Preface	xix
Acknowledgements	xxiii
About the Authors	xxv
1 Concepts	1
1.1 Definition and Development of Supramolecular Chemistry	2
1.1.1 What is Supramolecular Chemistry?	2
1.1.2 Host–Guest Chemistry	3
1.1.3 Development	4
1.2 Classification of Supramolecular Host–Guest Compounds	6
1.3 Receptors, Coordination and the Lock and Key Analogy	8
1.4 The Chelate and Macrocyclic Effects	9
1.5 Preorganisation and Complementarity	13
1.6 Thermodynamic and Kinetic Selectivity	14
1.7 Nature of Supramolecular Interactions	19
1.7.1 Ion–Ion Interactions	20
1.7.2 Ion–Dipole Interactions	21
1.7.3 Dipole–Dipole Interactions	22
1.7.4 Hydrogen Bonding	22
1.7.5 Cation– π Interactions	24
1.7.6 π – π Stacking	26
1.7.7 van der Waals Forces	28
1.7.8 Close Packing in the Solid State	28
1.7.9 Hydrophobic Effects	29

1.8	Supramolecular Host Design	31
	Study Problems	32
	References	33
2	The Supramolecular Chemistry of Life	35
2.1	Alkali Metal Cations in Biochemistry	37
2.1.1	Membrane Potentials	37
2.1.2	Membrane Transport	39
2.1.3	Rhodopsin: A Supramolecular Photonic Device	47
2.2	Porphyrins and Tetrapyrrole Macrocycles	48
2.3	Supramolecular Features of Plant Photosynthesis	50
2.3.1	The Role of Magnesium Tetrapyrrole Complexes	50
2.3.2	Manganese-Catalysed Oxidation of Water to Oxygen	55
2.4	Uptake and Transport of Oxygen by Haemoglobin	58
2.5	Coenzyme B₁₂	65
2.6	Neurotransmitters and Hormones	68
2.7	DNA	69
2.7.1	DNA Structure and Function	69
2.7.2	Site-Directed Mutagenesis	75
2.7.3	The Polymerase Chain Reaction	77
2.7.4	Binding to DNA	78
2.8	Biochemical Self-Assembly	82
2.9	Viagra®: Beyond the Hype	84
	Study Problems	85
	References	86

3	Cation-Binding Hosts	87
3.1	The Crown Ethers	88
3.1.1	Discovery and Scope	88
3.1.2	Synthesis	90
3.2	Lariat Ethers and Podands	91
3.2.1	Podands	91
3.2.2	Lariat Ethers	95
3.2.3	Bibracchial Lariat Ethers	97
3.3	Cryptands	98
3.4	The Spherands	101
3.5	Nomenclature	105
3.6	Solution Behaviour	107
3.6.1	Solubility Properties	107
3.6.2	Solution Applications	109
3.7	Selectivity of Cation Complexation	113
3.7.1	General Considerations	113
3.7.2	Crown Ethers	114
3.7.3	Lariat Ethers	119
3.7.4	Cryptands	121
3.8	The Macrocyclic, Macrobicyclic and Template Effects	123
3.8.1	The Macrocyclic Effect	123
3.8.2	The Template Effect	125
3.8.3	High-Dilution Synthesis	129
3.8.4	[2 + 2] Cyclocondensation	131
3.9	Preorganisation and Complementarity	133
3.9.1	Thermodynamic Effects	133
3.9.2	Kinetic and Dynamic Effects	140
3.10	Soft Ligands for Soft Metal Ions	141
3.10.1	Heterocrowns	143
3.10.2	Heterocryptands	146
3.10.3	Mixed Cryptates	147
3.10.4	Schiff's Bases	149

3.11	Complexation of Organic Cations	152
3.11.1	Binding of Ammonium Cations by Corands	153
3.11.2	Binding of Ammonium Cations by Three-Dimensional Hosts	156
3.11.3	Ditopic Receptors	156
3.11.4	Chiral Recognition	161
3.11.5	Amphiphilic Receptors	164
3.11.6	Case Study: Herbicide Receptors	165
3.12	Alkalides and Electrides	167
3.13	The Calixarenes	169
3.13.1	Cation Complexation by Calixarenes	172
3.13.2	Phase Transport Equilibria	177
3.13.3	Cation Complexation by Hybrid Calixarenes	179
3.14	Carbon Donor and π-acid Ligands	183
3.14.1	Mixed C-Heteroatom Hosts	183
3.14.2	Hydrocarbon Hosts	185
3.15	The Siderophores	187
3.15.1	Naturally Occurring Siderophores	187
3.15.2	Synthetic Systems	189
	Study Problems	191
	Thought Experiment	192
	References	193
4	Binding of Anions	197
4.1	Introduction	198
4.2	Biological Anion Receptors	200
4.2.1	Phosphate and Sulphate Binding Proteins	201
4.2.2	Arginine as an Anion Binding Site	202
4.2.3	Carboxypeptidase A	203
4.3	Concepts in Anion Host Design	204
4.4	From Cation Hosts to Anion Hosts—a Simple Change in pH	206
4.4.1	Tetrahedral Receptors	206
4.4.2	Shape Selectivity	209

