

Contents

1	A Primer on Feller Semigroups and Feller Processes	1
1.1	Feller Semigroups	2
1.2	From Feller Processes to Feller Semigroups—and Back	13
1.3	Resolvents	16
1.4	Generators of Feller Semigroups and Processes	17
1.5	Feller Semigroups and L^p -Spaces	28
2	Feller Generators and Symbols	31
2.1	Orientation: Convolution Semigroups and Lévy Processes	32
2.2	Positive and Negative Definite Functions	41
2.3	Generator and Symbol of a Feller Semigroup on $\mathbb{R}^d$	46
2.4	The Symbol of a Stochastic Process	57
2.5	The Semimartingale Connection	63
3	Construction of Feller Processes	69
3.1	The Hille–Yosida Construction	70
3.2	Stochastic Differential Equations (SDEs)	74
3.3	Dirichlet Forms	79
3.4	Evolution Equations	86
3.5	The Martingale Problem	89
3.6	Unbounded Coefficients	96
4	Transformations of Feller Processes	99
4.1	Random Time Changes	99
4.2	Subordination in the Sense of Bochner	102
4.3	Perturbations	106
4.4	Feynman–Kac Semigroups	108
5	Sample Path Properties	111
5.1	Probability Estimates	112
5.2	Hausdorff Dimension and Indices	124
5.3	Asymptotic Behaviour of the Sample Paths	128

5.4 The Strong Variation of the Sample Paths 132

5.5 Besov Regularity of Feller Processes 135

6 Global Properties 141

6.1 Functional Inequalities 141

6.2 Coupling Methods 147

6.3 Transience and Recurrence 160

7 Approximation 167

7.1 Constructive Approximation 169

7.2 Simulation 171

8 Open Problems 177
