Preface and acknowledgements.....	V
--	----------

Introduction	XIII
---------------------------	-------------

Ralf Antes, Bernd Hansjürgens, Peter Letmathe

Part A – Institutional design

Companies and regulators in emissions trading programs.....	3
--	----------

Joseph Kruger

1 Introduction.....	4
2 Industry's role: strategic planner and entrepreneur.....	5
3 Role of regulators.....	11
4 Industry attitudes toward US program administrators	14
5 The European Union Emissions Trading System	14
6 Conclusions.....	16

Business and emissions trading from a public choice perspective – waiting for a new paradigm to emerge	21
---	-----------

Heinrich Tschochohei, Jan Zöckler

1 Introduction.....	22
2 Emissions trading in economic theory	22
3 The contribution of Public Choice Theory	24
4 The ETS and its implementation in Germany.....	27
5 Outlook	31

Product-based benchmarks as a basis for the rational use of energy and corporate sustainability	37
--	-----------

Anja Paukshat, Martin Kruska

1 Introduction.....	38
2 Allocation of emission allowances	38
3 Alternative allocation method.....	41
4 Results for cement production	42
5 Conclusion	47

Double Auction experiments and their relevance for emissions trading	49
<i>Bodo Sturm</i>	
1 Introduction	50
2 Previous results and motivation for new experiments	51
3 Experiment.....	53
4 Discussion.....	64
5 Conclusions	65
 The influence of the allocation method on market liquidity, volatility and firms' investment decisions	 69
<i>Frank Gagelmann</i>	
1 Introduction	70
2 Different methods of primary allocation and efficiency	71
3 Liquidity and volatility: a model describing their interdependence.....	72
4 A conceptual framework.....	76
5 Primary allocation and allowance market liquidity	77
6 Firms' decisions under allowance price uncertainty	82
7 Conclusions and further research questions.....	86
 Part B – Investment and corporate decision	
 Studying the effects of CO₂ emissions trading on the electricity market: A multi-agent-based approach	 91
<i>Anke Weidlich, Frank Sensfuß, Massimo Genoese, Daniel Veit</i>	
1 Introduction	92
2 The multi-agent approach	92
3 A multi-agent electricity and emissions market simulation model	94
4 Expected results.....	99
5 Summary and outlook.....	99
 Real options analysis for renewable energy technologies in a GHG emissions trading environment.....	 103
<i>Joseph Sarkis, Maurry Tamarkin</i>	
1 Introduction	104
2 Market-based mechanisms and cap and trade programs.....	105
3 Renewable energy strategies and photovoltaic energy sources	109
4 Photovoltaic technology and costs.....	110
5 Investment appraisal using real options.....	112
6 Real options example applied to PV technology	113
7 Conclusions and future research	117

The European electricity market – impact of emissions trading.....	121
<i>Wolf Fichtner</i>	
1 Introduction.....	122
2 Demand for new power plants in Germany and Europe	122
3 A model to analyse the implications of emissions trading for the electricity sector	123
4 Model results	126
5 Assumptions of the analysis.....	129
6 Conclusions.....	130
 A case study on risk and return implications of emissions trading in power generation investments	 133
<i>Harri Laurikka</i>	
1 Introduction.....	134
2 Risk Management in power generation investments.....	135
3 Model.....	137
4 Data.....	140
5 Results	143
6 Conclusions.....	144
 Investment decisions and emissions trading.....	 149
<i>Heinz Eckart Klingelhöfer</i>	
1 Introduction.....	150
2 Methodology – the theoretical framework for valuation under uncertainty.....	151
3 Derivation of the payments from production theory and production planning.....	152
4 Valuation of investments in environmental protection technology with regard to tradable permits.....	154
5 Conclusion	163
 Part C – Corporate strategies	
 Emissions trading and Corporate Sustainability Management.....	 167
<i>Charlotte Hesselbarth</i>	
1 Introduction.....	168
2 Sustainability and Corporate Sustainability Management	169
3 Impact of emissions trading on Corporate Sustainability Management.....	171
4 Conclusion and outlook	179

**Links of corporate energy management strategies in Europe
with the European Union emissions trading system and
environmental management systems 183**
Marcus Wagner

1 Introduction	184
2 Corporate energy management strategies and links to EMS, the EU ETS and climate policy	184
3 Data and research method.....	187
4 Estimation results	188
5 Conclusions and implications	191

The implementation of emissions trading in companies 193
Jonatan Pinkse

1 Introduction	194
2 The politics of implementing emissions trading.....	195
3 Methodology and data	197
4 The advancement of emissions trading in companies.....	198
5 Conclusion	206

**Corporate strategy and the Kyoto mechanisms –
institutional and transaction cost perspectives 209**
Fredrik von Malmborg

1 Introduction	210
2 Theoretical perspectives on corporate behaviour.....	211
3 Corporate views on the project mechanisms	216
4 Corporate strategy related to Kyoto project mechanisms	220
5 Conclusions	230

**Understanding business participation in UK emissions trading:
dimensions of choice and influences on market development 235**
Michael Nye

1 Introduction	236
2 Emissions trading schemes and emissions markets.....	236
3 Emissions trading as a multi-dimensional instrument	238
4 Resources and capacities for participation in emissions trading.....	239
5 Incentive seeking behaviour?.....	241
6 Resources, capacities and market development in the UK ETS	243
7 Capacities for day to day management of emissions trading.....	243
8 Fears of non-compliance.....	244
9 Conclusions and discussion	246

Corporate response to emissions trading in Lithuania	251
<i>Rūta Bubnienė</i>	
1 Introduction.....	252
2 Emissions trading in Lithuania	253
3 Companies' responses to emissions trading.....	256
4 Conclusions.....	261
The authors	265