4.4.3	Two-Dimensional Hosts	211
4.4.4	Cyclophane Hosts	219
4.5	Guanidinium-Based Receptors	220
4.6	Organometallic Receptors	225
4.7	Neutral Receptors	231
4.7.1	Zwitterions	233
4.7.2	Hydrogen Bonding Hosts	234
4.8	Hydride Sponge and Other Lewis Acid Chelates	236
4.9	Anticrowns	240
4.10	Coordination Interactions	244
	Study Problems	248
	Thought Experiments	249
	References	249
5	Binding of Neutral Molecules	251
5.1	Inorganic Solid-State Clathrate Compounds	252
5.1.1	Clathrate Hydrates	252
5.1.2	Zeolites	258
5.1.3	Layered Solids and Intercalates	266
5.1.4	Hoffman Inclusion Compounds and Werner Clathrates	271
5.2	Solid-State Clathrates of Organic Hosts	272
5.2.1	Urea Clathrates	272
5.2.2	Other Channel Clathrates: Trimesic Acid, Helical Tubulands and Perhydrotriphenylene	278
5.2.3	Hydroquinone, Phenol and Dianin's Compound: The Hexahost Strategy	286
5.2.4	Tri- <i>o</i> -thymotide	290
5.2.5	Cyclotrimeratrylene	295
5.2.6	Tetraphenylene	300

5.3	Intracavity Complexes of Neutral Molecules: Solution and Solid-State Binding	304
5.3.1	Intrinsic Curvature: Guest Binding by Cavitands	304
5.3.2	Cyclodextrins	321
5.3.3	Molecular Clefts and Tweezers	334
5.3.4	Cyclophane Hosts	337
5.3.5	Constructing a Solution Host from Clathrate-Forming Building Blocks: The Cryptophanes	354
5.3.6	Covalent Cavities: Carcerands and Hemicarcerands	363
5.4	Supramolecular Chemistry of the Fullerenes	374
5.4.1	Fullerenes as Guests	375
5.4.2	Fullerenes as Hosts	377
5.4.3	Fullerenes as Superconducting Intercalation Compounds	380
	Study Problems	383
	Thought Experiment	383
	References	384
6	Crystal Engineering	389
6.1	Concepts	390
6.1.1	Introduction	390
6.1.2	Intermolecular Interactions	392
6.1.3	The Special Role of Hydrogen Bonding	392
6.1.4	Graph Set Analysis	397
6.1.5	Crystal Growth	401
6.1.6	Crystal Deconstruction	409
6.1.7	Crystal Engineering Design Strategies	409
6.2	Crystal Structure Prediction	413
6.2.1	Computational Methods	413
6.2.2	Etter's Rules	414
6.3	The Cambridge Crystallographic Structural Database	419
6.4	Crystal Engineering of Diamondoid Lattices	423

6.5	Crystal Engineering with Hydrogen Bonds	428
6.5.1	Carboxylic Acid Dimers	429
6.5.2	Amides	429
6.5.3	Alcohols	431
6.5.4	Alcohol–Amine Co-crystals	432
6.5.5	Amine–Amine Co-crystals	432
6.6	Hydrogen Bonds to Carbon Monoxide	435
6.7	Weak Hydrogen Bonds	436
6.8	Hydrogen Bonds to Metals and Metal Hydrides	440
6.8.1	Direct Interactions to the Metal	440
6.8.2	Interactions of Metal Hydrides	441
6.9	π–π Stacking	443
6.10	Other Interactions	444
6.11	Awkward Shapes and Mismatch	446
6.11.1	Wheel and Axle Hosts	446
6.11.2	Mismatched Partners	447
6.12	Coordination Polymers	449
6.13	Biomimetic Structures	453
6.14	Mixed Crystals: Hourglass Inclusions	458
	Study Problems	461
	Thought Experiment	463
	References	463
7	Templates and Self-Assembly	463
7.1	Introduction	464
7.1.1	Scope and Goals	464
7.1.2	Terminology	465

