

Table of contents

Chapter 1

1. Introduction	1
1.1 The Cytoskeleton	1
1.1.1 The Cytoskeleton	1
1.1.2 The Actin Cytoskeleton	2
1.1.3 Actin in Neuron	4
1.1.4 Synaptic Cytoskeleton	5
1.1.4.1 Organization of presynaptic actin	6
1.1.4.2 Organization of postsynaptic actin	6
1.2 Actin binding proteins	8
1.3 Cyclase associated protein (CAP)	9
1.4 Aim of research	12

Chapter 2

2. Results	13
2.1 Generation of CAP2 knockout mice	13
2.2 CAP2 is expressed in cortex, hippocampus and cerebellum	14
2.3 Mutant mice do not show gross anatomical difference in brain	17
2.4 CAP2 localizes to dendrites, presynaptic and postsynaptic terminal	17
2.5 Altered spine density in CAP2 mutant neurons	19
2.6 Altered dendritic complexity in CAP2 mutant neurons	22
2.7 Actin filament turnover is impaired in CAP2 deficient neurons	25
2.8 CAP1 does not compensate the loss of CAP2 in brain	29
2.9 CAP2 mutant neurons show reduce density of surface dendritic GluR1	29
2.10 CAP2 regulates synaptic actin dynamics	32
2.11 CAP2 interacts with n-cofilin	34
2.12 CAP2 affects phosphorylated n-cofilin levels and leads to its aggregation	37
2.13 CAP2 interacting partners in neurons	41

Chapter 3

3. Discussion	43
3.1 CAP2: Role in neuronal development	43
3.2 CAP2: Role in presynaptic terminal	44
3.3 CAP2: Role in postsynaptic terminal	45
3.4 CAP2 interacts with n-cofilin	46
3.5 CAP2 and neurological disorder: Future perspective	47

Chapter 4

4. Materials and Methods	50
4.1. Materials	50
4.1.1 Enzymes for molecular biology	50
4.1.2 Antibodies	50
4.1.3 Antibiotics	51
4.1.4 Reagents	51
4.1.5 Kits	52
4.1.6 Bacterial host strain	53
4.1.7 Media for <i>E.coli</i> culture	53
4.1.8 SOC medium	53
4.1.9 Eukaryotic cells	53
4.1.10 Media for cell culture	54
4.1.11 Oligonucleotides	54
4.1.12 Buffers and other solutions	55
4.2. Methods	56
4.2.1 Analysis of mutant mice	56
4.2.1.1 Transgenic animals	56
4.2.1.2 Genotyping of mice	56
4.2.1.3 Immunohistochemistry and histology	57
4.2.1.4 X-gal staining	57
4.2.1.5 Nissl staining	57
4.2.1.6 Golgi-Cox staining	58
4.2.2 Cell culture techniques	58

4.2.2.1 Passage of cells, trypsinization and determination of cell number	58
4.2.2.2 Thawing cells	59
4.2.2.3 Freezing cells	59
4.2.2.4 Differentiation of cells	59
4.2.2.5 Primary cortical neuron culture	59
4.2.2.6 Transfection and immunofluorescence	60
4.2.3 Morphometric analysis of Purkinje neurons	60
4.2.3.1 Vibratome section of brain	60
4.2.3.2 Labeling of Purkinje neurons	61
4.2.3.3 Imaging of Purkinje neurons	61
4.2.4 Biochemical assay	61
4.2.4.1 Synaptosome preparation	61
4.2.4.2 Determination of the F/G-actin ratio	62
4.2.4.3 KCl depolarization assay	62
4.2.4.4 Surface biotinylation assay	62
4.2.4.5 Induction of chemical LTP	63
4.2.5 Protein analysis methods	63
4.2.5.1 Extraction of protein from cells	63
4.2.5.2 Extraction of protein from mouse tissue	63
4.2.5.3 Measurement of protein concentration	64
4.2.5.4 P-cofilin and LIMK analysis	64
4.2.5.5 SDS-polyacrylamide gel electrophoresis and western blot analysis	64
4.2.6 Protein-Protein interaction	65
4.2.6.1 Cofilin depletion assay	65
4.2.6.2 Expression of different domains of CAP2	65
4.2.6.3 Pull-down assay	66
4.2.6.4 Immunoprecipitation using GFP trap beads	66
4.2.7 Molecular biology techniques	67
4.2.7.1 Plasmid-DNA isolation from <i>E.coli</i> by alkaline lysis (miniprep)	67
4.2.7.2 Plasmid-DNA isolation with a kit from Macherey-Nagel	67
4.2.7.3 DNA agarose gel electrophoresis	67
4.2.7.4 Elution of DNA fragments from agarose gels	68

4.2.7.5 Measurement of DNA concentrations	68
4.2.7.6 Restriction digestion of DNA	68
4.2.7.7 Polymerase chain reaction (PCR)	68
4.2.7.8 Cloning of Rab GDI beta	69
4.2.7.9 Transformation of E.coli cells with plasmid DNA	69
4.2.8 Miscellaneous methods	69
4.2.8.1 Computer programs	69
4.2.8.2 Statistical analysis	69
