS Wuppertal

WUB-DIS 96-24
December 1996

Contents

1	Introduction	1
1.1	Summary of this Thesis	1
2	Theoretical Mainframe	3
2.1	Short Presentation of the Standard Model	3
2.1.1	Electromagnetism and Weak Forces : The Electroweak Unification . . .	3
2.1.2	Quantum Chromodynamics	5
2.1.3	The QCD running coupling constant	8
2.2	The Standard Model : Summary	10
2.3	Current description of hadronic Z decays	10
2.3.1	Matrix Element Model	13
2.3.2	Parton Shower Model	15
2.4	Fragmentation Models	18
2.4.1	The String Model and the JETSET MonteCarlo Program	19
2.4.2	The Cluster Model and the HERWIG MonteCarlo Program	21
2.4.3	The Modified Leading Log Approximation in the Local Parton-Hadron Duality Ansatz	22
2.4.3.1	MLLA	22
2.4.3.2	Local Parton-Hadron Duality	23
3	The DELPHI experiment	25
3.1	Introduction	25
3.2	Tracking Detectors	26
3.2.1	The Microvertex Detector (VD)	26
3.2.2	The Inner Detector (ID)	27
3.2.3	The Time Projection Chamber (TPC)	28
3.2.4	The Outer Detector (OD)	28
3.2.5	The Forward Chamber A (FCA)	29
3.2.6	The Forward Chamber B (FCB)	29
3.2.7	Combined Tracking Performances	29
3.3	The RICH (Particle Identification) detectors	30
3.4	Energy Measurement Detectors	30
3.4.1	The High-Density Projection Chamber (HPC)	30
3.4.2	The Forward Electromagnetic Calorimeter (FEMC)	31
3.4.3	The Hadron Calorimeter (HAC)	32
3.5	Scintillators	33
3.5.1	The Time of Flight Detector (TOF)	33

3.5.2	The Forward Hodoscope (HOF)	33
3.6	The Muon Chambers	33
3.6.1	The Barrel Muon Chambers (MUB)	33
3.6.2	The Forward Muon Chambers (MUF)	33
3.7	Luminosity Measurement Detectors	34
3.7.1	The Small Angle Tile Calorimeter (STIC)	34
3.7.2	The Very Small Angle Tagger (VSAT)	34
3.8	Trigger	34
3.9	Data Handling and Detector Running	37
3.9.1	The DELPHI Data Acquisition	37
3.9.2	DAS Control System	38
3.9.3	Slow Controls System	38
4	The Barrel Ring Imaging CHerenkov Detector (RICH) in DELPHI	41
4.1	Introduction	41
4.2	Basic Operating Principle	42
4.3	BRICH Detector general description	44
4.4	The Vessel	48
4.5	The Drift Tube	49
4.6	The Liquid Radiator	50
4.7	The Gas Radiator	50
4.8	The MultiWire Proportional Chambers	51
4.9	The Mirrors	51
4.10	The Calibration system	52
4.11	Cleaning, monitor, alignment and identification performances	52
4.11.1	Cleaning of the electronic signal	52
4.11.2	Alignment of the BRICH detector	54
4.11.3	Identification Performances	56
5	The Time Projection Chamber	59
5.1	General Description	59
5.2	The TPC Multi Wire Proportional Chambers and Read out	62
5.3	Measure of the specific ionization (dE/dx)	62
6	Charged Hadron Identification	65
6.1	Probabilities	65
6.2	HADSIGN: merging dE/dx and Cherenkov information	66
6.3	RIBMEAN algorithm	67
6.4	RINGSCAN algorithm	67
6.5	Other Cherenkov Angle reconstruction programs	69
6.5.1	NNRIB algorithm	69
6.5.2	DETAL algorithm	69
7	The Analysis : hadronic and b quark flavour tags	71
7.1	Introduction	71
7.2	The π^+ , K^+ and p identification tag	72
7.2.1	(dE/dx) tag	72
7.2.2	(RICH) tag	72

7.2.3	Efficiency, Purity and (dE/dx) fits	74
7.3	The Analysis Method	76
7.3.1	Hadronic Events and Tracks selection	78
7.4	The DELPHI b -quark tagging program	79
8	Results	89
8.1	Introduction	89
8.2	Results	90
8.2.1	ξ_p^* values and ξ_E distributions for π^+ , K^+ , p in b and uds quark events	90
8.2.2	Rapidity, x_p , p , p_t^{in} and p_t^{out} production spectra	104
8.2.3	π^+ , $K^\pm$ and p multiplicities	105
8.3	Systematic Error Analysis	108
9	Summary and Conclusions	123
9.1	Summary	123
9.2	Conclusions	123
9.3	Aknowledgments	125