7.2	Biochemical Self-Assembly	467
7.2.1	The Tobacco Mosaic Virus	467
7.2.2	Strict Self-Assembly	468
7.2.3	Self-Assembly with Covalent Modification	470
7.3	Self-Assembly in Synthetic Systems: Kinetic and Thermodynamic Considerations	472
7.3.1	Template Effects in Synthesis	472
7.3.2	A Thermodynamic Model: Self-Assembly of Zinc Porphyrin Complexes	475
7.4	Self-Assembling Coordination Compounds	479
7.4.1	Design Principles	479
7.4.2	The Supramolecular Cube	480
7.4.3	Molecular Squares and Boxes	483
7.4.4	Self-Assembly of Metal Arrays	492
7.5	Self-Assembly of Closed Complexes by Hydrogen Bonding	498
7.5.1	Tennis Balls and Softballs	498
7.5.2	Giant Self-Assembling Capsules	503
7.5.3	Rosettes	509
7.6	Catenanes and Rotaxanes	511
7.6.1	Overview	511
7.6.2	Statistical Approaches to Catenanes and Rotaxanes	514
7.6.3	Pseudorotaxanes	517
7.6.4	Rotaxanes	518
7.6.5	Catenanes from π - π Stacking Interactions	520
7.6.6	Auxiliary Linkage Approaches to Catenane Synthesis	530
7.7	Helicates	541
7.7.1	Introduction	541
7.7.2	Synthetic Considerations	544
7.7.3	[4 + 4] Helicates	546
7.7.4	[6 + 6] Helicates	548
7.7.5	Self-Recognition and Positive Cooperativity	550
7.7.6	Nanocycles	554
7.7.7	Hydrogen-Bonded Helices	556
7.8	Molecular Knots	559
7.9	Catalytic and Self-Replicating Systems	565
	Study Problems	570

Thought Experiment	571

8 Molecular Devices 573

8.1 Introduction 574

8.1.1	Philosophy of Molecular Devices	574
8.1.2	When is a Device Supramolecular?	575

8.2 Supramolecular Photochemistry 575

8.2.1	Photochemical Fundamentals	577
8.2.2	Bimetallic Systems and Mixed Valence	580
8.2.3	Bipyridine and Friends	581
8.2.4	Bipyridyl-Based Photo- and Electrochemical Devices	583
8.2.5	Light-Conversion Devices	589
8.2.6	Noncovalently Bonded Systems	590

8.3 Information and Signals: Semiochemistry 592

8.3.1	Photochemical Sensors	593
8.3.2	Fluorophores	597
8.3.3	Electrochemical Sensors	600

8.4 Molecular Electronic Devices: Switches, Wires and Rectifiers 604

8.4.1	Molecular Wires	605
8.4.2	Molecular Rectifiers	609
8.4.3	The 1,2-Dithienylethene System as a Switch	611
8.4.4	Electroswitchable Luminescence	613
8.4.5	Switchable Binding	614
8.4.6	Allosteric Switches	615

8.5 Machines Based on Catenanes and Rotaxanes 616

8.6 Nonlinear Optical Materials 623

8.6.1	Origins of Nonlinear Optical Effects	623
8.6.2	Second-Order Nonlinear Optical Materials	626
8.6.3	Third Harmonic Generation Nonlinear Optical Materials	629

8.7	Dendrimers	630
8.7.1	Preparation and Properties of Dendrimers	632
8.7.2	Dendrimer Host–Guest Chemistry	634
8.7.3	Dendritic Photochemical Devices	636
	Study Problems	638
	References	640
9	Biological Mimics	641
9.1	Introduction	642
9.1.1	Supramolecular Biochemistry	642
9.1.2	Characteristics of Biological Models	643
9.2	Characteristics of Enzymes	645
9.2.1	Definition and Structure	645
9.2.2	Mechanism of Enzymatic Catalysis	646
9.3	Cyclodextrins as Enzyme Mimics	649
9.3.1	Enzyme Modelling Using an Artificial Host Framework	650
9.3.2	Cyclodextrins as Esterase Mimics	652
9.3.3	Functionalised Cyclodextrins	653
9.4	Corands as ATPase Mimics	656
9.5	Cation-Binding Hosts as Transacylase Mimics	660
9.5.1	Chiral Corands	660
9.5.2	A Structure and Function Mimic	662
9.6	Metallobiosites	664
9.6.1	Haemocyanin Models	666
9.6.2	Zinc-Containing Enzymes	668
9.7	Haem Analogues	669
9.7.1	Models of Oxygen Uptake and Transport	669
9.7.2	Cytochrome P-450 Models	676
9.8	Vitamin B₁₂ Models	681
	Study Problems	683

Thought Experiment 683
