

Outline

Preliminary remarks on the status of the present paper	4
Acknowledgements	4
1 Introduction	5
- Mapping and Assessment of ecosystem services in the framework of the implementation of the European Biodiversity Strategy	5
- Development of approaches for nationwide assessment of ecosystem services in Germany	5
- Supplement to landscape planning at the level of states, regions and municipalities	7
2 Proposals for indicators of ecosystem services at the federal level	8
2.1 Indicators of provisioning services	8
2.1.1 Natural fertility of arable soils – agricultural plant production	12
2.1.2 Proportion of grasslands in agricultural areas – animal production	15
2.1.3 Timber stocks – timber production	16
2.2 Indicators of regulation services	18
2.2.1 Self-cleaning potential of waterways	18
2.2.2 Protection of groundwater quality	21
2.2.3 Erosion mitigation	24
2.2.4 Mitigation of flood hazard by water retention in floodplains	27
2.2.5 Pollination and biological pest control – natural and semi-natural areas and small structures in agricultural landscapes	30
2.2.6 Reduction of greenhouse gas emissions (in particular rewetting of peat soils)	32
2.2.7 Microclimatic buffering and balancing features and air filter effect of urban green areas	33
2.3 Indicators of cultural ecosystem services	35
- Problems related to a lack of common definitions	35
- Initial focus on recreation combined with nature experience and aesthetics	38
2.3.1 Suitability of the countryside for recreation	37
2.3.2 Suitability of urban areas for recreation	40
- Supplement through a representative sample set for supply and demand of recreational areas	41
3. Notes on selected questions – information regarding the further development of indicators	41
3.1 Requirements on the accuracy of collection and analysis: warning system or contribution to a welfare index	41
3.2 Indicators for conditions and/or development opportunities of ecosystem services	42
3.3 Consideration of supply and demand	42
3.4 Current, future or potential services	43
3.5 Differentiating between ecosystem service and product	43
3.6 Intermediate and final ecosystem services - avoid double counting	44
3.7 Use of simple or complex data modelling	44
3.8 Previously unrecognized ecosystem services	45
